Data was compiled regarding past and present uses, storage and disposal of hazardous materials at Lawrence Livermore National Laboratory (LLNL), Livermore, California and antecedent site activities. Thirty-two monitor wells were installed at and near LLNL to: (1) provide baseline hydrogeologic data, (2) begin defining the vertical and lateral extent of VOCs in ground water at and west of LLNL and (3) evaluate potential sources of VOCs in ground water at LLNL. Ground water samples were collected and analyzed for VOCs from all new and previously installed LLNL monitor wells and selected private and Alameda County Flood Control and Water Conservation District, Zone 7 wells. Aquifer tests were performed in selected wells to: (1) evaluate vertical hydraulic communication between adjacent shallow and deeper wells, (2) estimate the transmissivity and hydraulic conductivity of water-bearing sediments, (3) estimate ground water flow rates, and (4) assess well efficiency. A technique was developed to collect uncontaminated saturated soil samples from several water-bearing zones in a single borehole. Five wells and four borings were also drilled in the Building 403 area to investigate the presence of fuel hydrocarbons in soil and ground water.

12329 **(UCRL—15835-Vol.2) Ground water investigation at Lawrence Livermore National Laboratory, Livermore, California: Volume two, Appendixes: Annual report for fiscal year 1985.** (Weiss Associates, Berkeley, CA (USA); Lawrence Livermore National Lab., CA (USA)). Dec 1985. Contract W-7405-ENG-48. 370p. NTIS, PC A16/MF A01; 1; GPO Dep. File Number DE87003892.

This volume contains the following appendices: (1) California state well numbering system; (2) well logs; (3) ground water sampling protocol; (4) water level data; (5) well destruction details, wells 11R3, 11R4, and 11R81; (6) aquifer test procedures; (7) results of VOC analyses of saturated soil; (8) results of VOC analyses of ground water; and (9) action levels recommended by DOHS. (ACR)

12330 **(UCRL—15854) Testing and sampling of existing wells in the vicinity of Lawrence Livermore National Laboratory and Sandia National Laboratories, Livermore, California: Final report.** (Hydro Geo Chem., Inc., Tucson, AZ (USA); Lawrence Livermore National Lab., CA (USA)). 10 Jun 1984. Contract W-7405-ENG-48. 94p. NTIS, PC A05. File Number DE87003883.

Hydraulic testing and sampling of seven existing water wells was performed in the vicinity of Lawrence Livermore National Laboratory and Sandia National Laboratories. These tests were performed in support of an ongoing investigation of trichloroethylene (TCE) and perchloroethylene (PCE) groundwater contamination. Much of the hydraulic testing and sampling was performed using a straddle packer/submersible pump assembly which allowed isolating and pumping discrete producing zones in multiply completed wells. This testing procedure was specially designed for this investigation to define the vertical distribution of contaminants.

12331 **(UCRL—15856) Remedial action plan for gasoline leak near Building 403, Lawrence Livermore National Laboratory, Livermore, California.** (Lawrence Livermore National Lab., CA (USA); O.H. Materials Co., Findlay, OH (USA)). 21 Oct 1985. Contract W-7405-ENG-48. 22p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003885.

Remedial requirements and alternatives associated with the leakage of gasoline in the vicinity of Building 403 at the Lawrence Livermore National Laboratory (LLNL) in Livermore, California were evaluated. Subsurface investigations included drilling borings, sampling soils, installing observation wells, sampling ground water from the newly installed and existing wells, chemically analyzing the soil and water samples, performing slug tests, and conducting a surface geophysical and a biodegradation laboratory study. At the same time, LLNL subcontractors conducted geophysical logging of the boreholes. The objectives were to summarize the site conditions, present the logic by which remedial alternatives were evaluated, and present a conceptual plan for remedial action. The conceptual action plan presents three alternative levels of cleanup: a virtually complete removal of contaminants, a intermediate approach intended to remove most of the contaminants, and a no-action/minimal action approach.

12332 **(CONF-870219—2) An analysis of groundwater contamination from the operation of a 6-GeV continuous electron beam accelerator.** Lee, D.W. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002413.

From Midyear topical symposium of the Health Physics Society: health physics of radiation-producing machines; Reno, NV, USA (8 Feb 1987).

The potential contamination groundwater in the vicinity of a beam dump associated with a 6-GeV continuous electron beam accelerator has been analyzed considering the site hydrology. The potential contamination arising from photoneutron activation of soil and the subsequent leaching, transport, and decay of tritium are examined. The analysis accounts for dilution from groundwater transport and infiltration of precipitation. The results demonstrate that dilution reduces the concentration of tritium in the groundwter by one order of magnitude from a simple production and transport model that does not consider the effects of dilution. 5 refs., 2 figs., 2 tabs.

12333 **(DOE/CH/10255—1) An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986.** Wilson, B.L. (Texas Southern Univ., Houston (USA). Dept. of Chemistry). 1986. Contract FG02-86CH10255. 17p. NTIS, PC A02. File Number DE87003418.

The main objectives of this project are the following: to investigate the following trace metals which are found in the aqueous environment: Ba, Cd, Co, Cr, Cu, Fe, Hg, Mn, Mo, Ni, Pb, Ti, V, and Zn; and to study the natural radionuclides: ^{40}K, ^{210}Pb, ^{228}Th, ^{228}Ra, ^{235}U, and ^{238}U which may be released in the fly ash of coal fired power plants or as nuclear weapon waste products.

12335 (NIRS-RSD—63, pp 22-24) **Strontium-90 and cesium-137 in sea fish (from June 1982 to December 1982). Environmental and dietary materials.** Dec 1982. NTIS (US Sales Only), PC A03/MF A01. File Number DE86780546.

In Radioactivity survey data in Japan.

Strontium-90 and cesium-137 in sea fish (from June to December 1982) were determined. Fish was collected from 22 sampling locations. Only the edible part was used in case of larger sized fish, and the whole part was used in case of smaller ones. The results are shown in a table.

5204 Thermal Effluents Monitoring And Transport

12336 (DP—1730) Chlorination/dechlorination studies relating to proposed cooling towers for K and C reactors. Wilde, E.W. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). Dec 1986. Contract AC09-76SR00001. 67p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87003779.

The purpose of this study was to obtain data on the chlorination and dechlorination of the cooling water that is pumped through the C- and K-Reactor heat exchangers. More specifically, data were obtained on: (1) chlorine demand and dissipation rates; (2) the effectiveness of sodium sulfite as a dechlorinating agent; (3) the toxicity of chlorination and dechlorination on indigenous fish; (4) the effects of dechlorination on water quality; and (5) the comparative precision of three conventional residual chlorine detection methods. The study results strongly indicate that implementation of present plans for chlorination and dechlorination (with sodium sulfite) of SRP reactor cooling towers will cause no significant adverse environmental impacts and should not result in problems in meeting future regulatory guidelines for TRC. 9 figs., 11 tabs.

12337 (DOE/BP/61748—1) Juvenile salmonid monitoring at Rock Island Dam bypass sampler: Annual report. Fielder, P.C.; Peven, C.M. (Public Utility District No. 1 of Chelan County, Wenatchee, WA (USA)). Oct 1986. Contract AI79-86BP61748. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003080.

Downstream migrating salmon (Oncorhynchus spp.) and steelhead (Salmo gairdneri) smolts were monitored at the Rock Island Dam bypass trap from 1 April - 31 August, 1986. Data collected included: (1) number of fish caught per species; (2) number of branded fish caught per species; (3) daily average riverflow; (4) daily average powerhouse No. 1 and No. 2 flows; and (5) daily average spill. These data were transmitted to, and used by, the Fish Passage Center to manage a "water budget" of allocated upstream water storage to augment river flows to improve survival of downstream migrating salmonids. The Rock Island Dam trapping facility collected 176,188 downstream migrating salmonids in 1986. Collected fish included 901 chinook salmon (Oncorhynchus tshawytscha) and 1502 steelhead which had been freeze branded (to determine migration and survival rates) and 2290 chinook and 22,506 steelhead with clipped adipose fins. The middle 80% (between 10% and 90%) of the 1986 spring migration (excluding sub-yearling chinooks) passed Rock Island Dam during a 32 day period, 29 April - 30 May. Passage rates of hatchery released chinook and steelhead smolts and downstream migration timing of all salmonids are presented.

12338 (LA—10835-PR) Water supply at Los Alamos during 1985: Progress report. Purtymun, W.D.; Becker, N.M.; Maes, M.N. (Los Alamos National Lab., NM (USA)). Oct 1986. Contract W-7405-ENG-36. 35p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003800.

Well field operations during 1985 were satisfactory with municipal and industrial supplies consisting of 1587 x 10^6 gal from wells in three well fields and 37 x 10^6 gal from the gallery in Water Canyon. About 2.8 x 10^6 gal of water from Guaje Reservoir and 0.9 x 10^6 gal from Los Alamos Reservoir were used for irrigation; thus the total water usage in 1985 was about 1628 x 10^6 gal. Primary and secondary chemical quality of water in the distribution system is in compliance with federal regulations.

12339 (ORNL/ESH—1/V21) Resource Management Plan for the Oak Ridge Reservation: Volume 21, Water Conservation Plan for the Oak Ridge Reservation. Kasten, J.L. (Oak Ridge National Lab., TN (USA)). Nov 1986. Contract AC05-84OR21400. 45p. NTIS, PC A03/MF A01. File Number DE87004049.

This Water Conservation Plan covers facilities within the ORR including the Y-12 Plant, Oak Ridge National Laboratory (ORNL), Oak Ridge Gaseous Diffusion Plant (ORGDP), the Industrial Park, the Scarboro Facility, Rust Engineering, and the Clark Center Recreation Area. The water balance for the ORR is summarized and plans for optimizing water usage and protecting water quality are included. Temporary measures to curtail water usage in the event of a drought are also summarized.

12340 (TVA/ONRED/AWR—86/58) Fishery status assessment of Tims Ford Reservoir with management recommendations. Lowery, D.R.; Taylor, F.H. (Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources). Apr 1986. 53p. NTIS, PC A04/MF A01. File Number DE87900333.

Fishery information was collected on Tims Ford Reservoir to determine the status of the fishery resource as an indictor of the biological health of these reservoirs, and to formulate management recommendations for improving the status of the biological resource that can be implemented by TVA and/or cooperating agencies.

12341 (TVA/PUB—87/5) John Sevier Aquatic Biological Program: Paddlefish stocking and assessment report for 1986. Pasch, R.W. (Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources). Jun 1986. 6p. NTIS, PC A02/MF A01. File Number DE87900330.

In January, 1986, approximately 10,700 yearling paddlefish were released in Cherokee Reservoir. Initial mortality was apparently low, with fewer than 100 stocked paddlefish found dead in the vicinity of the release site. Subsequent sampling has yielded little data on distribution and abundance of paddlefish in Cherokee Reservoir. Observations suggest young paddlefish dispersed widely and may not have experienced heavy mortality. (ACR)

12342 (TVA/PUB—87/6) The biological effects of bank stabilization structures on fish and benthic macroinvertebrates in Fort Loudoun Lake: Final report. Hylton, R.E.; Spencer, M.D.; Bettoli, P.W. (ed.). (Tennessee Technological Univ., Cookeville (USA). Tennessee Cooperative Fishery Research Unit). Jul 1986. 167p. NTIS, PC A08/MF A01. File Number DE87900335.

Fish and benthic macroinvertebrate populations in the littoral zone of Fort Loudoun Lake were sampled in 1982 to determine the impact of shoreline modification structures on the abundance and diversity of these organisms. Fish populations were collected along natural (undisturbed) shoreline areas, retaining walls, and riprap areas by electrofishing and shoreline rotenoning, while benthos were collected at similar areas using artificial substrate samplers and a kick net. Riprap areas typically yielded the most fish in electrofishing samples, while natural areas usually had the most fish in the rotenone samples. Retaining wall areas usually yielded the fewest fish in both sampling schemes.

5206 Regulations

12343 (CONF-861066—1) Renovation of dilute process wastewaters: Mini-pilot plant evaluation of an integrated process system to meet the Clean Water Act's heavy-metal and organic treatment requirements at Oak Ridge National Laboratory. Begovich, J.M.; Brown, C.H. Jr.; Villiers-Fisher, J.F.; Thompson, W.T.; Patrick, G.C.; Snider, E.H. (Oak Ridge National Lab., TN (USA); Martin Marietta Energy Systems, Inc., Oak Ridge, TN (USA); Engineering-Science, Inc., Atlanta, GA (USA)). 1986. Contract AC05-84OR21400. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002403.

From 47. international water conference; Pittsburgh, PA, USA (27 Oct 1986).

The purpose of the facility was to simulate the treatment the ORNL nonradiological wastewaters will receive in the NRWT plant. In the MPP, all wastewaters, with the exception of those not containing heavy metals (i.e., Cd, Cr, Cu, Fe, Pb, Hg, Ni, Ag, and Zn), flowed through an API-type separator. The criteria metals (except for mercury) were removed in the reactor/clarifier (R/C) as hydroxide precipitates using either calcium hydroxide (lime) and sodium carbonate (soda ash) or sodium hydroxide (caustic). Over-

flow from the precipitator was then treated by dual-media (sand and anthracite) filters and adjusted to a pH of 7. Wastewaters that had been pretreated by ion exchange for radionuclide removal bypassed the first four unit operations and were combined with the other wastewaters prior to air stripping. Volatile organics were removed by air stripping in a packed tower, while heavy (nonvolatile) organics and mercury were removed in three serially connected GAC columns. An ion-exchange (IX) column was operated in parallel with the R/C in order to evaluate the long-term performance of a chelating, heavy-metal-selective resin. In general, results of the MPP studies correlated well with those of the bench-scale treatability studies. The remainder of this paper details: the results of selected bench-scale treatability studies; spiking of feed streams; the MPP flowsheet and description of equipment; the results from the two MPP campaigns; and finally, the conclusions formulated by this treatability work.

12344 **(DOE/EV/05888—8) [Impact of energy related pollutants on chromosome structure]: Progress report.** Rill, R.L. (Florida State Univ., Tallahassee (USA). Inst. of Molecular Biophysics). [1986]. Contract AS05-78EV05888. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003917.

Studies of the structure of nucleosome cores using chymotrypsin as a probe of hydrophobic residues showed that only leu-20 of H3 was readily accessible. Primary sites of cleavage of H2a, H2b, and H4 were identified. Chymotrypsin removal of specific histone termini showed that removal of the amino-terminal plus the carboxy-terminal 13 residues of H2a caused little unfolding. Using carbon-13 NMR spectroscopic, about 10% of histone amino acid residues were found to be in termini that are highly mobile. The major mobile segments were amino terminal regions of H3 and H2a, plus a carboxy-terminal region of H2a. The histone variants and developmental changes during embryogenesis of sea urchin were characterized. The early histone gene organization in L. variegatus was characterized, a genomic library was cloned in lambda phage, and several histone gene clones were selected. The nucleosome core length DNA forms crystalline phases at physiological concentrations. Microscopic and NMR spectroscopic methods were used to identify crystalline phases and to establish phase diagrams for transitions between phases as functions of DNA concentration and temperature. The sequence specificities of binding of several polycyclic aromatic chemicals to early H3 and H2a genes were examined. Chemicals studied were the bis-(o-phenanthroline) Cu(I) complex, AAAF, benzopyrene dihydrodiol epoxide, methylene blue, and acridine orange A preliminary map of binding sites of CuOP, AAAF and BPDE in and near the H3 gene showed that several sequence regions were bound preferentially by two or more of these chemicals. CuOP appeared to exhibit the most specificity. 80 refs., 4 figs.

12345 **Transport in Rhizobium and its significance to the legume symbiosis.** Dilworth, M.J.; Glenn, A.R. (Murdoch Univ., Australia). pp 53-61 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

An effectively nodulating rhizobial strain lives both as a saprophyte in soil and as a symbiotic partner with a legume. In order to compete and persist in soil rhizobia have to obtain nutrients from generally very dilute soil solutions. In the nodule the bacteroid needs to take up such organic and inorganic materials as are presented to it by the plant, in order to grow, divide and fix N_2. The interface with both the soil and the plant cytoplasm is the bacterial cell surface which regulates the import and export of materials. Such exchanges, while important to an understanding of rhizobial behavior, have thus far received relatively little attention. Transport in rhizobia appears to be active and dependent on an energized membrane. However, while reports of transport of particular molecules being sensitive to carbonyl cyanide m-chlorophenylhydrazone (CCCP), 2,4-dinitrophenol, cyanide or azide are common, there is little evidence showing Δ pH or Δ psi measurements associated with the movement of organic molecules. Currently there are no data on the stoichiometry of the transport of particular organic compounds with the movement of other ions like H^+ or Na^+. 48 references, 3 tables.

12346 **Genes used in Rhizobium-plant interactions.** Long, S.R.; Jacobs, T.W.; Egelhoff, T.T.; Tu, J.; Fisher, R. (Stanford Univ., CA). pp 74-82 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Genes of both Rhizobium and its plant host are required for the formation of nodules. The authors have a preliminary knowledge of where the bacterial genes are located, and studies so far have shown that some of the genes are useful for the invasion of more than one host plant. These genes, and a segment of DNA which appears to influence host determination, are linked to the nitrogenase genes on the Rhizobium meliloti megaplasmid. Analyses of RNA indicate that the common nod gene loci are feebly expressed, if at all, in free-living cells, raising the possibility that regulation of nod gene expression may be an important feature of nodule development. The advent of molecular genetic techniques in Rhizobium research should be of assistance to other areas such as surface biochemistry, if the authors can provide strains with elevated expression of the gene products used in nodulation. This combination of approaches should help lead research on Rhizobium-plant interactions towards the level of understanding which has been achieved in nitrogen fixation biochemistry. 23 references, 2 figures.

12347 **Forty-nine years on the trail of nitrogenase.** Burris, R.H. (Univ. of Wisconsin, Madison). pp 101-110 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The biochemistry of nitrogenase is presented with emphasis of the role of nitrogenase in nitrogen fixation. Included in the discussion are enzyme activity, purification, substrates for nitrogenase, as well as a variety of inhibitors. 59 references, 1 figure.

12348 **Comparison of the two hydrogenases of Clostridium pasteurianum.** Mortenson, L.E.; Adams, M.W.W. (Exxon Research and Engineering Co., Clinton, NJ). pp 111-120 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

This paper describes some of the properties of the two hydrogenases (I and II) of C. pasteurianum, I functioning in H_2 oxidation and H^+ reduction and II functioning primarily in H_2 oxidation. II has two 4Fe-4S centers whereas I has three. A comparison of the properties of I and II, i.e., spectral properties in various oxidation reduction states, kinetic properties, chemical properties and response to changing H^+ concentration, have suggested that the difference between the two may reflect the presence of a specific proton donating site in I that is missing in II. A 4Fe-4S center present in I but not II may be involved in proton availability and proton transfer to the active site. 11 references, 5 figures, 2 tables.

12349 **H_2-oxidizing hydrogenases of aerobic N_2-fixing microorganisms.** Arp, D.J. (Univ. of California, Riverside). pp 121-131 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

A close relationship between N_2 fixation and H_7 metabolism has been recognized for many years. Nitrogenase catalyzes the reduction of protons to H_2 simultaneous with the reduction of N_2 to NH_3. Exploitation of hydrogenases as a mechanism for improving the efficiency of biological N_2 fixation will require detailed knowledge of the physiology, biochemistry and genetics of H_2 metabolism in the microorganisms responsible. In addition, the role of the plant and the influence of the environment must also be defined. The purpose of this manuscript will be to review the literature relevant to the enzymology of hydrogenases from aerobic N_2-fixing microorganisms. 66 references, 2 tables.

12350 **Characterization of molybdopterin, the organic portion of the molybdenum cofactor.** Hageman, R.V.; Rajagopalan, K.V. (Duke Univ., Durham, NC). pp 133-141 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

A procedure is described for the separation of the molybdenum cofactor from protein, and a partial purification of the active material. The final product can be obtained in the absence of reducing agents or organic compounds, and is stable for weeks at -70°C, thus facilitating characterization. This active material is shown to contain a pterin nucleus, an organically bound phosphate residue and at least one, probably two, sulfurs, in the form of thiols. Based on comparison to the oxidized pterins isolated from molybdoenzymes, this conclusively establishes the active cofactor to be a substituted pterin. In spite of references in the literature to a polypeptide constituent of the cofactor, attempts to identify a small peptide in the isolated, active cofactor gave negative results. 12 references, 5 tables.

12351 **Biochemistry of higher plant nitrate reductase.** Campbell, W.H. (State Univ. of New York, NY). pp 143-151 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Higher plants acquire most of their nitrogen by taking nitrate, reducing it to ammonium and then fixing the ammonium into amino and amide nitrogen. The reduction of nitrate to ammonium is a two step process with the first step catalyzed by pyridine nucleotide nitrate reductase: and the second step catalyzed by ferredoxin nitrite reductase in the chloroplast. The fixation of ammonium takes place mostly in the chloroplast and occurs via the action of glutamine synthetase, which catalyzes the ATP-dependent amidination of glutamate to form glutamine. While the bulk of the glutamine amide-N is transferred to 2-oxoglutaeate to form glutamate in a ferredoxin dependent reaction catalyzed by glutamate synthase, glutamine can also donate its amid-N in several other reactions or even be totally consumed itself in some biosynthetic reactions. In the green leaf cells of higher plants, photorespiration is also a source of ammonium which is produced when two glycines condense to form serine, carbon dioxide and ammonium. Since in most cases the flux of ammonium from photorespiration is several fold greater than the flux from nitrate reduction, glutamine synthetase must fix ammonium into glutamine at a much higher rate than nitrate is reduced to ammonium if the green parts of the plant are to have net accumulation of reduced N. Since nitrate reductase is present in plant tissues with an activity capacity usually about ten times greater than nitrate reductase, the first step of the pathway (i.e. reduction of nitrate to nitrite) is the rate limiting step in assimilation of nitrate and appears to be the key regulatory site. Thus, a great deal of effort has been expended over the past thirty years in the study of the physiology and biochemistry of higher plant nitrate reductase. 26 references, 1 figure.

12352 **Unique, one-step, double isomerization (2E, 4Z $\rightleftharpoons$ 2Z, 4E) of 6-oxo-2,4-heptadienoic acid catalyzed by maleylacetone cis-trans isomerase.** Feliu, A.L.; Smith, K.J.; Seltzer, S. (Brookhaven National Lab., Upton, NY). *Journal of the American Chemical Society;* **106**: 3046-2047(1984).

In order to examine the structural requirements of the enzyme, maleylacetone cis-trans isomerase, the enzyme, 6-oxo-2,4-heptadienoic acids, and its methyl esters were synthesized to provide the four possible cis-trans isomeric skeletons. The compounds are reported. The reported results suggest that the enzyme binds maleylacetone in the region of the 6-oxo function as well as by its carboxyl group. 6 references, 1 figure.

12354 **Transfer of plasmids to an antibiotic-sensitive mutant of Zymomonas mobilis.** Buchholz, S.E.; Eveleigh, D.E. (Rutgers Univ., New Brunswick, NJ). *Applied and Environmental Microbiology;* **52**: No. 2, 366-370(Aug 1986).

Wild-type strains of Zymomonas mobilis exhibit multiple antibiotic resistance and thus restrict the use of many broad-host-range plasmids in them as cloning vehicles. Antibiotic-sensitive mutants of Z. mobilis were isolated and used as hosts for the conjugal transfer of broad-host-range plasmids from Escherichia coli. Such antibiotic-sensitive strains can facilitate the application of broad-host-range plasmids to the study of Z. mobilis.

12355 **Structure of a conjugative element in Streptococcus pneumoniae.** Vijayakumar, M.N.; Priebe, S.D.; Guild, W.R. (Duke Univ., Durham, NC). *Journal of Bacteriology;* **166**: No. 3, 978-984(Jun 1986). Contract AS05-76EV03941.

The authors have cloned and mapped a 69-kilobase (kb) region of the chromosome of Streptococcus pneumoniae DP1322, which carries the conjugative Omega(cat-tet) insertion from S. pneumoniae BM6001. This element proved to be 65.5 kb in size. Location of the junctions was facilitated by cloning a preferred target region from the wild-type strain Rx1 recipient genome. This target site was preferred by both the BM6001 element and the cat-erm-tet element from Streptococcus agalactiae B109. Within the BM6001 element cat and tet were separated by 30 kb, and cat was flanked by two copies of a sequence that was also present in the recipient strain Rx1 DNA. Another sequence at least 2.4 kb in size was found inside the BM6001 element and at two places in the Rx1

genome. Its role is unknown. The ends of the BM6001 element appear to be the same as those of the B109 element, both as seen after transfer to S. pneumoniae and as mapped by others in pDP5 after transposition in Streptococcus faecalis. No homology is seen between the ends of the BM6001 element and no evidence found suggesti hat it ever circularizes.

12356 **Cloning and physical characterization of chromosomal conjugative elements in streptococci.** Vijayakumar, M.N.; Priebe, S.D.; Pozzi, G.; Hageman, J.M.; Guild, W.R. (Duke Univ., Durham, NC). *Journal of Bacteriology;* **166**: No. 3, 972-977(Jun 1986). Contract AS05-76EV03941.

A directed insertion method was used to introduce a nonreplicating vector plasmid into the large conjugative cat-tet element found in the chromosome of Streptococcus pneumoniae BM6001 and derivatives. To direct insertion preferentially to the conjugative element, we transferred it by conjugation to Streptococcus faecalis and then used DNA from this strain as a source of restriction nuclease fragments for ligation to digests of the vector pVA891, which can replicate in Escherichia coli but not in streptococci. This ligation mix was used to transform pneumococcal cells carrying the cat-tet element, with selection for the erythromycin resistance carried by pVA891. Eight such isolates were found, and transformation and conjugation tests showed that in each case the vector had inserted into the conjugative element, as expected. DNA from these pneumococcal strains generated a variety of E. coli plasmids which provide tools for obtaining a detailed restriction map and for defining other structural features of the streptococcal conjugative element.

12357 **Nucleotide sequence, transcript mapping, and regulation of the RAD2 gene of Saccharomyces cerevisiae.** Madura, K.; Prakash, S. (Univ. of Rochester, NY). *Journal of Bacteriology;* **166**: No. 3, 914-923(Jun 1986). Contract FG02-85ER60281.

The authors determined the nucleotide sequence, mapped the 5′ and 3′ nRNA termini, and examined the regulation of the RAD2 gene of Saccharomyces cerevisiae. A long open reading frame within the RAD2 transcribed region encodes a protein of 1031 amino acids with a calculated molecular weight of 117,847. A disruption of the RAD2 gene that deletes the 78 carboxyl terminal codons results in loss of RAD2 function. The 5′ ends of RAD2 mRNA show considerable heterogeneity, mapping 5 to 62 nucleotides upstream of the first ATG codon of the long RAD2 open reading frame. The longest RAD2 transcripts also contain a short open reading frame of 37 codons that precedes and overlaps the 5′ end of the long RAD2 open reading frame. The RAD2 3′ nRNA end maps 171 nucleotides downstream of the TAA termination codon and 20 nucleotides downstream from a 12-base-pair inverted repeat that might function in transcript termination. Northern blot analysis showed a ninefold increase in steady-state levels of RAD2 mRNA after treatment of yeast cells with UV light. The 5′ flanking region of the RAD2 gene contains several direct and inverted repeats and a 44-nuclotide-long purine-rich tract. The sequence T G G A G G C A T T A A found at position - 167 to -156 in the RAD2 gene is similar to at sequence present in the 5′ flanking regions of the RAD7 and RAD10 genes.

12358 **DNA repair genes of mammalian cells.** Thompson, L.H.; Brookman, K.W.; Salazar, E.P.; Fuscoe, J.C.; Weber, C.A. (Lawrence Livermore National Lab., CA). *Basic Life Sciences;* 349-358(1986).

In the Chinese hamster ovary (CHO) cell line, various mutations affecting DNA repair have been obtained. Mutants that belong to 5 genetic complementation groups for ultraviolet (UV) sensitivity and resemble the cells from individuals having the cancer-prone genetic disorder xeroderma pigmentosum (XP) were previously identified. Each mutant is defective in the incision step of nucleotide excision repair and hypersensitive to bulky DNA lesions. These UV mutants can be divided into two subgroups; only Groups 2 and 4 are extremely sensitive to mitomycin C and other DNA cross-linking agents. The clear-cut phenotypes of the CHO mutants have allowed us to construct hybrid cells by fusion with human lymphocytes and thereby identify which human chromosomes carry genes that correct the CHO mutations. The first two mutations analyzed, UV20 (excision-repair deficient; UV Group 2) and EM9, which has a very high frequency of sister chromatid exchange (SCE), are both corrected by chromosome 19. Efforts are underway to isolate complementing repair genes by DNA-mediated gene transfer. The human gene that corrects mutant EM9 and the hamster gene that corrects UV135 (UV Group 5) have been introduced by cotransfer of genomic DNA and the dominant selectable marker gpt (guanine phosphoribosyltransferase) gene. In each case, the DNA repair function was co-selected based on resistance to 5-chlorodeoxyuridine (CldUrd) or repeated UV irradiation, respectively. The presence of a functional human repair gene in the EM9 transformants is shown by the presence of common human DNA sequences on some fragments produced by restriction enzyme cleavage. In UV135, transfer of a repair gene is indicated by a colony distribution containing jackpots and by instability of the resistant phenotype.

12359 **Molecular genetic analysis of nodulation genes of Rhizobium meliloti.** Kondorosi, A.; Kondorosi, E.; Banfalvi, Z.; Putnoky, P.; Toeroek, I. Schmidt, J.; John, M. (Hungarian Academy of Sciences, Szeged). pp 91-98 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

In R. meliloti the majority of symbiotic genes are located on the sym megaplasmid. Genes coding for early functions in nodulation, genes influencing nodulation efficiency, the nif structural genes and adjacent fix (probably nif) genes are located on a 90 kbp region of the megaplasmid. The essential nodulation genes are arranged into two clusters. One cluster is conserved in several Rhizobium species and code for common nodulation functions. The common nod region contains probably 3 genes, nodA, B and C; moreover, nodulation is affected also by a DNA region located left to the common nod genes. The other nod cluster contains genes determining host range specificity of nodulation. Products of nod genes from both clusters act (and probably interact), at a very early stage of the nodulation process, such as root hair curling. Preliminary data suggest that nodulation genes cannot express under normal growth conditions without the plant. Recent comparison of nucleotide sequence data from the putative promoter regions of the nod genes revealed homologous sequences. Although S1 mapping and functional analysis of these promotes are necessary to find out the significance of these conserved sequences, it is tempting to speculate that these nod genes are subject to a specific control. 18 references, 4 figures.

12360 **Developmental status of bioassays in genetic toxicology: a report of Phase II of the US Environmental Protection Agency Gene-Tox program.** Brusick, D.; Auletta, A. (Environmental Protection Agency, Washington, DC). *Mutation Research;* **153**: 1-10(1985).

The Gene-Tox Program was structured around two phases of genetic test data evaluation. The first phase consisted of 36 Work Group reports, each evaluating the results and performance of a specific bioassay. The second phase consisted of a plan to summarize the information provided by the Work Groups. The Gene-Tox Coordinating Committee was to be responsible for Phase II, and several subgroups were assigned specific goals in implementing this analysis. This report deals with Goal I which is to identify the developmental status of the individual bioassays reviewed by the Gene-Tox Work Groups in the first phase of the Program. 5 references, 6 tables.

12361 **Plasmid vector for cloning in Streptococcus pneumoniae and strategies for enrichment for recombinant plasmids.** Balganesh, T.S.; Lacks, S.A. (Brookhaven National Lab., Upton, NY). *Gene;* **29**: 221-230(1984).

A new plasmid, pLS101, was constructed for use as a vector for cloning in Streptococcus pneumoniae. This plasmid carried two selectable genes, tet and malM, each of which contains two or more restriction sites for cloning. Insertional inactivation of the malM gene allowed direct selection of Tc/sup R/Mal$^-$ clones containing recombinant plasmids. Other means of enriching a recipient population for cells containing recombinant plasmids were examined. The effect of removing vector terminal phosphate in attempts

to clone heterogeneous DNA fragments, such as those from chromosomal DNA, was to abolish recombinant plasmid establishment altogether, presumably because donor DNA processing during entry into the cell prevented establishment of the hemiligated molecule. However, with homogeneous DNA fragments, such as those from plasmid or viral DNA, vector phosphate removal allowed enrichment for recombinant plasmids. In the cloning of heterogeneous DNA that was homologous to the recipient chromosome (i.e. chromosomal DNA from S. pneumoniae), recovery of recombinant plasmids could be enriched tenfold (relative to the regenerated vector) by the process of chromosomal facilitation of plasmid establishment. This involved an additional passage of the mixed plasmids in which interaction with the chromosome of plasmids containing chromosomal DNA inserts (i.e. recombinant plasmids) increased their frequency of establishment relative to the vector plasmid. An overall strategy for cloning in S. pneumoniae, depending on the nature of the fragment to be cloned, is proposed.

12362 **Molecular organization of nuclear and cell organelles fungal ribosomal RNA genes.** Dutta, S.; Bollon, A.P. (Howard Univ., Washington, DC). *Nucleus (Calcutta);* **27**: No. 1-2, 6-19(1984).

There are about 20,000-30,000 unique structural genes in a typical fungal organism like Neurospora or yeast. An analysis of fungal chromosomal rRNA gene repeat units (rDNA) suggests that they have the typical 5 x 8S, 16-18S, and 26-28S conserved sequences. In addition, these rRNA gene clusters contain Internal Transcribed Spacer (ITS) regions of 500-1000 nucleotide base pair (bp) size, which also contain the 5.8S rRNA gene. Thus, one transcribed repeat unit of rDNA containing the rRNA genes is approximately 6 kilobase pair (kb) in some fungal species. In yeast, an additional 5S rRNA gene is included in the 6 kb repeat unit. In many fungi, rRNA genes exist in multiple copies of 100-450. Each of the repeat units of rRNA genes is separated from each other by External Transcribed Spacer (ETS) and a stretch of External Non-transcribed Spacer (ENTS) region of 2-5 kb sizes. These ITS, ETS or ENTS regions are variable regions which may provide species specific characteristics for fungal taxonomy. Nuclesomal structures of rDNAs also conform to other chromosomal genes. Extrachromosomal rRNA genes of Physarum or Tetrahymena are organized as 5′→3′ ES 3′→5′ (pallindromes). Ribosomal RNA genes are also located within mitochondrial genomes of fungal species, as single copies comprising mostly 16S and 26S rRNA genes which are separated from each other by long stretches of DNA sequences of 1-5 kb size.

(Oregon State Univ., Corvallis). pp 3-12 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The hydrogenase system in Hup^+ strains of Rhizobium japonicum catalyzes the oxidation of H_2 to H_2O via a pathway which includes components of normal respiratory electron transport chain. In addition to the hydrogenase Hup^+ strains contain a cytochrome b-559 which appears to be uniquely associated with a functional hydrogenase system. An experiment in which a Hup^+ R. japonicum mutant was compared with a stable Hup^+ derivative of the mutant as inoculants for soybean in large cylinders (10 replicates) has revealed statistically significant increases in weights and N contents of seeds, leaves and total plant material from use of the Hup^+ strain. Since possession of the H_2 uptake system seems to benefit the N_2 fixation process, the authors have attempted to transfer hup genes to those species and strains lacking an effective H_2 system. From a gene bank of R. japonicum 122DES DNA, a series of cosmids have been isolated which contain insert DNA that complements several Hup^- mutants of R. japonicum. From transposon mutagenesis they have concluded that Hup specific sequences span about 16 kb of the total 25 kb insert in cosmid pHU1. Since the transfer of pHU1 into wild-type and some mutants of Rhizobium fails to confer Hup activity, more cosmids with additional adjacent DNA have been isolated and are being characterized. Some of these may contain most of, if not all, the hup determinants. 48 references, 1 figure, 2 tables.

12373 **Factors affecting functional leghemoglobin in legume nodules.** Klucas, R.V.; Lee, K.K.; Saari, L.; Erickson, B.K. (Univ. of Nebraska, Lincoln). pp 13-20 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The main functions of leguminous root nodules are nitrogen fixation and assimilation. Leghemoglobin (LB), a myoglobin-like protein, is invariably associated with nodules from nitrogen-like protein, is invariably associated with nodules from nitrogen-fixing legumes. Although not necessarily conclusive, evidence supports a dual location of LB within infected cells with the majority of LB located outside the peribacteroid membrane envelope and the remainder inside the envelope but outside the bacteroids. The apparent function of LB in nodules is to facilitate the diffusion of O_2 to the O_2-requiring bacteroids. The authors are investigating the forms of LB in leguminous nodules and the processes that maintain LB in the functional ferrous form. 20 references, 3 figures, 2 tables.

12374 **Characterization of carbon metabolism in Rhizobium japonicum bacteroids.** Emerich, D.W. (Univ. of Missouri, Columbia). pp 21-30 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The metabolism of photosynthate by nodule tissues and bacteroids is not well characterized nor is it known in which symbiont or subcellular organelle the relevant metabolic reactions occur. Isolated suspensions of bacteroids are capable of utilizing a wide variety of carbon compounds to support respiration and nitrogen fixation activity. Although sucrose and glucose are the primary photosynthetic products that are transported to the roots of soybean nodules, organic acids particularly succinate, malate, and fumarate promote greater rates of respiration and nitrogen fixation in isolated bacteroid suspensions. Genetic evidence supports the concept that organic acids of the citric acid cycle are necessary for symbiotic nitrogen fixation. This article will discuss recent results from this laboratory concerning particular enzymes of the citric acid and poly-β-hydroxybutyrate cycles of Rhizobium japonicum bacteroids. 25 references, 3 figures, 2 tables.

12375 **Uninfected cells in ureide- and amide-exporting legume root nodules.** Newcomb, E.H.; Selker, J.M.L.; Tandon, S.R.; Meng, F.J.; Kowal, R.R. (Univ. of Wisconsin, Madison). pp 31-40 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

There are numerous developmental and structural differences between the nodules of the amide and ureide exporters, it is a characteristic of both groups and of the nodules of most legumes that many of the cells in the central infected region remain uninfected throughout nodule life. An attempt is made to characterize those features of mature nodules which provide evidence bearing on the types of controls in effect during development of uninfected cells. Some quantitative information on the differences in organelle volume and number between uninfected and infected cells of soybean nodules is presented which will define the extent of the ultrastructural divergence that develops for three key organelles: mitochondria, plastids and peroxisomes. 21 references, 2 figures, 2 tables.

12376 **Plant hemoglobin properties, function, and genetic origin.** Appleby, C.A. (CSIRO, Canberra, Australia). pp 41-51 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Attention is focused on the following questions in relation to nitrogen fixation. 1. Is the respiratory system of the root nodule bacteria similar to that found in other microorganisms and tissues, or is the function of nitrogen fixation uniquely associated with an unusual type of respiration? 2. Are there fundamental differences in the respiratory systems of the different species or strains of the root nodule bacteria which might be correlated with the observed specific differences in their ability to fix nitrogen in association with the various legumes? 3. Do differences exist in the respiratory system of a given strain when grown on laboratory medium in comparison with growth in association with the plant? 51 references, 3 tables.

12377 **Biochemical genetics of nitrogen fixation of Klebsiella pneumoniae.** Brooks, S.J.; Imperial, J.; Brill, W.J. (Univ. of Wisconsin, Madison). pp 65-74 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Of all the nitrogen-fixing organisms studied, Klebsiella pneumoniae is the best understood from the biochemical, genetic, regulatory and molecular biological points of view. It has been interesting to follow the sequence of many of the key discoveries, since a discovery regarding the biochemistry of nitrogen fixation has frequently led to an appreciation for the genetics and regulation of the system. Likewise, mutants have been invaluable to open up the complexity of the biochemistry of nitrogen fixation. As more nucleotide sequences are being worked out, hypotheses as to the molecular bases for the very interesting regulatory phenomena should begin to be solved. Even though progress with all aspects of nif has been rapid, there are a number of fascinating problems that will take another decade or two to solve. This article will highlight some of the recent developments and point out a number of questions yet to be answered. 65 references, 1 figure.

12378 **Organization of the genes for nitrogen fixation in cyanobacteria and photosynthetic bacteria.** Haselkorn, R.; Golden, J.; Robinson, S.J.; Avtges, P.; Kranz, R.G.; Scolnik, P.A. (Univ. of Chicago, IL). pp 83-90 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The authors have studied the organization of the nif genes in the filamentous cyanobacterium Anabaena, in which nitrogen fixation, under aerobic conditions, occurs in heterocysts. These specialized cells differentiate at regular intervals along each filament when the cells are starved of combined nitrogen. Until recently no gene transfer system was available for genetic analysis of Anabaena, so their information about nif gene organization and expression has been based entirely on recombinant DNA experiments, using cloned genes from Klebsiella to identify and clone homologous DNA from Anabaena. The cloned Anabaena nif DNA was subsequently used for three purposes: to analyze the regulation the regulation of nif gene transcription, to define nif gene promoters, and to study the rearrangement of the nif genes during heterocyst differentiation. The authors have also studied the organization and regulation of the nif genes in the photosynthetic bacterium Rhodopseudomonas capsulata. This organism has several interesting features: it fixes nitrogen and carbon dioxide at the same time, it exchanges genes with E. coli, and it harbors a defective transducing phage called GTA (for Gene Transfer Agent) that makes site-specific insertion or deletion mutagenesis extremely efficient. They have exploited these genetic tools to identify and to clone the genes coding for the nitrogenase complex (nifH, D, K) as well as three other nif genes. One of the latter is a regulatory gene. These genes are much more widely dispersed than the nif genes of Klebsiella. Moreover, R. capsulata contains multiple copies of sequences related to nifH, D, and K. 20 references, 3 figures, 2 tables.

12379 **Mechanism and structure of nitrogenase Fe-protein.** Howard, J.B.; Deits, T.L.; Anderson, G.L.; Maroney, M.; Que, L.; Hausinger, R.P. (Univ. of Minnesota, Minneapolis). pp 153-162 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The nitrogen fixation complex contains two enzyme components: MoFe-protein (component 1 or dinitrogenase) is the site of substrate reduction and Fe-protein (component 2 or dinitrogenase reductase) is the ATP-dependent reductant of the MoFe-protein. The Fe-protein is a dimer of identical, M/sub r/ = 30 - 33,000 subunits. The protein contains 4 Fe and inorganic S which can be extruded as a 4Fe:4S cluster in denaturing solvents (1). Transfer of electrons between Fe-protein and MoFe-protein is a highly specific reaction which requires a number of criteria to be satisfied. For example, electron transfer is intimately connected to ATP hydrolysis. MgATP binding reduces the redox potential of the Fe-protein to ~-400 mV; yet the lower redox potential cannot be the sole driving force for the transfer. This suggests that the redox potential of the Fe-protein is expressed only in the ternary complex, [Fe-protein ATP MoFe-protein]. For electron transfer, there are several restraints on the protein structures. Although the Fe-proteins from different species have similar amino acid sequences, they are not equally active in heterocomplexes with the MoFe-protein. Some Fe-proteins have little or no activity in heterocomplexes but are potent competitive inhibitors of homocomplexes. In this paper, the authors describe some of the properties of the Fe-proteins from Azotobacter vinelandi (Av2) that may be related to the formation of and reactions in the active complex.

12380 **Utilization of photosynthate for nitrogen fixation in seedlings of Myrica gale and Alnus rubra.** Tjepkema, J.D. (Univ. of Maine, Orono). pp 183-192 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

A large amount of energy is consumed during nitrogen fixation, which is thus an important component of the energy budgets of all nitrogen-fixing organisms and symbioses. Although the energy cost of nitrogen fixation in legumes has been extensively studied, there is little information on actino-rhizal plants, which differ from the legumes in several important characters including anatomy, endophyte, and oxygen regulation. In this study data are presented on the energy cost of the nitrogen fixation in seedlings of two actinorhizal plants as a function of seedling age. 19 references, 10 figures.

12381 **Intersymbiotic transport processes in nitrogen-fixing root nodules.** Quispel, A.; Van Brussel, A.A.N.; Hooymans, J.J.M.; Priem, W.J.E.; Staal, H.J.M. (State Univ. of Leiden, Nonnensteeg, Netherlands). pp 193-202 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

In this paper the authors will try to give some impression of the nutrient flows between the endophytic forms of the diazotrophic symbiotic microorganisms and their hosts realizing that such nutrient flows can only be established as an essential part of the regulatory mechanisms. It is only by the integration into the regulatory mechanisms of host cells and endophytic symbionts that the complicated structure develops which provides the basis for the functional transport systems. In the Rhizobium-Leguminosae root nodules this structure consists of a peribacteroid membrane, which is formed from the plasmalemma of the host cells and the bacteroid cell envelope. The latter cell envelope consists of the bacterial cytoplasmic membrane and the cell wall with its outer membrane. Two interspaces may contain important components for transport: the periplasmic space between the bacterial cytoplasmic and outer membrane and the intersymbiontic space between the bacteroid outer-membrane and the peribacteroid membrane. In non-leguminous actinorhizae the situation may be still more complicated due to the complex structure of the cell wall of Frankia and the development of deposits of cell wall material on the plant membrane. 38 references, 3 figures.

12382 **Host legume control of Rhizobium function.** Phillips, D.A.; Bedmar, E.J.; Qualset, C.O.; Teuber, L.R. (Univ. of California, Davis). pp 203-212 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

In this report the authors describe results from two continuing studies directed toward producing legumes that will facilitate modern investigations of how the host legumes that will facilitate modern investigations of how the host legume can control symbiotic functioning of Rhizobium. One case in which the host pea (Pisum sativum L.) cultivar changes the uptake hydrogenase phenotype of R. leguminosarum may provide a basic understanding of one aspect of the Rhizobium-legume association. The other study, which involves the development of alfalfa populations that apparently can increase N_2 fixation by diverse strains of R. meliloti, could produce agronomically useful plant materials. It is possible that the improved alfalfa populations also will contribute to the authors basic understanding of the Rhizobium-legume association, but complexities associated with the autotetraploid genetic system in alfalfa will make that possibility more remote than in the simpler pea system. 40 references, 2 figures, 4 tables.

12383 **Nitrogen fixation by Desulfovibrio gigas and other species of Desulfovibrio.** Postgate, J.R.; Kent, H.M.; Hill, S.; Blackburn, H. (Univ. of Sussex, Brighton, England). pp 225-234 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Some chemostat-bases studies on diazotrophy in Desulfovibrio are presented with emphasis on recent studies with Desulfovibrio gigas. The most unexpected observation is that Desulfovibrio gigas, despite its exacting anaerobic habit, shows reversible oxygen-induced switch-off of nitrogenase activity.

12384 **Heterocyst development and nitrogen fixation by mastigocladus laminosus.** Stevens, S.E. Jr.; Mehta, V.B.; Lane, L.S. (Pennsylvania State univ., University Park). pp 235-243 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The authors have reported several of their observations on the similarities and differences between M. laminosus and Anabaena spp. The similarities and differences between M. laminosus and Anabaena spp. The most notable differences were the capacity of M. laminosus to form multiple heterocysts and to form heterocysts at frequencies within the higher range exhibited by symbiotic associations. These two phenomena probably reflect a lack of spatial control over heterocyst differentiation in M. laminosus. 40 references, 6 figures, 2 tables.

12385 **Dinitrogen fixation in methylotrophic bacteria.** Lidstrom, M.E.; Murrell, J.C.; Toukdarian, A.E. (Univ. of Washington, Seattle). pp 245-251 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

It is not known whether methylotrophs actively fix dinitrogen in their natural habitats, since they are often found in environments where dissolved inorganic nitrogen is relatively high. In order to assess the potential for these bacteria to contribute to the nitrogen budget in specific ecosystems, the authors have begun studies of the regulation and genetics of nitrogen fixation in two representative diazotrophic methylotrophs, Xanthobacter sp. H4-14 and Methylosinus sp. 6. Results indicate that methylotrophic nitrogenases are similar to the enzymes found in other diazotrophs. The cloning of nif DNA and the characterization of nif mutants in methylotrophs is the first step towards understanding the molecular basis of regulation of dinitrogen fixation in these bacteria.

12386 **Nitrogen fixation in Rhodospirillum rubrum: the regulation of Fe protein and its activating enzyme.** Kanemoto, R.H.; Saari, L.; Pope, M.; Paul, T.D.; Lowery, R.; Murrell, S.; Ludden, P.W. (Univ. of Wisconsin, Madison). pp 253-260 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

An attempt is made to examine the nitrogenase system in Rhodospirillum rubrum. In addition, a cascading pathway for the regulation of nitrogenase activity is demonstrated. The regulation of nitrogenase by covalent modification of the Fe protein offers a rapid mechanism for responding to changes in cell metabolism. Upon exposure to reduced nitrogen, the cell initiates a regulatory cascade to inhibit nitrogenase activity and thereby conserve ATP and reductant.

12387 **Electron transfer chains of cyanobacterial heterocysts.** Houchins, J.P. (Univ. of Minnesota, St. Paul). pp 261-268 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

During aerobic growth nitrogen fixation in cyanobacteria is confined to a specialized cell type, the heterocyst, which accounts for 5-10% of the cells in the filament. Upon differentiation of vegetative cells into heterocysts photosystem 2 is lost, however, photosystem 1 and the associated electron transfer chain is retained. Heterocysts also possess substantial respiratory activities, and a segment of the electron transfer chain between plastoquinone and plastocyanin/cyt c-553 is shared in common by the photosynthetic and respiratory chains. Electrons are donated to this common segment by NADH dehydrogenase and by a membrane bound uptake hydrogenase. Plastocyanin/cyt c-553 then donates electrons either to photosystem 1 or to a cyt aa_3-type cytochrome oxidase. This report examines details of the electron transport pathways through which hydrogen, NADH, and NADPH provide electrons for nitrogen fixation in heterocysts.

12388 **Physiological studies on N_2-fixing cyanobacteria.** Stewart, W.D.P.; Rowell, P.; Cossar, J.D.; Kerby, N.W. (Univ. of Dundee, Scotland). pp 269-279 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

N_2-fixing cyanobacteria are unique in that within the one organism and often within the one cell they carry out two of the major processes which sustain life on Earth: N_2 reduction to ammonia via the enzyme nitrogenase and oxygenic photosynthesis. The key enzymes involved closely resemble those of other organisms for nitrogenase; for the light reactions of photosynthesis and for ribulose 1,5-bisphosphate carboxylase/oxygenase (RuBisCO) and other Calvin Cycle enzymes. The ways in which such organisms are organized to satisfactorily perform these functions are of particular interest and concern. Here the authors summarize ways in which the heterocysts of cyanobacteria are organized to fix N_2, considering in particular, factors which may be implicated in the supply of reductant to nitrogenase, and aspects of NH_4^+ regulation of nitrogenase in cyanobacteria. 49 references, 4 figures, 2 tables.

12389 **Legume nodule carbon utilization in the synthesis of organic acids for the production of transport amides and amino acids.** Duke, S.H.; Henson, C.A. (Univ. of Wisconsin, Madison). pp 293-302 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Legume root nodules use large amounts of carbohydrates during periods of active N_2 fixation. Minchin et al. estimate that up to 20 mg of carbon is used per mg n_2 fixed. Carbohydrates are used for energy production by both bacteroids and host plant portions of nodules. The host plant also utilizes carbohydrates for assimilation and transport of fixed N_2. This review deals primarily with the flow of carbon from its uptake by the nodule to its use in the synthesis of carbon skeletons for production of amides and amino acids containing fixed n_2 which are transported to the developing legume. The authors investigations have been primarily with the amide and amino acid transporting nodules of alfalfa (Medicago sativa L.); hence, they will emphasize this species. 60 references, 2 figures, 2 tables.

12390 **Stoichiometry of CO_2 evolution during photorespiratory carbon flow.** Peterson, R.B.; Hanson, K.R. (Connecticut Agricultural Experiment Station, New Haven). pp 311-320 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

This article concerns the inhibition of photosynthesis attributable to O^2-dependent photorespiration. Experiments were conducted using new methodology which demonstrate that in intact tissue the stoichiometry of CO_2 evolution during photorespiration is not fixed. The results strongly suggest that multiple sources of CO_2 may exist during photorespiration and that the relative contributions of the various sources to CO_2 evolution may be under environmental control. 23 references, 8 figures, 1 table.

12391 **Photoinhibition of N_2 fixation, photosynthesis, and the collapse of blue-green algal blooms.** Osmond, B.; Cooper, J.J.; Vigg, S.; Buchen-Osmond, C. (Univ. of Nevada System, Reno). pp 321-329 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Although photoinhibition of photosynthesis has been investigated in non-N_2-fixing blue-green algae, there are no physiological studies of the simultaneous responses of N_2 fixation and photosynthesis to potentially inhibitory irradiance in blooming blue-green algae. The complex interdependency of N_2 fixation and photosynthesis in these algae is well known from laboratory studies, all of them done with low-light grown algae. In higher plants it is clear that photoinhibition, the light dependent inhibition of photosynthetic processes, is a major factor determining the stability and longevity of the autotrophic system. Furthermore low leaf nitrogen status limits the capacity for acclimation of leaves to high light, and predisposes leaves to photoinhibition. Extrapolating from these observations, the authors suggest that growth and stability of blue-green algal blooms in desert lakes might depend on the response of N_2 fixation to high light intensity. This paper describes preliminary experiments, and reviews others, which show N_2 fixation can be more sensitive to photoinhibition than is photosynthesis. They then speculate on the biochemical bases of this response, and on the role of photoinhibition in the demise of blue-green algal blooms. 44 references, 5 figures, 2 tables.

12392 **Oxidative photosynthetic carbon cycle and peroxisomal glycolate metabolism.** Tolbert, N.E. (Michigan State Univ., East Lansing). pp 333-341 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The oxidative photosynthetic carbon cycle or the C_2 cycle has developed from investigations dealing with its 5 different parts: (a) The glycolate pathway begins with the P-glycolate biosynthesis from ribulose-P_2 and includes the metabolism of glycolate to glycine and serine; (b) The reversible glycerate pathway between the 3-PGA pool in the chloroplasts through serine formation in the peroxisomes and the formation of C_1-THF and glycine in the mitochondria; (c) The regeneration of ribulose-P_2 in the chloroplasts to utilize NADPH and ATP produced from the light reactions of photosynthesis; (d) Shuttles of respiratory metabolites between the subcellular compartments; (e) The photorespiratory nitrogen cycle which refixes the NH_3 generated during glycine oxidation. The C_2 cycle co-exists with the C_3 reductive cycle in a competitive ratio between the availability of CO_2 for the ribulose-P_2 carboxylase reaction and O_2 for the oxygenase. The two cycles are not independent, for they are controlled by this one bifunctional enzyme and use the same reactions and energy for regenerating the ribulose-P_2. Their major differences are outside the chloroplast where glycolate is metabolized in the C_2 cycle, whereas sucrose is synthesized as the end product of the reductive cycle. 25 references, 1 figure, 1 table.

12393 **Regulation of photosynthetic CO_2 assimilation and crop yield.** Zelitch, I. (Connecticut Agricultural Experiment Station, New Haven). pp 343-350 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

A cooperative effort is underway to increase net photosynthesis and hence growth in C_3 plants through rational changes in leaf biochemistry using genetic cell culture methods. The authors would like to produce crops with superior yields because they possess superior photosynthetic efficiency. They are attempting to obtain low photorespiration mutants from haploid tobacco tissue cultures and other systems using positive selection schemes, and are seeking to increase wheat yields greatly, using unconventional selection of parental types and conventional plant breeding methods. Some of this work will be described. 16 references, 1 figures, 6 tables.

12394 **Analysis of Chlamydomonas reinhardii mutants and defects in the CO_2 concentrating system.** Ogren, W.L.; Spalding, M.H.; Spreitzer, R.J. (Univ. of Illinois, Urbana). pp 351-357 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Photosynthesis is stimulated and photorespiration is suppressed in Chlamydomonas reinhardii and other green algae by a multi-step pathway which concentrates CO_2 at the site of ribulose 1,5-bisphosphate (RuBP) carboxylase/oxygenase, thereby stimulating RuBP carboxylase activity and inhibiting RuBP oxygenase activity. Increased photosynthesis and reduced photorespiration in these organisms at air levels of CO_2 and O_2 are manifested by a high affinity for CO_2, a photosynthesis rate near the Vmax, absence of O_2 inhibition of CO_2 fixation, low rates of synthesis of photorespiratory products such as glycolate and glycine, and a CO_2 compensation concentration of near zero. The CO_2 concentrating system in Chlamydomonas is inducible, induction requiring a low CO_2 concentration, the capability of the angal strain to photosynthesize and the presence of O_2. Biochemical and physiological studies suggested the involvement of two components in the system, carbonic anhydrase and an energy-requiring bicarbonate or CO_2 transport process. In order to further characterize this CO_2 concentrating system, the authors have pursued an approach designed to identify and characterize mutant strains with defects in the system. 10 references, 3 tables.

12395 **Pyrophosphate-dependent glycolysis and regulation by fructose 2,6-bisphosphate in plants.** Black, C.C.; Smyth, D.A.; Wu, M.X. (Univ. of Georgia, Athens). pp 361-370 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Sugar conversions are fundamental in the authors understanding of plants because sugars support and feed into essentially all aspects of plant metabolism and growth. Indeed biochemical pathways for the interconversion of hexoses and trioses are so well known that one hardly expects to discover a new pathway of glycolysis, much less a new hexose bisphosphate with regulatory roles in sugar metabolism. Nor would one expect to learn that a common product of many biosynthetic reactions, namely pyrophosphate (PPi), is an energy source to drive glycolysis. Recent research has focused on these and other features of plant sugar metabolism which the authors will consider along with their current model for the regulation of cytoplasmic glycolysis. 28 references, 5 figures, 4 tables.

12396 **Metabolic modifications of crassulacean acid metabolism - CAM-idling and CAM-cycling.** Ting, I.P.; Sipes, D. (Univ. of California, Riverside). pp 371-378 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Crassulacean acid metabolism (CAM) is a variation of photosynthesis that has been studied for many years. During the last two decades, there has been intensified research stimulated by the discovery of C_4-photosynthesis and the realization that CAM and C_4 are similar in many respects. Two known modifications of the basic CAM pathway in terrestrial plants are termed CAM-idling and CAM-cycling. In both, there is organic acid fluctuation similar to CAM but little or no CO_2 uptake at night. CAM-idling was first observed in a cactus at Deep Canyon in 1973. It was noted that under severe water stress, the stomata of Opuntia bigelovii were closed day and night, yet there was a continued diurnal fluctuation of organic acids evidently through the CAM pathway. The fluctuation was measured over a 3-year period with no detectable CO_2 uptake day or night. The second phenomenon, not too unlike CAM-idling, is termed CAM-cycling and is characterized by diurnal fluctuation of organic acids in the manner of CAM, but virtual-

ly all CO_2 uptake is during the day and none at night. Thus, plants showing CAM-cycling appear as C_3 plants at the gas exchange level but as CAM plants when organic acid metabolism is observed. It is the purpose of this paper to discuss the CAM-cycling phenomenon in comparison with CAM and CAM-idling. 19 references, 6 figures, 2 tables.

12397 **Characteristics of CO_2 fixation and productivity of corn and soybeans.** Christy, A.L.; Williamson, D.R. (Monsanto Agricultural Products Co., St. Louis, MO). pp 379-387 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Grain yield is an integration of a large number of variables including weather, soil, fertility, genotype and physiology. Once the seed is planted, several of these variables are set and yield will primarily be the result of the physiology of the crop interacting with the weather. Photosynthesis has long been assumed to be one of the key physiological processes and the relationship between crop productivity and photosynthesis, has been the subject of recent reviews. Obviously, there is some relationship between photosynthesis and yield, however, to date, the exact nature of this relationship has remained elusive. Recently, the authors reported that yield was strongly dependent on seasonal photosynthesis in soybean in studies with plant density and shade treatment. Further studies with different cultivars of soybean and corn hybrids have revealed a more complex relationship between grain yield and canopy photosynthesis. The following is a summary of these studies, and they will compare and contrast the characteristics of photosynthesis, photosynthate partitioning, and yield in corn and soybeans. 11 references, 8 figures, 1 table.

12398 **Dicarboxylate transport into isolated pea chloroplasts.** Werner-Washburne, M.; Keegstra, K. (Univ. of Wisconsin, Madison). pp 389-397 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The proper functioning of a plant cell requires substantial fluxes of various metabolites between the cytoplasm and the stromal space of chloroplasts. For some metabolites, such as nitrite and bicarbonate, this transport has been demonstrated to occur by diffusion of the uncharged form of the molecule across the membrane. For most metabolites, however, saturation of transport by the substrate and inhibition of transport is carrier-mediated. One of the most active of the chloroplast transport systems is the dicarboxylate transporter. An early model of dicarboxylate transport envisioned a single carrier with broad specificity. According to this model, the dicarboxylate carrier mediates the counter exchange of the dicarboxylates malate, oxaloacetate, 2-oxoglutarate, succinate and fumarate as well as the amino acids aspartate, glutamate and possibly glutamine and aspargine. More recently, work from several different laboratories has led to the conclusion that the simple model of a single dicarboxylate carrier is inadequate. The remainder of this manuscript discusses some of the evidence that supports the argument for multiple dicarboxylate carriers. 17 references, 1 figure, 2 tables.

12399 **Regulation of photosynthetic sucrose formation in leaves.** Huber, S.C.; Doehlert, D.C.; Kerr, P.S.; Kalt-Torres, W. (Dept. of Agriculture, Raleigh, NC). pp 399-407 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Regulation of the rate of sucrose formation in leaves appears to involve two types of mechanisms, viz. metabolic fine control, cytoplasmic fructose-1,6-bisphosphatase (FBPase) and sucrose phosphate synthase (SPS). Some of the options for metabolic regulation of the cytoplasmic sucrose formation pathway are summarized. An attempt is made to compare; the regulatory properties of SPS isolated from leaves of different species. Evidence is presented for diurnal rhythms in SPS activity in soybean leaves as one example of the coarse control of enzyme activity that may be related to a physiological process.

12400 **Photosynthesis in allopolyploid Festuca.** Randall, D.D.; Nelson, C.J.; Sleper, D.A.; Miles, C.D.; Crane, C.F.; Krueger, R.W.; Wong, J.H.H.; Poskuta, J.W. (Univ. of Missouri, Columbia). pp 409-433 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

This report describes the authors investigations on photosynthesis in cultivated and wild relatives of an allopolyploid C_3 forage grass, tall fescue, Festuca arundinace, Schreb. Tall fescue belongs to the Bovinae section of the genus Festuca; tribe Festuceae. It evolved in the area surrounding the Mediterranean Sea and is found in its native state in Europe, Tunisia and the west and central area of Asia and Siberia. The Festuca genus contains cultivated hexaploid and wild tetraploid, octoploid and decaploid varieties, all founded on a basic chromosome number of x=7. A diploid species, F. pratensis Huds., morphologically resembles F. arundinacea and probably contributed a genome to some polyploid fescues. The phylogenetic relationships among tall fescue and its relatives are not completely understood and with few known diploids, phylogenetic analyses of the polyploids are difficult. 288 references, 1 figure, 9 tables.

12401 **Aspects of nitrogen and carbon interchange in the Azolla-Anabaena symbiosis.** Peters, G.A.; Kaplan, D.; Meeks, J.C.; Buzby, K.M.; Marsh, B.H.; Corbin, J.L. (Battelle-C.F. Kettering Research Lab., Yellow Springs, OH). pp 213-222 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The free-floating aquatic pteridophytes in the genus Azolla contain an N_2-fixing cyanobacterium, Anabaena azollae, as a symbiont. Six extant species usually are recognized. In each species the symbiotic Anabaena can provide the total N requirement of the association via N_2 fixation and the Azolla sporophytes are capable of prolific vegetative reproduction in the absence of a combined N source. While vegetative reproduction and growth is more common, sexual reproduction occurs and presumably provides a means for survival during unfavorable environmental conditions. Azolla is heterosporous, producing both megasporocarps and microsporocarps on the same plant. Species demarcation is based primarily upon the morphology of these structures. Anabaena filaments are partitioned into both types of sporocarps during their development. The endophyte within the megasporocarp provides an inoculum for the developing sporophyte, maintaining the symbiosis. This report is restricted to studies conducted with the vegetatively propagated Azolla caroliniana - Anabaena azollae symbiosis grown on medium without combined N. It focuses on recent approaches to further elucidate aspects of host-endophyte interaction and incorporates analyses of soluble amino acids and ammonium, assays of ammonia assimilating enzymes, the use of $[^{13}N]N_2$ and the analysis of soluble sugars as well as $^{14}CO_2$-pulse chase studies. For orientation purposes the results are preceded by a description of the symbiosis. 39 references, 3 figures, 3 tables.

12402 **In vivo energetics of symbiotic nitrogen fixation.** Heytler, P.G.; Reddy, G.S.; Hardy, R.W.F. (E.I. du Pont de Nemours & Co., Wilmington, DE). pp 283-292 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

This paper will summarize data on the in vivo energetics of symbiotic N_2 fixation and present data based on respirometric, calorimetric, and NMR studies of soybeans. Overall, symbiotic N_2 fixation in soybeans will be shown to use about 12 g CH_2O per g N_2

fixed. The authors will conclude with some projections of possible opportunities to make up to 75% reductions in the cost of symbiotic N_2 fixation. 12 references, 11 figures, 3 tables.

12403 **Breeding for enhanced dinitrogen fixation potential of common bean (Phaseolus vulgaris L.).** Bliss, F.A. (Univ. of Wisconsin, Madison). pp 303-310 of Nitrogen fixation and CO3" metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Nitrogen fertilizer is usually the most costly input for the production of common bean (Phaseolus vulgaris L.). When fertilizer becomes too expensive or is in limited supply, low yields result, since bean production is often relegated to areas with infertile soils. Increasing the N_2 fixation of common bean is an attractive approach to raising yields and reducing N fertilizer requirements. Measurements of N_2 fixed and various parameters of N_2 fixation suggest sufficient genetic variability among cultivated germplasm to allow improvement through selection. A problem encountered by breeders is the lack of rapid, accurate methods for measuring improvement criteria such as N_2 fixed per plant, proportion of total plant N from fixation and plant or seed production attributable to N_2 fixation. The inbred backcross line method of breeding has been used to produce populations of near-homozygous recombinant lines which were selected for enhanced N_2 fixation potential using acetylene reduction assays of field grown plants. Genetic analyses showed heritable differences for N_2 fixation parameters, traits supporting N_2 fixation and seed yield. Superior selected lines grown under low soil N conditions produced higher seed yields attributable to fixed N compared to the unimproved recurrent parent. Estimates of N_2 fixed using ^{15}N isotope dilution methods are being obtained from field experiments. 21 references.

12404 **(BNL—38980) Activation of N, P, and A1 in patients and cadavers using radiation from the medical accelerator.** Wielopolski, L.; Meek, A.G.; Rothmann, J.C.; Reinstein, L.E. (Brookhaven National Lab., Upton, NY (USA); State Univ. of New York, Stony Brook (USA). Dept. of Radiation Oncology). 1986. Contract AC02-76CH00016. 12p. (CONF-8609203—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003479.

From International symposium on in vivo body composition studies; Upton, NY, USA (28 Sep 1986).

The present work demonstrates that it is possible to monitor the activity of N and P following photoactivation of an anthropomorphic phantom, a patient, and five cadavers. Analysis of the annihilation peak in the spectra revealed the presence of N and P. A strong ^{28}Al photopeak at 1.78 MeV due to neutron activation was identified in four cadavers and verified according to its half-life (T/ sub 1/2/ = 2.30 min). The irradiation of the cadvers in the liver, lung, and skull always yielded the ^{28}Al photopeak. Any possibility of inducing ^{28}Al activity through (n,α) reaction of P was excluded. No Al contamination was found in the materials used to preserve the cadaver. The measured spectra with HP-Ge detector provided precision for N of about 2%, and for P 15%. Using NaI detector the precisions improved to 1% and 5% respectively. The quality of the deconvolution was evaluated using the low Chi- squares values, comparing the time integrals with the total number of counts in the peak, and inspection of the residual spectra. 12 refs., 3 figs., 2 tabs.

12405 **(ORNL/TM—10238) Nuclear medicine: Progress report for quarter ending June 30, 1986.** Knapp, F.F. Jr.; Ambrose, K.R.; Goodman, M.M.; Srivastava. P.C. (Oak Ridge National Lab., TN (USA)). Dec 1986. Contract AC05-84OR21400. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004039.

The development of a new method of protein radiolabeling involving the attachment of radioiodinated N-substituted maleimides to the sulfhydryl groups of proteins is described. Maleimides are known to form strong, sulfide bonds by reaction with organic thiols, and this method thus represents a new alternative to minimize the deiodination of radiolabeled proteins. As a model radioiodinating agent, N-(p[^{125}I]-iodophenyl)maleimide (IPM), was prepared by coupling p-iodoaniline with maleic anhydride, followed by subsequent ring closure. When administered to rats, the [I-125] IPM resulted in the retention of high levels of radioactivity in the blood pool. Further analysis demonstrated about 90% binding to red blood cells. It was also demonstrated that this agent effectively radiolabels model proteins such as BSA and IgG. An evaluation of the relative lipid pool distribution in rat heart extracts after intravenous administration of the straight-chain 15-(p-iodophenyl)pentadecanoic acid and 3,3-dimethyl-branched terminal iodophenyl-substituted fatty acid analogues to normotensive and hypertensive rats has been evaluated. Six shipments of osmium-191 were made to the University of Liege, Belgium, for preparation of radionuclide generators for clinical use and two generators were supplied to the Massachusetts General Hospital for continuous infusion studies in animals. 7 refs., 3 figs., 4 tabs.

12406 **Completely implantable hyperthermia applicator with externalized temperature monitoring: Tests in conductive gel.** Doss, J.D.; McCabe, C.W. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Medical Physics;* **13**: No. 6, 876-881(Nov 1986). Contract W-7405-ENG-36.

Development is underway on a hyperthermia applicator intended for complete implantation and long-term use. Radio frequency energy is transmitted from an external antenna to a closely coupled subdermal antenna. This internal antenna is connected via a transmission line to deeply implanted electrodes. Changes in temperature at the electrodes result in a change in tissue resistivity which modifies the complex impedance seen at the external antenna terminals. This variation in antenna impedance (magnitude and/or phase angle) can, in principle, be utilized to indirectly monitor and regulate tissue temperature at the electrode location. Test results from conductive-gel tissue phantom experiments are presented.

12407 **Fiber optic immunoassay sensor development.** Hirschfeld, T.; Anderson, W.; Block, M.; Eckerson, D.; Glass, T. (Lawrence Livermore National Lab., P.O. Box 808, Livermore, CA 94550). pp 675 of Pittsburgh conference and exposition on analytical chemistry and applied spectroscopy. Abstracts. Pittsburgh, PA; Pittsburgh Conference (1986). (CONF-860309—). Contract W-7405-ENG-48.

From 37. Pittsburgh conference and exposition on analytical chemistry and applied spectroscopy; Atlantic City, NJ, USA (10 Mar 1986).

Immunoassay sensors using an antibody coated optical fiber inside a capillary, can produce analytical results with no sample preparation steps and no skill intensive operations in a short time, on a sample of serum or whole blood with no background interferences. Further improvements in the technology include: 1) Kinetic optimization of the system by optimizing the fiber and capillary diameter, diluting the surface antibody layer with an insert antibody (anti-turtle antibody), and locating the competitive tagged antigen either on the antibody or loosely bound on the capillary wall depending on the avidity of the reaction. 2) Optimizing the system by appropriate selection of the surface binding procedure for the reagents, selecting tagging agents based on the characteristics of the light source, and adjusting the tagging level. 3) The construction of a portable readout device based on a miniature optical bench epiillumination fluorescence system. This system uses an NA 0.50 lens to drive a silica fiber held in special clutch. It uses an optimized filter set to isolate the returning fluorescence and measure it in a specially designed silicon diode photometer. The system can detect down to picomolar concentrations of bound antigen and is thus essentially avidity limited.

12408 **Applications of holography to X-ray imaging.** Howells, M.; Iarocci, M.; Kenney, J.; Rarback, H.; Rosser, R.; Yun, W. (State Univ. of New York, Stony Brook). *Proceedings of the Society of Photo-Optical Instrumentation Engineers;* **523**: 347-354(1985). Contract AC03-76SF00098.

In this paper the authors consider various applications of holographic techniques to the problem of soft x-ray imaging. Special attention is given to imaging biological material using x-rays in the wavelength range 24-45A. The authors describe some experi-

ments on formation and reconstruction of x-ray holograms and propose some ways in which holographic techniques might contribute to the difficult problem of fabricating optical elements for use in the soft x-ray region.

12409 **Association of ferredoxin-NADP$^+$ oxidoreductase with the chloroplast cytochrome b-f complex.** Clark, R.D.; Hawkesford, M.J.; Coughlan, S.J.; Bennett, J.; Hind, G. (Brookhaven National Lab., Upton, NY). *FEBS (Federation of European Biochemical Societies) Letters;* **174**: No. 1, 137-142(Aug 1984).

The 37-kDa non-heme component in spinach cytochrome b-f complex prepared from EDTA-washed thylakoids is shown to be ferredoxin-NADP$^+$ oxidoreductase (EC1.18.1.2) on the basis of immunoreactivity, amino acid analysis, and pattern of cleavage by cyanogen bromide. Strong binding of the reductase to the isolated cytochrome complex suggests this is an important site for its attachment to the thylakoid membrane in vivo.

12410 **Quality control and technical outcome of ISO-DALT two-dimensional electrophoresis in a clinical laboratory setting.** Daufeldt, J.A.; Harrison, H.H. (Argonne National Lab, IL). *Clinical Chemistry (Winston-Salem, North Carolina);* **30**: No. 12, 1972-1980(1984). Contract W-31-109-ENG-38.

In this paper, they present initial quality-control evaluations for a prototype clinical laboratory, recommendations for clinical and technical data record-keeping, and laboratory protocols designed to minimize operator-dependent analytical error in a multiuser environment. These evaluations and recommendations are based on qualitative and semiquantitative two-dimensional electrophoresis studies of the College of American Pathologists' Reference Preparation for Serum Proteins (RPSP). They include the schematic map of RPSP and manually derived estimates of analytical precision for within-run and run-to-run performance with the standard 18 x 18 cm ISO-DALT system.

12411 **Experimental results of the dichotomic sampling in circular ring positron emission tomograph.** Cho, Z.H.; Hilal, S.K.; Ra, J.B.; Hong, K.S.; Lee, H.S.; Bigler, R.E. (Korea Advanced Institute of Science, Seoul). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-20**: No. 3, 1892-1897(Jun 1983). (CONF-821011—). Contract AC02-77EV04268.

From IEEE nuclear science symposium; Washington, DC, USA (20 Oct 1982).

Experimental verification of the new dichotomic sampling scheme was attempted and applied to a circular ring PET system to improve the sampling thereby the overall system resolution and its performances. In the experiment, two different types of aperture collimators were adopted for high resolution (HR) and very high resolution (VHR) imaging. In HR mode, a resolution of 6.5 mm FWHM was obtained without appreciable degradation in overall sensitivity which represents a threefold resolution improvement over the original system. In phantom studies with HR mode a sensitivity of 4500 counts/sec/μCi/cc was obtained for a 20 cm diameter uniform phantom filled with water. VHR mode experiment was also conducted to observe the ultimate resolution capability of DICHOTOM-I system and resolution of 4.2 mm FWHM was obtained at the expense of sensitivity reduction by a factor of four from HR mode experiment. 11 figures, 2 tables.

12412 **(DOE/ER/10637—T2) The role of membranes and transport in the salt tolerance of halobacteria.** Lanyi, J.K. (California Univ., Irvine (USA). Dept. of Physiology and Biophysics). [1986]. Contract AS03-80ER10637. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003012.

In halobacteria two light-driven membrane pumps have been investigated: bacteriorhodopsin, which extrudes protons from the cell, and halorhodopsin, a recently discovered translocator for sodium ions. Bacteriorhodopsin and halorhodopsin are retinal proteins, and upon illumination of these pigments, a series of photochemical intermediates are produced which relax within 10 to 20 msec, and in an unknown way are coupled to the vectorial uptake and release of protons or sodium ions, respectively. There is reason to believe that the main pathway of sodium transport is not halorhodopsin, however. Rapid sodium extrusion from halobacterial cells is via a sodium/proton antiporter, which, by exchanging sodium ions for protons across the membrane will utilize the energy of the proton gradient to drive sodium transport. As far as it is known, such exchange is a more widespread mechanism for sodium transport in procaryotes, but primary pumps for sodium do exist in mammalian cells, and have been suggested to operate in plants as well. 50 refs.

12413 **Isolation and characterization of new facultatively alkalophilic strains of Bacillus species.** Guffanti, A.A.; Finkelthal, O.; Hicks, D.B.; Falk, L.; Sidhu, A.; Garro, A.; Krulwich, T.A. (City Univ. of New York, New York). *Journal of Bacteriology;* **167**: No. 3, 766-773(Sep 1986).

Four facultatively alkalophilic isolates were purified from enrichment cultures initiated with lime-treated garden soil. Four isolates, OF1, OF3, OF4, and OF6, were obligately aerobic, spore-forming, gram-positive, motile rods which were capable of growth at both pH 7.5 and pH 10.5. In DNA-DNA hybridization studies show complete homology of OF4 with obligately alkalophilic Bacillus of OF4 firmus RAB. All four isolates maintained a cytoplasmic pH that was considerably lower than the external pH when the latter was 10.5. Although substantial transmembrane electrical potentials were observed, the total electrochemical proton gradient ($\Delta\mu$/sub H$^+$/) was low at pH 10.5 in all the strains. By contrast, $\Delta\mu$/sub H$^+$/ was substantial at pH 7.5 and at that pH was composed entirely of an electrical potential. All the isolates exhibited substantial rates of respiration. Neither respiration nor NADH oxidation by everted membrane vesicles was significantly stimulated by Na$^+$. Analyses of reduced versus oxidized difference spectra of membranes from OF4 showed that the total membrane cytochrome content was considerably higher in cells grown at pH 10.5 than at pH 7.5, with the levels of c- and a-type cytochromes exhibiting the largest pH-dependent differences. Initial examination of membrane protein profiles on gel electrophoresis also indicated a number of changes in pattern in each isolate, depending on the growth pH.

12414 **Direct acridine orange counting of bacteria preserved with acidified Lugol iodine.** Nishino, S.F. (Univ. of Georgia, Athens). *Applied and Environmental Microbiology;* **52**: No. 3, 602-604(Sep 1986). Contract AS09-76EV00639.

Acidified and nonacidified Lugol iodine solution was tested under several storage temperatures and at several times as a preservative for marine bacteria. Direct counts with acridine orange showed no significant difference between glutaraldehyde- and Lugol iodine solution-preserved samples under any storage temperature when samples were counted within 1 week of collection. Specimens in long-term (up to 6 months) storage required refrigeration and treatment with acidified Lugol iodine solution for adequate preservation. Lugol iodine solution-preserved bacteria appeared intact under scanning electron microscopy. Lugol iodine solution did not preserve chlorophyll autofluorescence in phytoplankton.

12415 **Macromolecular organization of F_1-ATPase isolated from Clostridium thermoaceticum as revealed by electron microscopy.** Mayer, F.; Ivey, D.M.; Ljungdahl, L.G. (Univ. of Georgia, Athens). *Journal of Bacteriology;* **166**: No. 3, 1128-1130(Jun 1986). Contract AS09-79ER10499.

Membrane vesicles and the F_1-Atpase from Clostridium thermoaceticum were examined by electron microscopy. F_1-ATPase particles projecting from the vesicles have a diameter of 10 to 12 nm. The F_1-ATPase has an$\alpha_3\beta_3\gamma\delta$ structure. The α and β subunits are most likely arranged in an alternating sequence around a central protein mass consisting of the γ and δ subunits.

12416 **Multiparameter light scattering for rapid virus identification.** Salzman, G.C.; Grace, W.K.; Gregg, C.T.; McGregor, D.M. (Los Alamos National Lab., Los Alamos, NY). pp 103-110 of Applications of circularly polarized radiation using synchrotron and ordinary sources. Allen, F.; Bustamante, C. New York, NY; Plenum Press (1985). (CONF-8405239—).

From Workshop on applicatons of circularly polarized synchrotron radiation; Albuquerque, NM, USA (18 May 1984).

This paper describes a photopolarimeter for making simultaneous angular distribution measurements of up to eight of the Mueller matrix elements from a suspension of virus particles. Calibration and a technique for the correction of artifacts is also presented. This measurement technique may have broad applications in cell biology in general and in virology in particular. It may be possible to use multiparameter light scattering to identify viruses directly from clinical specimens. Shown is a sch ematic of the multiparameter light scattering photopolarimeter and calibration.

12417 **Physiology of Azospirillum in relation to its utilization as inoculum for promoting growth of plants.** Okon, Y. (Hebrew Univ. of Jerusalem, Rehovot, Israel). pp 165-174 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

The physiological properties of Azospirillum which make azospirilla very attractive organisms for use in colonization of roots are outlined. Following plant inoculation, Azospirillum preferentially adsorbs and proliferates on and in roots. It adapts well to the complex rhizosphere environment, aided by the physiological properties outlined above. It promotes root development and mineral and water uptake by the root by mechanisms not yet described. As a result of Azospirillum inoculation, biological nitrogen fixation increases mainly after flowering, contributing small amounts of combined N to the plant and the soil. The improvement in root function results in faster accumulation of dry matter in the plant, and, in many instances, higher crop yield. Numerous field inoculation experiments with Azospirillum have led to yield increases. 45 references, 3 figures, 4 tables.

12418 **Physiological aspects of Frankia.** Benson, D.R.; Mazzucco, C.E.; Browning, T.J. (Univ. of Connecticut, Storrs). pp 175-182 of Nitrogen fixation and CO3″ metabolism: proceedings. Ludden, P.W.; Burris, J.E. (eds.). New York, NY; Elsevier Science Publishing Co., Inc. (1985). (CONF-8406343—).

From 14. Harry Steenbock symposium on nitrogen fixation and CO/sub 2/ metabolism; Madison, WI, USA (17 Jun 1984).

Although the authors understanding of Frankia metabolism has increased dramatically over the past 5 years, many central questions remain. For example, the location and regulation of nitrogenase and associated enzymes in the free-living and symbiotic microorganism remain to be determined. The interpretation of many early studies has been complicated by the lack of adequate control over growth medium or phase of growth. More recent information highlights the importance of working with healthy cultures in defined medium. In a sense, the authors knowledge of frankiae ecology (cross-inoculation groups, survival, infection process, strain variation) is at the level of rhizobia knowledge in the early 1930s. The authors knowledge of Frankia physiology on the other hand is increasing at a very rapid pace and will soon be on a par with that of Rhizobium mainly because most of the questions applied previously to rhizobia can now be applied to frankiae.

12419 **Immunogenicity of methanococcaceae and monoclonal antibody survey of their antigenic markers and relationships.** Macario, A.J.L.; de Macario, E.C. (NYSDH, Albany). *Federation Proceedings, Federation of American Societies for Experimental Biology;* **42**: 865(1983). (CONF-8604222—). Contract AC02-81ER10880.

From 70. annual meeting of the Federation of American Society for Experimental Biology; St. Louis, MO, USA (13 Apr 1986).

Methanococcus vannielii and M. voltae are two known species of Methanococcaceae of which strains SB and PSv respectively, were studied. They are methanogenic bacteria (MB). These are heterogeneous and inhabit a variety of ecological niches including the human gut. Their role in health and disease and immunological properties need elucidation. Using antibody probes from rabbit antisera, 4 clusters of antigenically related MB were found. They differ in cell-wall composition, each having a typical constituent:pseudomurein, protein, glycoprotein and heteropolysaccharide. SB and PSv are remarkable; chemical analyses indicate that they have a cell-wall made only of protein. This makes SB and PSv unique targets for immunology in areas such as evolution, taxonomy and modulation of the immune system. Both were immunogenic in rabbits and mice and serologically related with each other but not with the rest of MB, or other bacteria. A panel of monoclonal antibodies against SB was generated; 47% reacted only with SB and 53% reacted also with PSv; none bound sugars or aminosugars. Multiple testing of all MB with these antibodies indicated that some of the determinants recognized by them are markers of species, while others are of higher taxa.

12420 **Immunochemical identification of three proteinic determinants on the archaebacterium Methanococcus vannielii by monoclonal antibodies.** de Macario, E.C.; Macario, A.J.L.; Magarinos, M.C. (NYSDH, Albany). *Federation Proceedings, Federation of American Societies for Experimental Biology;* **42**: 2127(1983). (CONF-8604222—). Contract AC02-81ER10880.

From 70. annual meeting of the Federation of American Society for Experimental Biology; St. Louis, MO, USA (13 Apr 1986).

Archaebacteria evolved independently from Eubacteria and Eukaryotes and present unique biochemical features. One group, the methanogens, show a variety of cell-walls paralleling their own evolutionary diversity. Chemical analyses revealed proteins in the cell-wall of Methanococcacea but no murein or pseudomurein. Immunochemical studies were begun using a panel of monoclonal antibodies against M. vannielii SB and quantitative micro-immunoenzymatic methods developed for this purpose. Direct binding and inhibition-blocking assays using sugars and aminosugars also indicated absence of these residues in the SB's cell-wall. Three antibodies, however, recognized three different antigenic determinants involving amino acids: Lys, Phe and Thr (antibody 5A); Ser, Try and Tyr (antibody 5B); and Arg, Lys and Phe (antibody 5F). Each site was recognized by one antibody only, and vice versa. These results agree with those provided by well established chemical methods and support the notion that SB possesses a peculiar cell-wall with proteins only. The data also show the resolution power and reliability of monoclonal probes for structural analysis of the bacterial envelope.

12421 **Cell-wall immunochemistry of the archaebacterium Methanosarcina barkeri strain 227 probed with monoclonal antibodies.** Garberi, J.C.; Macario, A.J.L.; de Macario, E.C. (NYSDH, Albany). *Federation Proceedings, Federation of American Societies for Experimental Biology;* **42**: 2127(1983). (CONF-8604222—). Contract AC02-81ER10880.

From 70. annual meeting of the Federation of American Society for Experimental Biology; St. Louis, MO, USA (13 Apr 1986).

The Methanosarcinaceae have a cell-wall containing heteropolysaccharides; their chemistry is not fully elucidated, which hampers their use in research and biotechnology. The authors studied the immunogenicity and surface antigenicity of most strains available and found them closely related in accord with molecular biologic data. To clarify the structure of superficial determinants and provide a molecular basis for understanding the phylogeny of these bacteria, their interaction with other microorganisms in the ecosystems they inhabit and effects on the immune system. They prepared monoclonal antibodies against strain 227. Different determinants were identified, each one recognized by one antibody only. An immunochemical survey with antibody 8A showed that its corresponding determinant is in the cell-wall facing to the outside, and as such it is expressed only in strain 227. Its antigenicity is not detectably affected by formalin fixation but is destroyed by heat (100°C; 15 min). The determinant-bearing structure is a large molecule (MW≧ 3 x 10^5 D) which is released into the fluid phase of stored bacteria and quickly obtained by methanol extraction. It is

soluble in saline, contains carbohydrates, no detectable protein, and double-bonded C compounds which chromatograph as the lecithin and lysolecithin standards. Purification of this molecule is now on sight using insolubilized 8A antibody.

12423 (DOE/ER/13337—T1) **Use of membrane vesicles as a simplified system for studying auxin transport of auxin: Progress report.** Goldsmith, M.H.M. (Yale Univ., New Haven, CT (USA)). 1986. Contract FG02-85ER13337. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87002943.

Indoleacetic acid (IAA), the auxin regulating growth, is transported polarly in plants. IAA stimulates a rapid increase in the rate of electrogenic proton secretion by the plasma membrane. This not only increases the magnitude of the pH and electrical gradients providing the driving force for polar auxin transport and uptake of sugars, amino acids and inorganic ions, but, by acidifying the cell wall, also leads to growth. We find that auxin uptake by membrane vesicles isolated from actively growing plant tissues exhibits some of the same properties as by cells: the accumulation depends on the pH gradient, is saturable and specific for auxin, and enhanced by herbicides that inhibit polar auxin transport. We are using accumulation of a radioactive weak acid to quantify the pH gradient and distribution of fluorescent cyanine dyes to monitor the membrane potential. The magnitude of IAA accumulation exceeds that predicted from the pH gradient, and in the absence of a pH gradient, a membrane potential fails to support any auxin accumulation, leading to the conclusion that the transmembrane potential is not a significant driving force for auxin accumulation in this system. Since increasing the external ionic strength decreases saturable auxin accumulation, we are investigating how modifying the surface potential of the vesicles affects the interaction of the amphipathic IAA molecules with the membranes and whether protein modifying reagents affect the saturability and stimulation by NPA. These studies should provide information on the location and function of the auxin binding site and may enable us to identify the solubilized protein. 5 refs.

12424 (INIS-BR—559, pp 103-113) **Effects of water stress on the photosynthetic assimilation and distribution of ^{14}C-photosynthate in maize (Zea mays L.) and bean (Phaseolus vulgaris L.).** Martinez y Huaman, C.A.; Cerri, C.C. (Universidad Nacional Agraria, Lima, Peru; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The relationship between photosynthesis and distribution of ^{14}C-photosinthate as affected by water stress was evaluated. Corn (Zea mays L.) during the grain filling period and bean (Phaseolus vulgaris L.) during flowering, representing a C-4 and a C-3 photosynthetic type, respectively, were studied.

12425 (INIS-BR—559, pp 125-131) **Foliar absorption of phosphorus by common bean. Effect of sources, urea and sucrose.** Boaretto, A.E.; Muraoka, T.; Rosa, J.P.P. (UNESP, Botucatu, Brazil. Faculdade de Ciencias Agronomicas; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil; UNITAU, Taubate, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The effet of urea and/or sucrose on P uptake from H_3PO_4 and monoammonium phosphate by bean leaves. A solution containing 0.145% P and specific activity 10μ Ci/ml is sprayed early in the morning or late afternoon. Besides the treatment without urea and sucrose, these substances are added in two concentrations 0.66% N + sucrose, and 1.32% N + sucrose. Twenty four hous after application, 52% of the applied P is absorved by the bean trifoliate leaf.

12426 (INIS-BR—559, pp 159-160) **Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System.** Ruschel, A.P.; Freitas, J.R. de; Silva, P.M. (Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The hydrogen uptake in the Azolla-Anabaena system is studied. Tritium is used as tracer. Plants are incubated under different atmosphere composition: a) Air + $^3H_2$; b) Air + CO_2 + $^3H_2$ + CO; c) Air + $^3H_2$ + CO; d) Air + CO_2 + $^3H_2$ + CO to study the pathway of absorbed hydrogen in the Azolla-Anabaena system. Azolla-Anabaena showed greater hydrogen uptake under argonium atmosphere than under air. Carbon monoxide decreased hydrogen uptake. There are evidences of recycling of the hydrogen evolved through nitrogenease.

12427 (INIS-BR—559, pp 247-255) **Evapotranspiration of a corn crop (Zea mays, L.).** Calcache, M.; Engel, G. (Comision Ecuatoriana de Energia Atomica, Quito; Universidad Central del Ecuador, Quito. Facultad de Ciencias Agricolas). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The real and potential evapotranspiration of corn crop is calculated in a field experiment. The potential evapotranspiration (PET) is estimated using the Penman Method with a Type 'A' evaporation tank. The real evapotranspiration (RET) is measured using the Mass Balance Method based on periodic calculations of the volumetric moisture of the soil using a neutron probe and the matrix potential using tensiometers.

12428 **Inhibitor studies of dissimilative Fe(III) reduction by Pseudomonas sp. strain 200 (Pseudomonas ferrireductans).** Arnold, R.G.; DiChristina, T.J.; Hoffman, M.R. (California Institute of Technology, Pasadena). *Applied and Environmental Microbiology;* **52**: No. 2, 281-289(Aug 1986). Contract AS03-83ER13125.

Aerobic respiration and dissimilative iron reduction were studied in pure, batch cultures of Pseudomonas sp. strain 200 (Pseudomonas ferrireductans). Specific respiratory inhibitors were used to identify elements of electron transport chains involved in the reduction of molecular oxygen and Fe(III). When cells were grown at a high oxygen concentration, dissimilative iron reduction occurred via an abbreviated electron transport chain. The induction of alternative respiratory pathways resulted from growth at low oxygen tension (<0.01 atm [1 atm = 101.29 kPa]). Induced cells were capable of O_2 utilization at moderately increased rates; dissimilative iron reduction was accelerated by a factor of 6 to 8. In cells grown at low oxygen tension, dissimilative iron reduction appeared to be uncoupled from oxidative phosphorylation. Models of induced and uninduced electron transport chains, including a mathematical treatment of chemical inhibition within the uninduced, aerobic electron transport system, are presented. In uninduced cells re-

spiring anaerobically, electron transport was limited by ferrireductase activity. This limitation may disappear among induced cells.

12429 **Optrodes for in-vivo real time monitoring of /sub p/O/sub 2/ and /sub p/CO/sub 2/ in blood.** Miller, H.H.; Hirschfeld, T.; Miller, F. (Chemistry & Materials Science Dept., Lawrence Livermore National Lab., P.O. Box 808, Livermore, CA 94550). pp 674 of Pittsburgh conference and exposition on analytical chemistry and applied spectroscopy. Abstracts. Pittsburgh, PA; Pittsburgh Conference (1986). (CONF-860309—). Contract W-7405-ENG-48.

From 37. Pittsburgh conference and exposition on analytical chemistry and applied spectroscopy; Atlantic City, NJ, USA (10 Mar 1986).

Fiber optic sensors have been developed to measure and monitor the partial pressures of oxygen and carbon dioxide in blood via fluorescence or phosphorescence changes in sensing dyes. The CO/sub 2/ optrode uses a nanoliter size droplet of concentrated fluorescein in a buffered sodium ascorbate solution as a pH indicator. The pH of the droplet equilibrates with the volatile constituents of blood across an air bubble trapped in a capillary surrounding the fiber. The droplet is contained in a rod of passivated porous glass bound to the tip of the fiber. The ascorbic acid reduces photobleaching, which is further reduced by working on the right portion of the concentration quenching curve. Signal levels of 300,000 counts per second are obtained at 0.5 microwatt excitation power. The response of the sensor are obtained at 0.5 microwatt excitation power. The response of the sensor has been evaluated from 1.97% to 7.40% CO/sub 2/ in air at controlled humidity and temperature, giving a 61% response range under dry and humid conditions. The O/sub 2/ optrode operates by phosphorescence quenching. A polynuclear aromatic fluorescer, adsorbed on controlled pore glass on the optical fiber tip, is again contained in a trapped bubble inside a capillary. The room temperature phosphorescence of the dye is quenched by oxygen (but does not respond to halogen containing anesthetics). Signal levels of 60,000 counts per second are obtained at 1.0 microwatt excitation power, and shows a 20% response over the physiological pO/sub 2/ range. These blood gas sensors have been successfully tested in the laboratory under controlled atmospheres, as well as in animals.

Library of Congress catalog card no. 78-600123.

A self-evaluation procedure was developed for managers and labor personnel to use for the identification and prevention or control of various potential hazards in the work environment. According to the authors, most industries should benefit from the core of basic information provided. Employee-centered programs include the setting of specific goals and objectives with program elements designed to meet goals, staffing the program, employee involvement, and budgeting. Recognizing and controlling hazards requires adequate recordkeeping, inspections, priority setting, and employee incentives. Matching employees with job selection and training can be achieved through preplacement examinations, medical followup and surveillance, ergonomic studies, attention to alcohol and drug abuse, and the proper use of supervisory personnel. Effectiveness of a program can be measured through objective and subjective measurements and an assessment of relative risk factors.

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The agricultural activites being carried out so far in Venezuela are described. Failures and lessons learned from the induced mutation programme (sorghum and ajonjoli) are emphasized. Some of the results obtained with the use of isotopes in biological investigations with dairy and beef cattle and sheep are related.

12432 (INIS-BR—559, pp 167-171) **Fate of nitrogenous fertilizers in forest soil.** Pang, P.C.K. (Environment Canada, Pacific Forest Research Centre, Canada). 1984. NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The fate of the nitrogenous fertilizers through the processes of denitrification, ammonia volatilization, immobilization and uptake by a conifer is determined, with the aid of ^{15}N-labelled fertizers. The foliage of Douglas-fir was able to absorb gaseous ammonia under optimal conditions. Denitrification and immobilization of fertilizer-N by forest soil were highest with forest floor samples and decreased with depth. Laboratory studies with four-year-old Douglas-fir demostrated that a higher quantity of fertilizer-N was utilized by trees when the nitrogen was supplied as NO_3^- rather than NH_4^+.

12433 (INIS-BR—559, pp 173-181) **Use of fertilizer nitrogen by wheat in semiarid region of the Pampa, Argentina.** Lazzari, M.A.; Laurent, G.C. (Laboratorio de Humus, Departamento de Agronomia, U.N.S., Bahia Blanca, Argentina). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The efficiency of nitrogen utilization by wheat (Buck Pucara cultivar) in semiarid region of the Argentina Pampas is studied. A single-treatment-fertility-experiment is used, and in this method all treatments, as far as the plant, soil or environment are concerned, are identical. The only difference is the occurrence of the ^{15}N label within a given subtreatment.

12434 (INIS-BR—559, pp 183-194) **Fate of ^{15}N-urea and ^{15}N-ammonium sulphate applied in different periods to Cica-8 rice culture in greenhouse conditions.** Bastidas, O.G.; Alvarez, A.; Victoria, R.L.; Urquiaga C, S.; Muraoka, T. (Instituto de Asuntos Nucleares, Bogota, Colombia; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The fate of nitrogen fertilizers in rice cultivars (Cica-8) is studied. Urea (1.973% at of ^{15}N) and ammonium sulfate (1.826% at of ^{15}N) are used. The fertilizers are applied in four levels (0,100,200 and 300 Kg N/ha) in shadow conditions and after 30 days of germination.

12435 (INIS-BR—559, pp 195-203) **^{14}C-carbaril metabolism in soils modified by organic matter oxidation and addition of glucose.** Hirata, R.; Ruegg, E.F. (Instituto Biologico, Sao Paulo, Brazil. Centro de Radioisotopos). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Carbaril behaviour is studied in samples of Brunizen and Dark Red Latosol soils from Parana, using radiometric techniques, with the objective of determining the role of oxidation fo its organic components, and enrichment with glucose, in the metabolism of the insecticide. Lots of autoclaved soils, oxidized and with no previous treatment, with and without glucose addition, are incubated with ^{14}C-carbaril and analysed during eight weeks. Its was noted that, as a result of oxidation both soils showed a marked improvement in the metabolism of the agrochemical while addition of glucose exerted litlle influence on the degrading processes. Three metabolites were detected with R sub(f) 0.23, 0.40 and 0.70.

12436 (INIS-BR—559, pp 205-209) **Utilization of ^{15}N-urea by ratoon sugar-cane in the coastal plains of Pernambuco, Brazil.** Salcedo, I.H.; Sampaio, E.V.S.B. (Pernambuco Univ., Recife, Brazil. Dept. de Energia Nuclear). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

A field experiment is established at Goiana-PE, Brazil, on a Red-yellow Podzolic soil. Treatments, replicated four times, were: 1) no nitrogen; 2) 60Kg/ha of N at planting time and after plant crop harvest; and 3) 20Kg/ha of N at planting ad after plant crop harvest plus 40Kg/ha of N three months after each of these applications.

12437 (INIS-BR—559, pp 211-216) **Effects of urea foliar application and of ammonium sulphate and urea applied to the soil on yield and N utilization by beans (Phaseolus vulgaris L.).** Muraoka, T.; Victoria, R.L.; Oliveira, J.P.; Boaretto, A.E. (Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil; Empresa Brasileira de Pesquisa Agropecuaria, Goiania. Centro Nacional de Pesquisa de Arroz - Feijao; UNESP, Botucatu, Brazil. Faculdade de Ciencias Agronomicas). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The effects of nitrogen applied to the soil (as ammonium sulphate and urea) and foliar application of urea supplementing or not the soil application, on bean yield and nitrogen utilization are studied in a cerrado soil. Labelled ammonium sulphate is applied at the rate of 20Kg N/ha at seeding or 15 or 25 days after seeding and 40 Kg N/ha at seeding or in two different applications. Labelled urea is applied at the rate of 20kg N/ha at seeding and 40 Kg N/ha splitted. Foliar application is done at 15,22, 29,36 and 45 days after seeding, with 2% urea solution labelled with 10% ^{15}N.

12438 (INIS-BR—559, pp 239-246) **Evaluation of soil water and plant nitrogen status by nuclear techniques.** Reichardt, K.; Kirda, C.; Zapata, F.; Hardarson, G.; Axmann, H. (International Atomic Energy Agency, Vienna, Austria). 1984. NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Methodologies used to estimate soil water and nitrogen status of crops in field experiments are studied. Sampling procedures in a pasture experiment, consisting of three soil transects of 1.8 x 96m, one bare, one cropped to rye grass and one to alfalfa, are discussed. Data are analysed with respect to soil water contents measured through the use of neutron probes, N fertilizer uptake using ^{15}N labelled fertilizer and N_2 fixation, also using isotopic methodology.

12439 (INIS-BR—559, pp 115-118) **Systemic translocation and metabolism of ^{14}C-metalaxyl in citrus.** Musumeci, M.R.; Ruegg, E.F. (Instituto Biologico, Sao Paulo, Brazil. Centro de Radioisotopos). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Systemic uptake and translocation of ^{14}C-metalaxyl to citrus seedlings from soils (Humic Gley and Yellow Red Latosol) with different physical - chemical properties are studied. Seedlings of Citrus limonia are treated with ^{14}C-metalaxyl.

12440 (INIS-BR—559, pp 139-147) **Irradiation of foodstuffs. Possibilities and applications in agriculture.** Langerak, D.Is. From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

12463 (TVA/OACD—86/12) **Fertilizer trends: Production, consumption, and trade.** Bridges, J.D. (Tennessee Valley Authority, Muscle Shoals, AL (USA). Office of Agricultural and Chemical Development). Oct 1986. 51p. NTIS, PC A04/MF A01. File Number DE87900348.

By the end of crop year 1983, fertilizer use dropped 23% from the 1981 record of 54 million tons. In 1983, fertilizer use fell to 41.8 million tons. In 1984, fertilizer use turned upward. The resulting optimism, however, was short-lived. Following an 8-million-ton recovery, fertilizer use once again fell a million tons in 1985. The fertilizer industry faced the spring of 1986 with excess supplies. Preliminary estimates for the 1986 crop year, point to another significant decrease in fertilizer use. Instability of the domestic and export markets has caused serious trouble for the US fertilizer industry. Production capacities for all leading nitrogen products and potash have been reduced since the late 70's and early 80's. Because of increasing export demand for phosphates, capacities for the leading phosphate materials increased until 1985. However, operating rates have varied because of inconsistency in export demand.

12464 (TVA/PUB—87/3) **Estimating fertilizer application costs.** Simpson, G.S.; Williams, R.J. (National Fertilizer Development Center, Muscle Shoals, AL (USA)). Jan 1985. 15p. NTIS, PC A02/MF A01. File Number DE87900349.

Application costs vary greatly depending upon the type of fertilizer applied, the method of application, and the annual acreage over which fertilizer is applied. A common "market area" application charge does not reflect a common "cost" of applying fertilizer by dealers or custom applicators, nor does it always reflect the least-cost method to the farmer for applying fertilizer. It may reflect the price farmers are willing to apy for this service. Budgeting can be used by fertilizer dealers, custom applicators, and farmers to estimate the cost of applying fertilizer. The budget presented here is simple to set up and use and will provide either rough or close estimates. Accuracy of this or any budget depends upon the fixed and variable cost items included, how these items are calculated, and the accuracy of the cost inputs. The fixed and variable cost items included in the example are relatively complete, but other costs specific to a particular operation should be included. Also, there are many ways to compute such costs as depreciation and interest. Finally, cost coefficients or assumptions used to estimate these coefficients will greatly affect accuracy of the entire budget.

5601 Radiation Effects

REFER ALSO TO CITATION(S) 12695

12465 (AD-A—172793/2/XAB) **Thymic hormones in thymus recovery from radiation injury.** Neta; Schwartz, G.N.; MacVittie, T.J.; Douches, S.D. (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). 1985. 8p. (AFRRI-SR—86-29). NTIS, PC A02/MF A01.

The effect of a thymic hormone, thymosin fraction 5 (TF5), in restoring immunocompetence in the thymus of gamma-irradiated mice was examined. Three different mouse strains were used in this study, since previous work has established that the response to TF5 varies in different strains. To measure the rate of recovery of immunocompetent cells in the thymus, the responsiveness to comitogenic effect of interleukn-1 (IL-1) was used. This assay was chosen since it has been established that only more mature PNA, Lytl(+2-) medullary cells respond to this monokine. Contrary to several earlier reports that radio-resistant cells repopulating the thymus within the first 10 days after irradiation are mature, corticosteriod-resistant, immunocompetent cells, the thymic cells from irradiated mice in all strains used had greatly reduced responses to IL-1. Daily intraperitoneal injections of TF5 increased significantly the responses of thymic cells to IL-1 in 10-13 weeks old C57B1/KsJ, C3H/HeJ, and DBA/1 mice. Older mice, 5 months or more in age, of DBA/1 strain did not respond to treatment with TF5. However, C3H/HeJ mice of the same age were highly responsive. In conclusion, (a) cells repopulating the thymus within 12 days after irradiation contain lower than normal fraction of mature IL-1 responsive cells, (b) thymic hormones increase the rate of recovery of immunocompetent cells in the thymus, and (c) the effect of thymic hormones is strain and age dependent.

12466 (AD-A—172795/7/XAB) **Effect of gamma radiation on sodium channels in different conformations in neuroblastoma cells.** Freschi, J.E.; Moran. (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). 1986. 7p. (AFRRI-SR—86-26). NTIS, PC A02/MF A01.

The dose-response relationship between gamma radiation and batrachotoxin-stimulated sodium influx in neuroblastoma cells in tissue culture was studied. Also tested was the hypothesis that changes in sodium-channel conformation may alter the radiosensitivity of the channel. It was found that gamma radiation inhibited toxin-stimulated ^{22}Na uptake at doses beyond a threshold of 200-300 Gy. No effects were seen following doses below 100 Gy. This inhibition of sodium permeability was seen when the cells were irradiated with sodium channels in the closed or inactivated, nonconducting states. However, when the channels were in the toxin-opened, conducting state, gamma radiation had no effect at doses up to 2000 Gy. Results support earlier electrophysiological studies that showed that high doses of ionizing radiation are required to produce a measureable decrease in sodium permeability. In addition, the data suggest that by changing the sodium-channel conformation, batrachotoxin appears to alter radiosensitive chemical bonds in the gating or ion-conducting portion of the channel.

12467 (AD-A—172796/5/XAB) **Heart-function studies in dogs after acute gamma irradiation of the precordium.** Durakovic. (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). May 1986. 3p. (AFRRI-SR—86-24). NTIS, PC A02/MF A01.

In order to study the development of post-irradiation cardiac dysfunction, we irradiated the precordia of 18 adult beagle dogs were irradiated with 30, 60, or 100 Gy of Co-60 photons, and cardiac histology, electrocardiograms, Tc-99, pyrophosphate cardiac tissue distribution, and serial left ventricular ejection fraction (LVEF) were measured. Although the electrocardiograms and tissue distribution of Tc-99m were unaffected by these dose levels, the LVEF was reduced by day 58 for all the irradiated dogs. The

delay in the onset of cardiac-function impairment parallels the delay in the onset of fibrosis in irradiated hearts.

12468 **(BNL—52030) Workshop on short-term health effects of reactor accidents: Chernobyl.** (Brookhaven National Lab., Upton, NY (USA)). 8 Aug 1986. Contract AC02-76CH00016. 46p. (CONF-8608113—Summs.). NTIS, PC A03/MF A01; GPO Dep. File Number DE87003078.

From Short-term effects of reactor accidents: Chernobyl; Upton, NY, USA (8 Aug 1986).

The high-dose early-effects research that has been continued has been done in the context of infrequent accidents with large radiation sources and the use of bone marrow transfusions for treating malignancies, especially leukemia. It thus seemed appropriate to bring together those who have done research on and have had experience with massive whole-body radiation. The objectives were to review what is known about the acute effects of whole-body irradiation, to review the current knowledge of therapy, and particularly of the diagnostic and immunologic problems encountered in bone marrow therapy, and to compare this knowledge with observations made to date on the Chernobyl accident radiation casualties. Dr. Robert Gale, who had helped to care for these casualties, was present at the Workshop. It was hoped that such a review would help those making continuing clinical and pathological observations on the Chernobyl casualties, and that these observations would provide a basis for recommendations for additional research that might result in improved ability to manage successfully this type of severe injury.

12469 **(DOE/CH/10288—3) [Radiation induced changes in the cuticular hydrocarbons of the granary weevil and their relationship to dessication and adult mortality]: Quarterly report, August 15 to November 14, 1986.** (Selma Univ., AL (USA). Div. of Natural and Applied Sciences). 1986. Contract FG02-86CH10288. 11p. NTIS, PC A02. File Number DE87003683.

These studies elucidate the effective dose range for survival/life span of the weevil to select the age group and dose level required for studies on epicuticular hydrocarbon profiles. The analysis of "hydrocarbons" revealed the presence of seven fatty acids. The fatty acids ranged from C14:0 to C20:0. It was seen that when weevils were irradiated with doses 0.15 to 0.5 kgy, these were differences in quantity of the fatty acids, particularly the fatty acids C16:0, C18:2, C18:1 and C20:0. 2 figs., 3 tabs.

12470 **(DOE/EH—0026) Handbook for the Department of Energy Laboratory Accreditation Program for personnel dosimetry systems.** (USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC). Dec 1986. 39p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87003695.

The program contained in this Handbook provides a significant advance in the field of radiation protection through a structured means for assuring the quality of personnel dosimetry performance. Since personnel dosimetry performance is directly related to the assurance of worker safety, it has been of key interest to the Department of Energy. Studies conducted over the past three decades have clearly demonstrated a need for personnel dosimetry performance criteria, related testing programs, and improvements in dosimetry technology. In responding to these needs, the DOE Office of Nuclear Safety (EH) has developed and initiated a DOE Laboratory Accreditation Program (DOELAP) which is intended to improve the quality of personnel dosimetry through (1) performance testing, (2) dosimetry and calibration intercomparisons, and (3) applied research. In the interest of improving dosimetry technology, the DOE Laboratory Accreditation Program (DOELAP) is also designed to encourage cooperation and technical interchange between DOE laboratories. Dosimetry intercomparison programs have been scheduled which include the use of transport standard instruments, transport standard radioactive sources and special dosimeters. The dosimeters used in the intercomparison program are designed to obtain optimum data on the comparison of dosimetry calibration methodologies and capabilities. This data is used in part to develop enhanced calibration protocols. In the interest of overall calibration update, assistance and guidance for the calibration of personnel dosimeters is available through the DOELAP support laboratories. 20 refs., 1 tab.

12471 **(DOE/EH—0027) Department of Energy standard for the performance testing of personnel dosimetry systems.** (USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC). Dec 1986. 36p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87003696.

This standard is intended to be used in the Department of Energy Laboratory Accreditation Program (DOELAP) for personnel dosimetry systems. It is based on the American National Standards Institute's (ANSI) "Criteria for Testing Personnel Dosimetry Performance," ANSI N13.11-1983, recommendations made to DOE in "Guidelines for the Calibration of Personnel Dosimeters," Pacific Northwest Laboratory (PNL)-4515 and comments received during peer review by DOE and DOE contractor personnel. The recommendations contained in PNL-4515 were based on an evaluation of ANSI N13.11 conducted for the Office of Nuclear Safety, DOE, by PNL. Parts of ANSI N13.11 that did not require modification were used essentially intact in this standard to maintain consistency with nationally recognized standards. Modifications to this standard have resulted from several DOE/DOE contractor reviews and a pilot testing session. An initial peer review by selected DOE and DOE contractor representatives on technical content was conducted in 1983. A review by DOE field offices, program offices, and contractors was conducted in mid-1984. A pilot performance testing session sponsored by the Office of Nuclear Safety was conducted in early 1985 by the Radiological and Environmental Sciences Laboratory, Idaho Falls. Results of the pilot test were reviewed in late 1985 by a DOE and DOE contractor committee. 11 refs., 4 tabs.

12472 **(DOE/ER/60464—1) Direct assays of radiation induced DNA base lesions in mammalian cells: Technical progress report.** Wheeler, K.T. (Bowman Gray School of Medicine, Winston-Salem, NC (USA). Dept. of Radiology). 1986. Contract AC02-84ER60196;FG05-86ER60464. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003919.

HPLC techniques were used to separate, detect, identify and quantitate radiation-induced damage products of adenine (A)-containing model compounds and eukaryotic DNA. A library of 7 pure synthetic or isolated major damage products has been established consisting of 8-hydroxyadenine, 4,6 diamino-5-formamidopyrimidine, 8-hydroxy-2-deoxyadenosine, 8 hydroxy-2-deoxadenosine monophosphate, the R and S isomers of 8,5'-cyclo-2-deoxyadenosine monophosphate and α-deoxyadenosine. The structure and conformation may drastically alter the spectrum and quantity of lesions produced by ionizing radiation. This had been suggested by others on the basis of the results observed when the dinucleotides dApT and dTpA were irradiated in dilute solution. When poly (dA) and ds poly d(A-T) were irradiated under oxic conditions, the major damage product (8-OHdAdo) was the same, but the yield was different. When these compounds were irradiated under anoxic conditions, the cdAdo isomers were not the major damage products but rather α-dAdo was produced in quantities 10 to 100 times greater than the cdAdo isomers. 2 refs., 1 fig., 2 tabs.

12473 (INIS-BR—559, pp 3-12) **Alterations in biochemical and physiological characters in radiation-induced mutants of grain legumes.** Mueller, H.P. (Bonn Univ., Germany, F.R. Inst. fuer Genetik). 1984. NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Selected examples from different grain legumes are studied. The biochemically and physiologically detectable alterations in distinct characters as caused by the action of mutant genes are presented comparatively. The interactions between different mutant genes in order to evaluated the influence of the genotypic constitution on the expression of mutated genes are emphasized.

12474 (INIS-BR—559, pp 27-31) **Evaluation of gamma radiation (60-Co) induced mutation in two Phaseolus vulgaris varieties.** Silva, R.M.; Lopez, S.S.; Montepeque R, R. (San Carlos Univ. of Guatemala, Guatemala City; Direccion General de Energia Nuclear, Guatemala City, Guatemala). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Two varieties of Phaseolus vulgaris (Jutiapan and San Martin) were irradiated at 0, 8, 15, 20 and 30 kR doses in a 60-cobalt gamma source, to identify mutants and 20% lethality. M_3 plants showing morphogical mutations were selected. Differences in sensitivity to irradiation of the two varieties were noted, using data and physiological effects of M_1. Selection and analysis for protein content were in M_3 as well as hereditary changes.

12475 (INIS-BR—559, pp 37-40) **Effect of cobalt-60 gamma-ray irradiation on beans (Phaseolus vulgaris L.) of huasteco variety.** Navarro A, W. (Universidade Nacional, Faculdad Ciencias de la Tierra y el Mar, 'Campus Omar Dengo', Heredia, Costa Rica). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Bean seeds, Huasteco variety, were irradiated at 10, 20, 30 and 40 kR in a cobalt-60 gamma-ray source. Non-irradiated seeds were used as control. Irradiated and non-irradiated seeds were planted under greenhouse conditions using a random design and a population of 200 plants per treatment for both first and second generations (M_1 and M_2). The characters studied were; germination, survival, morphological changes of leaves and stem, change in seed coat colour, flowering, height, stem diameter, number of internodes, number of pods and number of seeds per pod. General plant behaviour was also observed to detect changes on a genic or chromosomic level.

12476 (INIS-BR—559, pp 91-100) **Effect of gamma irradiation (^{60}CO) on qualitative characters of barley (Hordeum vulgare).** Santana, T.C.; Gonzalez, F.C. (Centro de Genetica, Colegio de Postgraduados, Chapingo, Mexico). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Seeds of barley line were irradiated with doses ranging from O to 64 Kr of gamma radiation for three consecutive generations (R1,R2 and R3). From these, several mutant generations were obtained in the field, planting at a commercial density and without selection.

12477 (INIS-BR—559) **Proceedings of the Regional Workshop on Nuclear Techniques in Crop Production.** (Sao Paulo Univ. (Brazil); Centro de Energia Nuclear na Agricultura, Piracicaba (Brazil)). 1984. 275p. (In Portuguese). (CONF-8411283—). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441.

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Scientific studies are presented on the following subjects: plant breeding and radiogenetics, plant nutrition and biochemistry, food irradiation, entomology, soil microbiology, soil fertility and fertilizers and soil physics.

12478 (INIS-BR—559, pp 13-16) **Rubber tree resistance to Microcylus ulei through induced mutation. I. Determination of radiosensivity in rubber.** Menten, J.O.M.; Tulmann Neto, A.; Ando, A.; Cardoso, M.; Pinheiro, J. (Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil; Instituto Agronomico de Campinas, Brazil; Coordenadoria de Assistencia Tecnica Integral, Pederneiras, Brazil. Posto de Producao de Mudas). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

One meter branches with about 20 mature buds of clone RRIM 600 were treated with increasing doses of gamma radiation from a ^{60}Co source. About 100 buds were treated with O (control), 1, 2, 3 and 4 kR and grafted to stocks. The following parameters were evaluated: 'taking', height of sprouting and abnormalities (at different stages of the experiment). (M.A.C.).

12479 (INIS-BR—559, pp 17-25) **Radioinduced variation in genetic improvement of sorghum (Sorghum bicolor (L.). Moench).** Gutierrez del Rio, E. (Guanajuato Univ., Mexico). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

A genetic variability study among 25 varieties of sorghum (Sorghum bicolor (L.) Moench) is presented. The populations are irradiated with 0, 10, 20, 30, 40, 50 and 60 Krads of cobalt 60 as far as M_3 generation. An individual selection is done taking into consideration agronomic characteristics like precocity, type, size. height of the plant.

12480 (INIS-BR—559, pp 41-45) **Induction of mutation, through gamma rays, in sugarcane.** Vieira, M.A.S.; Matsuoka, S.; Ruschel, R.; Tulmann Neto, A.; Ando, A. (PLANALSUCAR, Araras, Brazil; Empresa Brasileira de Pesquisa Agropecuaria, Goiania. Centro Nacional de Pesquisa de Arroz - Feijao; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Variety buds Co-740 of sugar cane were irradiated with gamma rays ^{60}Co at 0.0, 3.0, 4.0, 5.0, 6.0 and 7.0 kR to study changes in the obtained progeny. Evaluation of the germination capacity, height of plants and morphological changes were studied in the different treatments. (M.A.C.).

12481 (INIS-BR—559, pp 47-49) **Research work to obtain pepper (Piper negrum L.) mutants resistant to Fusarium disease.** Ando, A.; Menten, J.O.M.; Tulmann Neto, A.; Albuquerque, F.C. de; Hirakata, K. (Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil; Empresa Brasileira de Pesquisa Agropecuaria, Belem. Centro de Pesquisa Agropecuaria do Tropico Umido; Instituto Experimental Agricola Tropical da Amazonia, Belem, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Cuttings of black pepper (Piper nigrum L.) variety Singapore were irradiated at different doses (from 3.0-7.0 kR) of gamma radiation in the ^{60}Co source. After two successive prunings of surviving M_1 plants (from the irradiated cuttings), hundreds of vM_3 cuttings were planted separately in pots and artificially inoculated with Fusarium solani f. piperi. The surviving vM_3 plantlets were transplanted to an experimental field highly infested with this pathogen. After two years in the infested field, only three UM_3 plants continue to grow.

12482 (INIS-BR—559, pp 51-54) **Mutation breeding for nutritional value in wheat.** Barriga, P.; Fuentes, R.; Manquian, N.; Mansilla, R. (Universidad Austral de Chile, Valdivia). 1984. (In Spanish). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

In 1981 two batches of 100,000 seeds of the spring wheat cultivars Austral and Huenufen were irradiated with gamma rays at 10 and 25 Krad doses. The source of radiation was ^{60}Co, from the Comision Chilena de Energia Nuclear. Objectives of this irradiation program were to develop wheat cultivars well adapted to the Lakes Region of Chile (latitude south 39 to 40°), whith higher content of protein and lysine and good yield. Generation M_1 was sown densily under field conditions and harvested by mass selection. Plant selection was set up in generation M_2 onwards. Selected mutants for protein content (DBC values) in generations M_2 (1982-1983) and M_3 (1983-1984) showed ranges from 18 to 22%. These contents were higher than in the controls. As regards lysine content of the proteins, the number of selected was low, however mutants with maximum lysine content overshot 4%. In M_4 generation, the better mutants, with adequate number of controls, will be analyzed in the crop season 1984-1985, in preliminary trials of production.

The technique of horizontal polyacrylamide gel electrophoresis as an alternative technique to the identification and certification of mutants with high content of protein is examined.

12483 (INIS-BR—559, pp 61-64) **Induced mutation aiming at resistance to anthracnosis in stylosanthes guianensis (Aubl) Sw. .** Jorge, E.M.P.O.; Alcantara, P.B.; Mecelis, N.R.; Ghisi, O.M.A.A.; Menten, J.O.M.; Tulmann Neto, A.; Ando, A. (Instituto de Zootecnia de Nova Odessa, Brazil; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The material used was the introduction N.O. 1336, due to its good agronomic characteristics. Radiosensitivity determination was made by irradiation of dry seeds at various gamma-ray doses in the ^{60}Co source. Based on generation plant height and survival in relation to control, two doses were chosen for the definitive treatment around GR_{35} and LD_{50}. Seeds were irradiated at these doses and planted in the field. Harvesting was carried out by mass process.

12484 (INIS-BR—559, pp 65-78) **Radiosensitivity of quince seeds (Cydonia oblonga Mill.).** Dall'Orto, F.A.C.; Ojima, M.; Hiroce, R.; Igue, T.; Ferraz, E.S.B.; Nascimento Filho, V.F. do; Menten, J.O.M.; Tulmann Neto, A.; Ando, A. (Instituto Agronomico de Campinas, Brazil; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The investigation with quince seeds (Cydonia oblonga Mill.) radiosensitivity and the mineral composition of the plants obtained for mutation breeding are related. The concentration of some macro and micronutrients in quince seedlings obtained from irradiated seeds are studied.

12485 (INIS-BR—559, pp 79-84) **Cytogenetics and radiosensitivity for quince tree breeding purpose (Cydonia oblonga Mill.).** Dall'Orto, F.A.C.; Barbosa, W.; Cruz, N.D.; Ferraz, E.S.B.; Menten, J.O.M.; Tulmann Neto, A.; Ando, A. (Instituto Agronomico de Campinas, Brazil; Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Quince cytogenetic aspects were studied to determine the level of ploidy and chromosome number, of Cydonia oblonga Mill. The existence or not of first genetic barriers which would hamper the intercross of the eight studied varieties (Acucar, Champion, Cheldow, Manning, Mato Dentro, Mendoza-INTA 37, Portugal and Smyrna) was done.

12486 (INIS-BR—559, pp 85-90) **Induced mutation in soybean (Glycine max L.) breeding.** Tulmann Neto, A.; Menten, J.O.M.; Ando, A. (Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The induced mutation in soybean (Glycine max, L.) breeding is studied. Seed treatment with gamma-rays or methanesulfonic acid ethyl ester (EMs) is used in the following varieties: Parana, Santa Rosa, UFV-1, Foscarin 31 and IAC-8. The study to obtain resistance to the soybean bud blight virus and mutants resistant to rust was done. Early mutants are also researched.

12487 (INIS-BR—559, pp 151-155) **Review and present status of the medfly program in Mexico.** Enkerlin S, D.; Liedo, P.; Ortiz, G.; Reys, J.; Schwarz, A. (Direccion de Sanidad Vegetal y Centro de Investigaciones Ecologicas del Sureste, Monterrey, Mexico; Direccion de Sanidad Vegetal, Secretaria de Agricultura y Recursos Hidraulicos, Mexico). 1984. NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

Different aspects of the Medfly Program in Mexico are discussed: the massrearing operation itself, the irradiation, packing and shipping of the sterile flies, quality control procedures, maintenance and food stocking, field operations such as release, trapping food sampling, insecticide applications and continuous research for improving the whole operation, food sampling, as well as a solid quarantine program and good working realtions with the public and with other countries.

12488 (INIS-BR—567, pp 1) **Alterations in biochemical and physiological characteres in radiation - induced mutants of grain legumes.** Mueller, H.P. (Bonn Univ., Germany, F.R. Inst. fuer Genetik). 1984. NTIS (US Sales Only), PC A06/MF A01. File Number DE87700442. (CONF-8411283—Absts.).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

12489 (INIS-BR—567, pp 6-7) **Evaluation of gamma radiation (60-Co) induced mutation in two Phaseolus vulgaris varieties.** Montepeque R, R. (Direccion General de Energia Nuclear, Guatemala City, Guatemala). 1984. (In Spanish). NTIS (US Sales Only), PC A06/MF A01. File Number DE87700442. (CONF-8411283—Absts.).

12511 (INIS-XN—54) **Epidemiological studies of groups with occupational exposure to radiation.** Davies, J.M. (Nuclear Energy Agency, 75 - Paris (France)). 1985. 44p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700438.

Also published in French.

The exposure of man to radiation and the resulting risk of carcinogenesis continues to be of concern to the public. In this context, there is often a tendency to carry out epidemiological studies concerning the induction of cancer in radiation workers and members of the public which are not supported by a statistically valid data base or whose results are misinterpreted or misused. To assist national authorities in evaluating radiological risks, the Nuclear Energy Agency has sponsored a critical review of the methodologies for, and the limitations of, these epidemiological studies, and of the precautions to be adopted in interpreting their results. Prepared by a consultant, Dr. Joan M. Davies, the review focuses on the problems encountered when carrying out epidemiological studies on groups of workers occupationally exposed to radiations, and using their results for radiological protection purposes. It is published under the responsibility of the Secretary General of the OECD, and does not necessarily reflect the views of Member Governments. The primary objective is to provide background material to be used by national authorities that have responsibilities in the field of radiological protection as well as by other persons interested in this subject.

12512 (NUREG/CR—3469-Vol.3) **Occupational dose reduction at nuclear power plants: Annotated bibliography of selected readings in radiation protection and ALARA.** Baum, J.W.; Khan, T.A. (Brookhaven National Lab., Upton, NY (USA)). Oct 1986. Contract AC02-76CH00016. 124p. (BNL-NUREG—51708-Vol.3). NTIS, PC A06/MF A01 - GPO. File Number TI87003791.

This report is the third in a series of bibliographies supporting the efforts at Brookhaven National Laboratory on dose reduction at nuclear power plants. Abstracts for this report were selected from papers presented at recent technical meetings, journals and research reports reviewed at the BNL ALARA Center, and searches of the DOE/RECON data base on energy-related publications. The references selected for inclusion in the bibliography relate not only to operational health physics topics but also to plant chemistry, stress corrosion cracking, and other aspects of plant operation which have important impacts on occupational exposure. Also included are references to improved design, planning, materials selection and other topics related to what might be called ALARA engineering. Thus, an attempt has been made to cover a broad spectrum of topics related directly or indirectly to occupational exposure reduction. The report contains 252 abstracts and both author and subject indices.

12513 (NUREG/CR—4754) **Value-impact study for implementation of a portable health physics instrumentation performance standard.** Merwin, S.E.; Swinth, K.L.; Herrington, W.N. (Pacific Northwest Lab., Richland, WA (USA)). Dec 1986. Contract AC06-76RL01830. 78p. (PNL—6025). NTIS, PC A05/MF A01 - GPO. File Number TI87003813.

The American National Standards Institute (ANSI) Standard N42.17A "Performance Specifications for Health Physics Instrumentation - Portable Instrumentation for Use in Normal Environmental Conditions" establishes minimum acceptable performance criteria for health physics instrumentation used in ionizing radiation fields. If the standard is adopted, Nuclear Regulatory Commission (NRC) and Agreement State licensees may be required to use instruments that meet ANSI N42.17A performance testing criteria. This report examines the costs and benefits of three potential NRC actions that would encourage industry-wide acceptance of the standard. These alternatives are: (1) NRC regulation requiring licensees to use instruments that have successfully passed performance testing against ANSI N42.17A, (2) recommending and encouraging the use of such instruments through publication of a regulatory guide endorsing ANSI N42.17A, and (3) taking no regulatory action and relying on a voluntary industry program. In this report, these alternatives are analyzed with respect to their probable impacts on NRC and Agreement State licensees. The net benefit of each option is estimated and a course of action is recommended. The purpose of this report is to recommend the best course of action available to the NRC based on the expected benefits from implementing ANSI Standard N42.17A. 46 refs., 24 tabs.

12514 (PNL-SA—14187) **Optical readout method for solid-state dosemeters.** McDonald, J.C.; Eichner, F.N.; Stahl, K.A.; Miller, S.D. (Pacific Northwest Lab., Richland, WA (USA)). Jul 1986. Contract AC06-76RL01830. 13p. (CONF-860806—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003405.

From 8. international conference on solid state dosimetry; Oxford, UK (26 Aug 1986).

The readout of solid-state dosemeters is usually accomplished by heating to produce thermoluminescence. This technique has several disadvantages including stressing the dosemeter crystals, melting Teflon enclosures, and destroying the thin dosemeters designed for beta particle measurements. An optical readout method is being developed to avoid these difficulties. Standard dosemeters were irradiated to a dose of approximately 0.02 Sv with ^{137}Cs gamma rays. The dosemeters were then irradiated with light produced by a high-intensity xenon lamp. Various wavelength bands, from the ultraviolet through the visible and to the near-infrared, were used. The degree of trap emptying was found to be proportional to the total optical power incident. With the intensities used in the preliminary experiments, over 90% trap emptying was achieved. This new technique will prove useful for dosemeters that are encased in plastic for automatic processing. The details of this optical readout method, along with some possible applications in neutron and beta dosimetry are described. 7 refs., 3 figs.

12515 (PNL-SA—14415) **Statistical analysis of health effects on workers at Hanford.** Gilbert, E.S. (Pacific Northwest Lab., Richland, WA (USA)). Oct 1986. Contract AC06-76RL01830. 17p. (CONF-8610179—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003098.

From Washington State Public Health Association meeting; Pasco, WA, USA (23 Oct 1986).

A cohort study of workers employed by DOE contractors at Hanford is reported. The main reason for studying these workers is to determine if the exposure received as a part of their jobs has resulted in adverse health effects. Because workers at Hanford generally live as well as work in the community surrounding Hanford, this study provides some information regarding that question as well. Health effects data are limited to mortality data. It's very difficult to obtain reliable data on non fetal diseases, especially since

Washington does not have a state-wide tumor registry. This limitation is especially important in addressing questions regarding the releases of iodine 131 that occurred at Hanford in the forties and early fifties. The largest exposures from iodine 131 would be to the thyroid. Thyroid cancer and other thyroid diseases are not often fatal. Even mortality data, that is information on when workers die and what they die of, is not that easy to obtain, especially for workers who may die many years after leaving Hanford. In this study, information has been obtained primarily by periodic searches of Social Security Administration files for claims regarding former Hanford workers. 6 tabs.

12516 **Distribution of label after intragastric administration of ^{7}Be-labeled carbon to weanling and aged mice (42318).** LeFevre, M.E.; Joel, D.D. (Brookhaven National Lab., Upton, NY). *Proceedings of the Society for Experimental Biology and Medicine;* **182**: No. 1, 112-119(May 1986). Contract AC02-76CH00016.

Single doses of ^{7}Be-labeled carbon particles prepared by proton bombardment of carbon black were administered by gavage to weanling (4 weeks) and aged (18 months) mice. Body distribution of ^{7}Be radioactivity was determined 4 hr and 1, 2, 5 and 14 days later. The results were compared with those obtained after administration of a solution of $^{7}BeCl_2$. ^{7}Be radioactivity in nonintestinal tissues was 17-58 times greater in mice gavaged with the soluble salt than in those gavaged with the particles, indicating that particle-bound ^{7}Be was well confined to the gastrointestinal tract. Upper limits of the amount of labeled carbon remaining in intestinal Peyer's patches were as follows: 1 day: weanling, 1.8×10^{-3}%, old, 5.5×10^{-3}%; 15 days: weanling, 3.3×10^{-5}%, old, 8.4×10^{-5}%. The particles are potentially useful as models for diesel emissions or other particulate pollutants.

12517 **(AD-A—173549/7/XAB) Research and development on inhalation toxicologic evaluation of red phosphorus/butyl rubber combustion products.** Aranyi. (IIT Research Inst., Chicago, IL (USA). Life Sciences Div.). Dec 1984. 533p. (IITRI-L—06139). NTIS, PC A23/MF A01.

Combinations of exposure concentrations, durations and frequencies were tested in four-week inhalation exposures followed by two weeks of recovery to define the interactive effects of these variables on biologic responses and to select the most-sensitive biologic response parameters for the subsequent subchronic studies. Response surface modeling was used for the experimental design and statistical analysis of the data. Results of preliminary testing suggested that exposure duration and frequency did not have major effects. Subsequently, male and female Sprague-Dawley rats were exposed in separate studies to RP/BR aerosols ranging from 0.40 to 1.20 mg/1 or to filtered air for 2.25 hr/day on four days/week for four weeks. Test-atmosphere monitoring data demonstrated that aerosol concentrations were consistently within 4% of the target values and mean particle size ranged from 0.44-0.64 μm with mean sigma g's of 1.66-1.97. During the exposure period, wheezing and labored breathing were observed in male rats exposed to the high dose. Decreased body weights, body weight gains and reduced food consumption seen in male rats only at all concentration levels during the exposures returned to normal after the recovery period. Various biological endpoints were examined within 1-hr after the last exposure, and for selected treatment groups after a 14-day recovery period.

12518 **(ANL/AA—32) Assessing the risks to young children of three effects associated with elevated blood-lead levels.** Wallsten, T.S.; Whitfield, R.G. (Argonne National Lab., IL (USA)). Dec 1986. Contract W-31-109-ENG-38. 158p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87004219.

Formal risk assessments were conducted as part of the US Environmental Protection Agency's current review of the primary National Ambient Air Quality Standard for lead. The assessments focused on three potentially adverse effects of exposure to lead in children from birth through the seventh birthday: erythrocyte protoporphyrin (EP) elevation, hemoglobin (Hb) decrement, and intelligence quotient (IQ) effect. The same general strategy was followed in all three cases: for two levels of each effect, probability distributions over population response rate were estimated at a series of blood-lead (PbB) levels. These distributions were estimated from data in the case of EP elevation and from expert judgements in the cases of Hb decrement and IQ effect. Although of interest in their own right, these estimates were combined with PbB distributions to yield probability distributions over the estimated percentages of children experiencing the particular health effects. 15 refs., 24 figs., 24 tabs.

12519 **(DOE/ER/60080—1) Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86.** LaVoie, E.J. (American Health Foundation, Valhalla, NY. Naylor Dana Inst. for Disease Prevention). 23 Sep 1986. Contract AC02-82ER60080. 59p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87003414.

Methylated polynuclear aromatic hydrocarbons (PAH) often possess exceptional mutagenic and carcinogenic activity which would not have been anticipated on the basis of the activities of their unsubstituted parent hydrocarbons. Whereas minor amounts of these compounds are generally formed as combustion by-products, significantly higher levels have been found in shale and coal-derived oils. This observation and the fact that subfractions rich in methylated PAH are carcinogenic in laboratory animals prompted this study of the potential effect on health of methylated PAH. The structural features of methylated tri- and tetracyclic PAH which determine their mutagenic and/or tumorigenic potential were sought and their role in the carcinogenicity of energy-related materials was studied. Methylated fluorenes, anthracenes, phenanthrenes, and pyrenes were synthesized and used to assay mutagenicity with respect to molecular structure in S. typhimurium strains TA 98, and TA 100. 54 refs., 35 figs.

12520 **(DOE/EV/10566—7) Mechanisms of mutagenesis: Analysis through the use of alcohol dehydrogenase in Drosophila: Final report.** Sofer, W.H. (Rutgers--the State Univ., Piscataway, NJ (USA). Waksman Inst. of Microbiology). Dec 1986. Contract AC02-81EV10566. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003871.

Our original objective was to understand the mechanism of mutagenesis of several important mutagens in higher organisms. Our approach was to try to deduce this mechanism by working backwards from its final effects. The strategy that we used in an effort to carry out our studies was to make mutations in the alcohol dehydrogenase gene of Drosophila melanogaster and sequence the modified genes. Most of our work was focused on an array of mutants that we had induced with formaldehyde, a potent mutagen in Drosophila, and with ethyl methane sulfonate. Over the course of the project period we cloned and sequenced the ADH gene from four formalde-induced mutants and from one EMS mutant. We showed that the four formaldehyde-induced mutants contained small deletions within the protein-coding region of their ADH genes ranging in size from between 6 and 34 bp. The one EMS-induced mutant was shown by DNA sequencing to bear an AT to GC sequence change at a tryptophan codon near the c-terminal coding portion of the gene. These results have significantly increased our understanding of the mechanism(s) of mutagenesis in higher organisms. 20 refs., 1 fig.

12521 (INIS-BR—559, pp 119-124) **Residual effect on sugar cane ratoon of urea nitrogen foliar application to plant cane.** Trivelin, P.C.O.; Lara Cabezas, W.A.R.; Coleti, J.T. (Centro de Energia Nuclear na Agricultura, Piracicaba, Brazil; Usina Sao Jose de Macatuba, Sao Paulo, Brazil). 1984. (In Portuguese). NTIS (US Sales Only), PC A12/MF A01. File Number DE87700441. (CONF-8411283—).

From Regional workshop on nuclear techniques in crop production; Piracicaba, Brazil (19 Nov 1984).

The residual effect of urea - N, foliar applied to plant cane, on sugar cane ratoon is studied. Sets grown in drums containing washed sand are used. 180 days from planting, foliar fertilizer (43.5% urea solution) labelled with 3.95 atom % ^{15}N is applied. The first harvest is made 7 days after application and final harvest of resprouting at 123 days.

12522 **(ORNL/TM—10237) In vivo toxicity of arsenic trioxide for human cells in diffusion chambers.** Ambrose, K.R.; Butler, T.A.; Callahan, A.P.; Ferren, L.A. (Oak Ridge National Lab., TN (USA)). Dec 1986. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004054.

The diffusion chamber system was used to monitor the toxicity of trivalnet arsenic for human target cells in vivo. Cell-impermeable diffusion chambers containing human embryonic lung cells were implanted into the peritoneal cavity of hamsters that one day later were injected i.v. or i.p. with arsenic trioxide (As_2O_3) as aqueous solution (AsO_2^-). $^{74}AsO_2^-$ was employed to quantitate the concentration of arsenic reaching the chambered target cells and to describe the toxicokinetics of arsenic in the hamster. Trivalent arsenic induced a growth inhibition in the target cells with the dosage level determining the extent of inhibition at 24 h and the recovery of cell proliferation at 48 h. The maximum concentration of arsenic in the chamber fluid was detected 2 h post i.p. injection, after which the elimination of ^{74}As from the chamber fluid paralleled the decline of ^{74}As activity in the plasma of the host animal. Limited tissue distribution studies showed that arsenic was retained primarily in the pelt. 22 refs., 2 figs., 3 tabs.

12523 **(ORNL/TM—10251) Sample size and power calculations for tests on potential mutagens.** Gosslee, D.G. (Oak Ridge National Lab., TN (USA)). Jan 1987. 10p. NTIS, PC A02/MF A01. File Number DE87004044.

For the small proportions typical of many mutation studies, the ability of some statistical tests to detect real effects is poor due to the extreme conservatism of these tests of significance for small proportions. The curve separating the region where the arcsine test is conservative from the region where it is liberal is introduced in this paper. In the region where the arcsine test is conservative, the Fisher exact test is much more conservative than the arcsine test. A modification of the arcsine test is suggested to simplify the specification and calculation of sample size estimates for trials with a small proportion responding. The number of animals required with sufficient power to detect compounds which are mutagenic, as well as the power for a given number of animals, can be calculated easily. The main results are presented for equal numbers of animals in each of two groups with an indication of the formulas for groups of unequal size. 17 refs., 1 tab.

12524 **(PB—87-106241/XAB) Effects of ozone and sulfur dioxide mixtures on forest vegetation of the southern Sierra Nevada. Final report.** Taylor, O.C.; Miller, P.R.; Page, A.L.; Lund, L.J. (California Univ., Riverside (USA). Statewide Air Pollution Research Center). Mar 1986. 254p. NTIS, PC A12/MF A01.

In 1981 and 1982, a multidisciplinary study was conducted within a 32-mile zone from Oildale, CA eastward to points in the southern Sierra Nevada. Concentrations of sulfur in pine needles and lichens along transects tended to decrease with increasing elevation. Stable isotope ratios in soils and plant tissue ran counter to expectations because natural isotopic composition at greater distances is similiar to the source area. Recently germinated pine seedlings exposed to ozone and sulfur dioxide mixtures showed significant differences in root dry weight, suggesting that pollutant mixtures may affect seedling establishment. Surveys of the study area showed increased ozone damage to pines between 1977 and 1981. Sulfur dioxide did not appear to be acting jointly with ozone to cause existing injury.

12525 **(PB—87-106886/XAB) Long-term inhalation reproductive and teratogenic toxicity evaluation of nitrous oxide plus halothane. Final report.** (Hazleton Labs. America, Inc., Vienna, VA). 14 Nov 1975. 24p. NTIS, PC A02/MF A01.

The report discusses the long-term effects of exposure to nitrous oxide plus halothane on the reproductive performance of female rats and the development processes in their offspring. Exposure of mated female rats to the combinations of nitrous oxide and halothane results in reduced ovulation and implantation efficiency at the higher level of exposure during the first six days after mating and a slightly retarded development of the fetuses at both levels of exposure. Exposure to 10 parts per million (ppm) of halothane plus 500 ppm of nitrous oxide can cause toxic effects on reproduction in rats, which should be of concern to humans.

12526 **(TVA/ONRED/WRF—87/3) Bull Run Fossil Plant toxicity biomonitoring study.** Hackney, P.A.; Moses, J. (Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources). Nov 1986. 128p. NTIS, PC A07/MF A01. File Number DE87900346.

This report presents the results of toxicity testing of the whole waste discharge from the Bull Run Steam-Electric Plant ashpond. Water chemistry tests were conducted for heavy metals content and suspended solids. Both acute and chronic toxicity tests were conducted on Daphnia pulex, Ceriodaphnia spp., Pimephales promelas, Micropterus salmoides, Lepomis macrochirus, and Cyprinus carpio. (ACR)

12527 **(UCRL—95692) Testing systems for biologic markers of genotoxic exposure and effect.** Mendelsohn, M.L. (Lawrence Livermore National Lab., CA (USA)). 19 Nov 1986. Contract W-7405-ENG-48. 8p. (CONF-8610186—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003242.

From 9. symposium on statistics and the environment risk assessment and public policy; Washington, DC, USA (27 Oct 1986).

Societal interest in genotoxicity stems from two concerns: the fear of carcinogenesis secondary to somatic mutation; and the fear of birth defects and decreasing genetic fitness secondary to heritable mutation. There is a pressing need to identify agents that can cause these effects, to understand the underlying dose-response relationships, to identify exposed populations, and to estimate both the magnitude of exposure and the risk of adverse health effects in such populations. Biologic markers refer either to evidence in surrogate organisms, or to the expressions of exposure and effect in human populations. 21 refs.

12528 **Nutrient uptake and growth responses of Virginia pine to elevated atmospheric carbon dioxide.** Luxmoore, R.J.; O'Neill, E.G.; Ells, J.M.; Rogers, H.H. (Oak Ridge National Lab., TN). *Journal of Environmental Quality;* **15**: No. 3, 244-251(Jul-Sep 1986). Contract AC05-84OR21400.

One-year-old Virgina pine (Pinus virginiana Mill.) seedlings with native or Pisolithus tinctorius mycorrhizal associations were grown in pots with soil low in organic matter and in cation exchange capacity and were exposed to one of five atmospheric CO_2 levels in the range of 340 to 940 $\mu L/L$ in open-top field chambers. The mean dry weight of the seedlings increased from 4.4 to 11.0 g/plant during the 122-d exposure period. Significant increases in dry weight and uptake of N, Ca, Al, Fe, Zn, and Sr occurred with CO_2 enrichment. Greater chemical uptake was associated with greater root weight. Specific absorption rates for chemicals (uptake per gram of root per day) were generally not affected by CO_2 enrichment. The uptake of P and K was not increased with elevated CO_2, and these elements showed the greater nutrient-use efficiency (C gain per element uptake). The nutrient-use efficiency for N and Ca was not influenced by atmospheric CO_2 enrichment. Large increases in Zn uptake at high CO° suggested an increase in rhizosphere acidification, which may have resulted from the release of protons from the roots, since it was estimated that cation uptake increasingly exceeded anion uptake with CO_2 enrichment. Potassium, P, and NO_3^- concentrations in the pot leachate decreased with higher CO_2 levels, and a similar trend was found for Al and Mg. These results suggest that soil-plant systems may exhibit increased nutrient and chemical retention at elevated atmospheric CO_2.

12529 **Vertebrate fauna of the Idaho National Environmental Research Park.** Reynolds, T.D.; Connelly, J.W.; Halford, D.K.; Arthur, W.J. (Dept. of Energy, Idaho Falls, ID). *Great Basin Naturalist;* **46**: No. 3, 513-527(Jul 1986).

The Idaho National Engineering Laboratory (INEL) is an energy research and development site administered by the US Department of Energy (DOE). The Energy Reorganization Act of 1974 ordered the US Energy Research and Development Administration (precursor to DOE) to engage in environmental research related to the development of energy sources to advance the goals of restoring, protecting, and enhancing environmental quality. The INEL was designated the nation's second National Environmental Research Park (NERP) in 1975 to satisfy this directive. The NERP provides a controlled, protected, outdoor laboratory for environmentally related research to help achieve national environmental goals as stated in the National Environmental Policy Act (NEPA) of 1969. The NERP charter presents broad objectives which, in part, require that each NERP serve as a bench mark for quantitatively assessing and predicting the environmental impact of man's activities. The compilation of baseline data, including species lists and identification of ecological communities, is fundamental to the NERP objectives. Much of the research on individual species of wildlife found on the Idaho NERP has been published in the scientific literature or presented in theses, dissertation, or reports (vide Markham 1973, 1978, 1983). This paper represents a consolidation of those findings which, combined with unpublished information provide baseline data on the abundance, distribution, habitat preference and seasonal occurrence of the vertebrate species recorded on the Idaho NERP. 79 references, 1 figure, 4 tables.

12530 **Assessing and managing the risks of accidental releases of hazardous gas: a case study of natural gas wells contaminated with hydrogen sulfide.** Layton, D.W.; Cederwall, R.T. (Lawrence Livermore National Lab., CA). *Environment International;* **12**: No. 5, 519-532(1986). Contract W-7405-ENG-48.

Natural gas wells contaminated with the toxic gas hydrogen sulfide (i.e., sour-gas wells) pose potential health risks to workers and to nearby residents. The health risks are a function of the dose-response relationship of hydrogen sulfide, the likelihood of accidental releases, gaseous emission rates, the nature of releases at the well head, dispersion of the emitted gas, and the characteristics of the population at risk. Each of these factors are discussed and a risk analysis is presented of a hypothetical sour-gas well in the vicinity of Evanston, WY. It was found that the greatest risks for life-threatening effects would occur in the north-west downwind sector after a horizontal release of gas at the well. Subacute effects (e.g., respiratory irritation) after a vertical release of gas would occur primarily to the northeast. Management of health risks involves the use of techniques for preventing inadvertent releases and methods for limiting population exposures.

12531 **Overall and regional lung function in dogs exposed acutely to ozone.** Morgan, M.S.; Meyer, P.; Holub, R.; Frank, R. (Univ. of Washington, Seattle). *Environmental Research;* **38**: No. 2, 546-557(Dec 1985).

Regional distribution of ventilation and overall function of the lungs were compared in anesthetized, paralyzed, mechanically ventilated dogs exposed to ozone. Three animals were exposed at each concentration (0. 0.13, 0.22, and 0.45 ppm ozone) for 3 hr. There were no significant changes in pulmonary flow resistance, dynamic compliance, or flow rates derived from maximum forced expiratory maneuvers. The distribution of inspired gas was determined using air containing ^{13}N and a positron camera to follow wash-in in each of 80 or more regions of the lung. The mean wash in time (T) and its standard deviation did not change in sham-treated dogs, but T increased by 40 to 100% in exposed animals. Dogs showing increases in T also had increased frequency dependence of compliance. The changes in ^{13}N wash-in reflected less uniform distribution of ventilation, with the greatest disparity occurring between central and marginal regions. Altered regional mechanical function, in the absence of overall changes, suggested that the initial effect of ozone was on the small airways. The measurement may be a sensitive indicator of acute irritation in the lung periphery.

12532 **(LA—10812-MS) Injury mortality among employees of Los Alamos National Laboratory: A pilot study.** Wiggs, L.D.; Weber, C.A.; Wilkinson, G.S. (Los Alamos National Lab., NM (USA)). Nov 1986. Contract W-7405-ENG-36. 27p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87003803.

Although injuries compose the fourth leading cause of death among the US population, little is known about this important cause of death. For this reason, we investigated mortality from injuries among a cohort of 23,217 Los Alamos National Laboratory employees. Characteristics of Laboratory employees dying from injuries were described and compared with those dying from noninjury causes. Special emphasis was placed on comparing job-related deaths with non-job-related deaths. A comparison of injury deaths with noninjury deaths showed no differences in sex or race. Significant differences were observed for education, duration of employment, and age at death, with persons dying from injury better educated, more likely to be employed at least one year, and more likely to die at an earlier age. When education was examined further, we found significantly more suicides and air/space accidents among college-educated members of the cohort and more motor vehicle fatalities among persons without a college degree. In this cohort, we identified 45 work-related deaths (all white male), 29 of which occurred during employment with the Los Alamos National Laboratory. A comparison of job-related injury deaths with non-job-related deaths, showed no differences in education. Suicides and motor vehicle accidents were predominant among non-job-related deaths, whereas the categories of other accidents (explosions, electrocutions, machinery accidents, and radiation accidents) and air/space accidents were th leading causes among the deaths on the job. We observed no differences in job classification when job-related deaths were compared with non-job-related deaths. 5 refs., 19 tabs.

12533 **(CBPF-NF—082/85) Geochronologic (K-Ar/Fission track) east-west profile of the Rio Grande do Sul shield.** Poupeau, G.; Baitelli, R.; Berbert, M.; Soliani Junior, E.; Kawashita, K.; Cesar, M.F. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro; Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Geociencias; Sao Paulo Univ. (Brazil). Inst. de Geociencias; Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)). 1985. 17p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700406.

An E-W sampling was executed from Pelotas to Dom Pedrito, Rio Grande do Sul state, for K-Ar and Fission-track (FT) dating. Within the Dom Feliciano Orogenic Belt, from pelotas to Pinheiro Machado, K-Ar in biotites increase from 530m.y. to 655 m.y., with a discontinuity at the level of the approx.10Km wide Cangacu cataclastic Zone. In two samples from the Rio de La Plata Craton, at the western end of our profile, hornblendes present K-Ar ages of 1.555m.y. and 1.594m.y. FT ages in apatites record cooling of these minerals below 120 + - 20°C. From Pelotas to Pinheiro Machado, four sample present concordant ages at 270 + - 10m.y., whiel western most sample records a later event at 216 m.y. From the structure of plateau-ages it is suggested that the events dated are two positive tectonic pulses. Examination of the sedimentary of the Parana Basin confirms this interpretation. We therefore dated isotopically, for the first time in Rio Grande do Sul basement, the ages of the two tectonic pulses wich affected the sedimentation in the Parana Basin.

12534 **(DOE/ET/12139—T2) Tioga Bentonite in the Appalachian Basin: Final report.** Dennison, J.M. (North Carolina Univ., Chapel Hill (USA). Dept. of Geology). Nov 1986. Contract AS05-76ET12139. 538p. NTIS, PC A23/MF A01; 1; GPO Dep. File Number DE87003866.

The Tioga Bentonite is an interval up to 258 ft (79 m) thick with several tuff layers. The top of the Tioga middle coarse zone marks the top of the Onesquethaw Stage of the Devonian System throughout 102,000 sq mi (265,000 sq km) in the Appalachian basin. This report lists well and outcrop data for 763 localities where the Tioga Bentonite has been identified in the Appalachian basin. A series of detailed stratigraphic cross sections of the Tioga ash beds shows the internal stratigraphy of the Tioga Bentonite and its relation to overlying and underlying strata. Details of the Tioga internal stratigraphy are portrayed of a series of maps. Grain size data for biotite, quartz, feldspar, zircon, and apatite are also portrayed on maps. All maps in this report are at a scale of 1:1,000,000. In a preliminary phase of this study, the Berea pluton near Fredericksburg, Virginia was considered the best fit for an intrusive equivalent of the volcanic root for the Tioga middle coarse zone, based on thickness and grain-size data of the middle coarse zone and a compatible mineralogy and age of the Berea pluton. It is now believed that the Virginia Blue Ridge and Piedmont were thrust westward many tens of miles by the Alleghany orogeny in Permian time and that the roots of the Tioga volcano may be present only in the subsurface, piercing upward through the true basement and through the Cambrian and Ordovician strata beneath the overthrust crystalline rocks of the Piedmont near Fredericksburg, Virginia. The Tioga volcanic plume of the middle coarse zone was dispersed across the Appalachian, Michigan, and Illinois basins by winds of the Devonian southern trade wind belt, where the Tioga eruptive center was situated before North America drifted to its present location.

FT ages in apatites record the cooling of these minerals below 120+- 20°C. From Pelotas to Pinheiro Machado, four samples present concordant ages at 270+ -10 m.y., while the western sample records a later event at 216 m.y. From the structure of plateau-ages it is suggested that the events dated are two positive tectonic pulses. Examination of the sedimentary of the Parana Basin confirms this interpretation. We therefore dated isotopically, for the first time in Rio Grande do Sul basement, the ages of the two tectonic pulses which affected the sedimentation in the Parana Basin.

12536 **(ORNL/TM—9999) Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805.** Haase, C.S.; Gillis, G.A.; King, H.L. (Oak Ridge National Lab., TN (USA)). Jan 1987. Contract AC05-84OR21400. 108p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87003978.

Groundwater investigation drilling operations at ten formerly or currently used waste disposal sites in the Y-12 vicinity have been completed. A total of 4 core holes, 11 soil borings, and 55 groundwater investigation wells were drilled at identified locations. The objective of the drilling program was to characterize the geology and hydrology of the sites investigated so that an effective monitoring well network could be designed and installed. The basic approach followed at each of the sites was to identify the major features of subsurface geology and then install the necessary boreholes to investigate the hydrogeologic significance of such features. Initially, a core hole or relatively deep borehole was drilled at an up section location to determine the general components of the subsurface geology. Study of drill cores, cuttings, and geophysical logs from this initial borehole identified geohydrologically significant targets. Those identified for investigation during the second stage of drilling at a specific site include: (1) the top of the water table, (2) the interface between the base of soil and the top of weathered bedrock, (3) base of weather in the bedrock, (4) cavity zones near the base of weathering in the top of bedrock, (5) zones of high porosity in the unweathered bedrock, and (6) fractures or fractured zones within the unweathered bedrock. After the investigatory phase was completed, groundwater investigation wells were installed to provide additional subsurface geological data and to provide data on hydrostatic heads and water quality for the shallow-flow regime in soils and upper weathered-bedrock zone and for the deep-flow regimes within the bedrock below the zone of significant weathering. 24 refs., 16 figs., 3 tabs.

12537 **Smoothing unit vector fields.** Mendoza, C.E. *Mathematical Geology;* **18**: No. 3, 307-322(Apr 1986).

Data, each consisting of a unit vector and a position, are modeled as a smooth unit vector field plus random directional errors; the smooth unit vector field is estimated by fitting a spline to observations. The estimate is nonlinear; it is obtained with an iterative procedure in which, at each step, a least-squares smoothing spline is fitted to a set of pseudovalues. The resulting estimate is exemplified with a data set extracted from the literature in geology. The proposed estimate is compared, using the same data set with that obtained through suggestions of other authors, and is found to have attractive qualities. The use of plots of the resulting estimate to find the appropriate value of the smoothing parameter is emphasized throughout.

12538 (CONF-8604196—Summs., pp 389-412) **Excitation, propagation, and detection of L/sub g/, S/sub n/, and P/sub n/ seismic waves from EUS earthquakes by regression analysis of RSTN data.** Goncz, J.H.; Dean, W.C. (Teledyne Geotech Alexandria Labs., VA). Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

In the course of studying the RSTN detection threshold the authors developed a technique using regression analysis that seems to yield much new information about the excitation and propagation of regional phases in EUS. Vertical component seismograms extending in time from before P arrival to after L/sub g/arrival were comb-filtered, and the maximum rectified signal amplitudes at predicted P/sub n/, S/sub n/, and L/sub g/ arrival times were picked. Nine filter f/sub k/ span the frequency range from 0.4 Hz to 20 Hz. Observed regional phase amplitudes are modeled with three parameters according to a regression model. Techniques are discussed briefly, and results are presented. 18 figures, 1 table.

12539 (CONF-8604196—Summs., pp 413-421) **Variability of regional phase properties from the Yellowknife earthquakes and aftershocks.** Hauk, T.F.; Jarpe, S.P. Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

This study was initiated to investigate the variability of regional phase properties using RSTN data of the recent Yellowknife earthquake sequence in Canada. The properties of regional phases examined were: (1) phase detection levels and their dependence on distance, (2) variations of group velocity that may hold implications for location techniques used for single station networks such as triangulation, and (3) variations in backazimuth estimates, which have

obvious application to location capabilities. This was a controlled experiment in that the data set used allows some parameters such as location propagation path and source mechanisms to be fixed so that those parameters have minimal influence on the variability of the regional phase properties to be examined. 6 figures.

12540 (CONF-8604196—Summs., pp 422-438) **Earthquakes source spectra to 15 Hz.** Chael, E.P. Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

The Miramichi, New Brunswick mainshock (m/sub bL/sub g// = 5.8) and 11 of its aftershocks were studied to determine the features of earthquake source spectra. The author analyzed the 1-15 Hz P waves of the Miramichi events as recorded at station RSNY ($\Delta = 6°$). The code of each P wave was effectively stationary for over 60 s after its onset, enabling stable estimation of the power spectrum. Spectral ratios between P waves of different events represent ratios of the source spectra, since travel paths and focal mechanisms were nearly identical for all of the records. Spectral ratios obtained from the data were compared with theoretical curves for source models with omega^{-2} and omega^{-3} roll-off above the corner frequencies. The data are in good agreement with predictions of the omega^{-2} model; the omega^{-3} model is not satisfactory, because it predicts greater variation in the spectral ratio across the 1-15 Hz band than observed. This result argues against earthquake/explosion discrimination techniques based on differences in high frequency radiation, since explosion spectra are generally believed to exhibit omega^{-2} roll-off as well. Comparison of the P-wave scaling at 15 Hz with the Rayleigh wave scaling at a period of 8 s indicated that stress drop increases slowly with seismic moment, though constant stress drop can not be definitely ruled out. 16 figures.

12541 (CONF-8604196—Summs., pp 441-450) **Detection of regional earthquakes in eastern North America using the RSTN in the frequency range 0.5 to 16 Hz.** Jarpe, S.P.; Hauk, T.F.; Nakanishi, K.K. Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

The Seismic Monitoring Research Program at LLNL is involved in an ongoing project to determine the desired characteristics of an to predict the performance of a Regional Seismic Monitoring System. The system would be used for in-country monitoring of a low-yield or comprehensive test ban treaty. The part of the project discussed here determines the detection capability of a given regional network, the RSTN, or conversely, determines what characteristics a regional network must have in order to achieve a given detection capability. For this study, the capability of the Regional Seismic Test Network (RSTN) to detect earthquakes at regional distances in eastern and central North America was assessed. This is a tectonic environment similar to that found in much of the Soviet Union. Specific questions were: (1) what phases and frequencies are most useful for regional detection? (2) What is the magnitude threshold for detection of regional events by a sparse network of 3-component stations? (3) What station spacing is necessary to adequately monitor a nuclear test ban treaty? The answers to the last two questions are closely dependent on each other and require definition of adequate monitoring and sparse station spacing. However, given those definitions, the results help answer these questions. 6 figures.

12542 (CONF-8604196—Summs., pp 451-467) **Single station detection and location of regional events.** Magotra, N.; Ahmed, N. (Univ. of New Mexico, Albuquerque, NM). Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

This paper presents a signal processing technique for event detection and source location using single station, three component, seismic data. The seismic event detection and source location (SEDSL) scheme monitors the level of coherent power in the horizontal components (North and East data channels) to detect events of interest (nuclear tests, earthquakes). Once an event is detected, SEDSL estimates the azimuth of the source as measured at the receiver (clockwise from due north), once again using the N and E data channels to perform this task. The vertical (Z) data channel is used to resolve the 180° ambiguity in the azimuth estimate. Distance to the source is determined from the time between the arrival of the P/sub n/ and L/sub g/ phases. The technique employed by SEDSL is related to the Karhunen-Loeve transform (KLT) used in data compression. It essentially searches (adaptively) the north-east plane for the direction along which the variance of the seismic data crosses an adaptive threshold. Since SEDSL is an adaptive scheme, it has various parameters that need to be tuned. Several tests were performed using synthesized and real data to determine how these parameters affect the algorithm's performance. Results of these tests indicate that SEDSL is a fairly robust scheme. 12 figures.

12543 (CONF-8604196—Summs., pp 468-478) **Core phases recorded by the RSTN.** Cummins, P. (Univ. of California, Berkeley). Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

As part of an attempt at resolving changes in material properties at the Earth's inner core boundary, the author cataloged 12 deep events in the southwest Pacific that were recorded by the RSTN in the distance range 105-140°. This spans the range of pre- to postcritical PKiKP and includes the interference head wave PKIKP + PKmIKP. The spectral amplitudes of this arrival were used to constrain the velocity gradient at the top of the inner core to be anomalously high, and some investigators suggest that broadband pulse shapes are capable of resolving fine details of Earth structure in such anamolous regions. Other studies indicate that the preferential absorption of high frequency body waves in the inner core alone with their weak dispersion is characteristic of an absorption peak that lies just above the frequency band of the available body wave data. The author hoped to confirm or deny some of these hypotheses by exploiting the short period system response of the RSTN as well as its favorable geographic orientation with respect to the above mentioned centers of seismicity. Some of the data cataloged so far are presented, as well as some of the observed spectral properties of the PKiKP + PKIKP + PKmIKP multiplet. Some of the possible implications for inner core structure are also discussed.

12544 (CONF-8604196—Summs., pp 479-503) **Direct measurement of the mantle attenuation operator from broadband P and S waveforms.** Choy, G.L. (Geological Survey, Denver, CO). Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

Broadband seismograms of body waves that are directly proportional to displacement and velocity in the frequency range from 0.01 to 5.0 Hz can not be obtained for most earthquakes of magnitude greater than about 5.5. These records are obtained either directly or through multichannel deconvolution of waveforms from digitally recording seismograph stations. In contrast to data from conventional narrowband seismographs, broadband records have sufficient frequency content to define the source time functions of body waves, event for shallow events for which the source functions of direct and surface-reflected phases may overlap. The extended bandwidth of spectral information is particularly useful for studies of frequency dependent attenuation. The RSTN Stations are crucial to such a study. Broadband P waves can be obtained from almost all GDSN and RSTN stations. However, broadband S waves are obtained, for the most part, from the RSTN stations.

12545 (CONF-8604196—Summs., pp 504-523) **Observations of body wave multipathing from RSTN data.** Chan, W.W.; Silver, P.G. (Teledyne-Geotech, Alexandria, VA). Aug 1986. NTIS, PC A23/MF A01. File Number DE86015486.

From RSTN/NORESS research symposium; Las Vegas, NV, USA (30 Apr 1986).

Subducted slabs represent the largest source of heterogeneity in the Earth mantle. The cold temperatures in the slab produce velocities 5 to 10% greater than those of the ambient mantle. Such a large velocity anomaly is known to have strong effects on both the

travel times and ray trajectories of body waves leaving intermediate- and deep-focus events. The perturbation in ray trajectory gives rise to the focusing and defocusing of seismic energy and the production of multipathing, where energy from an event arrives at a station by more than one path, giving rise to complex, long-duration signals. Using the intermediate-period channel broad-band data from the RSTN network, the authors studied body waves generated from deep-focus events in the Sea of Okhotsk region. They found that these phases are anomalously broadened and complex, which are most easily explained by multipathing. In arriving at this conclusion, they considered and rejected many other possible causes for these anomalous pulses, such as source complexity, a low-Q zone in the mid-lower mantle, a discontinuity in the lower mantle, and near-receiver structure of anisotropy. Ray-tracing results through a realistic thermal model for the slab beneath the Sea of Okhotsk indeed predicts that multipathing should be produced by the slab for the stations used.

12546 (DGMK—254, pp 5-55) **Experimental studies of the absorption of seismic waves.** Meissner, R.; Theilen, F.; Muckelmann, R.; Wiederhold, H. (Kiel Univ., Germany, F.R. Inst. fuer Geophysik). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

Absorption properties of sediments are studied by a number of different techniques. Laboratory experiments, vertical seismic profiling in boreholes, seismic measurements on land and at sea, and theoretical studies were used to reveal the absorption mechanism and the absorption properties of certain types of sediments. With 240 figs., 13 tabs.

12547 (DGMK—254, pp 57-81) **Estimation of the absorption of seismic waves.** Babbel, G. (Technische Univ. Clausthal, Clausthal-Zellerfeld, Germany, F.R. Inst. fuer Geophysik). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

The influence of the reflection coefficients on the estimation of the absorption was investigated. By means of simple synthetic examples it can be shown that they might affect the results in different ways, by increasing or decreasing the effect of the absorption. Only on condition that it is possible to separate the influence of the inelastic absorption effects and the effects of the reflection coefficients, may we obtain realistic Q-factors. Some possible methods of how this problem might be solved are discussed and tested by means of synthetic examples. The results show that in most cases the interpretation of field data can only give a rough estimate of Q. With 240 figs., 13 tabs.

12548 (DGMK—254, pp 83-119) **Determination of the attenuation of seismic waves from actual field data, as well as considerations to fundamental questions from model- and laboratory measurements.** Engelhard, L.; Doan, D.; Drews, P.; Gross, T.; Neupert, F.; Schoenfeld, U.; Dohr, G.; Sattlegger, J. (Technische Univ. Braunschweig, Germany, F.R. Inst. fuer Geophysik und Meteorologie; Preussag A.G. Erdoel und Erdgas, Hannover, Germany, F.R.; Sattlegger Ingenieurbuero fuer Angewandte Geophysik, Meppen, Germany, F.R.). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

The application of the spectral ratio and the velocity dispersion method to estimate the seismic wave attenuation has been studied in view of various sources of distortions. In detail, the frequency dependence of reflection and transmission due to the attenuation contrast, spectral side lobe distortions, interference from short-time multiples and the influence of velocity gradients were simulated and methods to resolve these problems were tested on the basis of synthetic seismograms. The methods have been applied to acoustic wavetrain data from boreholes and to surface reflection data. In the laboratory, attenuation measurements have been executes on borehole cores on the basis of the resonant bar method, including the detection of causal dispersion. Also pulse propagation methods have been applied. With 240 figs., 13 tabs.

12549 (DGMK—254, pp 121-165) **Absorption of seismic waves: Determination of attenuation from reflection seismic surveys and estimation of the attenuation of seam waves.** Knecht, M. (Prakla-Seismos G.m.b.H., Hannover, Germany, F.R.). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

In the first part of this paper the estimation of the Q-value from reflection seismograms is discussed. However, the estimation of the true intrinsic absorption is mostly difficult because structural effects cause an additional, apparent attenuation. Therefore an attempt was made to overcome this problem by using further information, namely well-data. If the reflectivity of the subsurface is known, the disturbing influences of the layered medium can be removed with sufficient accuracy. This method is discussed with the aid of synthetic and real data examples. In the second part the absorption function of seismic seam waves is derived. With 240 figs., 13 tabs.

12550 (DGMK—254, pp 167-201) **Investigations of seismic wave absorption by means of model-seismic experiments.** Behrens, J.; Kim, J.Y.; Neumann-Denzau, G. (Technische Univ. Berlin, Germany, F.R. Inst. fuer Angewandte Geophysik, Petrologie und Lagerstaettenforschung). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

This paper describes two major topics. The first is associated with an estimation of Q, the other one with a detection of lateral attenuation anomalies. A number of model-seismic measurements were performed on two-dimensional physical models. At first, using a simple measuring procedure, where source and receivers lie on a rectilinear profile, several techniques, such as amplitude decay method, spectral ratio, linear universe filter, and Wiener filter were tested. In addition, to overcome problems of interference, bandpass mapping technique was used in conjunction with a windowing operation. The attained experiences were further applied to the data obtained in vertical seismic profiling. Thereby some problems were revealed including the spectral instabilities. For the determination of lateral absorption inhomogeneities, various tomographical reconstruction techniques, such as Algebraic Reconstruction Technique, Back Projection Technique, and Simultaneous Iterative Reconstruction Technique were used. Model-seismic experiments showed that these techniques did not reconstruct the presupposed conditions exactly, but represent a possibility to detect attenuation anomalies. With 240 figs., 13 tabs.

12551 (DGMK—254, pp 203-238) **Measurements of Q on natural rock samples in different frequency ranges.** Burkhardt, H.; Paffenholz, J.; Schuett, R. (Technische Univ. Berlin, Germany, F.R. Inst. fuer Angewandte Geophysik, Petrologie und Lagerstaettenforschung). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

Apparatus and evaluation methods were developed and tested to determine the elastic and anelastic properties of sedimentary rock samples in two frequency ranges. In the seismic frequency range Young's modulus and shear modulus and the corresponding absorption factors were measured by means of stress-strain analysis. 1/Q and velocities of propagating compressional and shear waves were determined in the high frequency range 400 kHz to 5 MHz. A comparison of the results of both frequency ranges show that the saturation dependence of 1/Q is quite different, indicating that the absorption is caused by completely different mechanisms. Therefore the frequency range is of decisive importance, if absorption mechanisms are discussed. With 240 figs., 13 tabs.

12552 (DGMK—254, pp 239-276) **Experimental and theoretical petrophysical investigations on relations between the inelastic absorption in porous rocks and other petrophysical and reservoir parameters.** Schopper, J.R.; Riepe, L.; Debschuetz, W.; Jonas, M.; Kehse, R.; Pape, H.; Wehr, R. In Absorption of seismic waves (ASW). Final report.

A theoretical study has been made on different absorption mechanisms superimposed in situ, and their individual relations to common petrophysical quantities. The results have been compared with experimental data reported in the literature and within the project. Empirical findings checked well with theoretical predictions. With 240 figs., 13 tabs.

12553 (DGMK—254, pp 315-339) **Absorption of seismic waves in geothermally abnormal regions from seismic refraction data.** Grimsel, C.; Baier, B. (Frankfurt Univ., Germany, F.R. Inst. fuer Meteorologie und Geophysik). Mar 1986. Deutsche Gesellschaft fuer Mineraloelwissenschaft und Kohlechemie e.V., Hamburg, Germany, F.R.

In Absorption of seismic waves (ASW). Final report.

The absorption of seismic energy in the deeper regions of the earth's crust is essentially influenced by thermally activated processes. So data from two young rift areas - the Afar-Depression of Ethiopia and the so-called 'neovulcanic zone' of Iceland have been analysed; both have a temperature-depth gradient of around 50/sup 0/C/km. Measurements on a profile on the Ethiopian Highland served as a reference. Two techniques were tested, first the well-known method of spectral division and secondly a new method which evaluates the complex envelope of the cross-correlation-function of the wavelets in comparison. Both methods are based on the Q=const model. The results that were found indicate a Q of perhaps 400 to 800 for the Ethiopian Highland and 200 to 500 for the Afar-Depression. The Q-value of the 'neovulcanic zone' of Iceland may be of the order of 500. With 240 figs., 13 tabs.

12554 (IPT—1563) **Seismic risk map for Southeastern Brazil.** Mioto, J.A. (Instituto de Pesquisas Tecnologicas, Sao Paulo (Brazil)). 1984. 56p. (In Portuguese). NTIS (US Sales Only), PC A04/MF A01. File Number DE87700436.

During the last few years, some studies regarding seismic risk were prepared for three regions of Brazil. They were carried on account of two basic interests: first, toward the seismic history and recurrence of Brazilian seismic events; second, in a way as to provide seismic parameters for the design and construction of hydro and nuclear power plants. The first seismic risk map prepared for the southeastern region was elaborated in 1979 by 6he Universidade de Brasilia (UnB-Brasilia Seismological Station). In 1981 another seismic risk map was completed on the basis of seismotectonic studies carried out for the design and construction of the Nuclear power plants of Itaorna Beach (Angra dos Reis, Rio de Janeiro) by IPT (Mining and Applied Geology Division). In Brazil, until 1984, seismic studies concerning hydro and nuclear power plants and other civil construction of larger size did not take into account the seismic events from the point of view of probabilities of seismic recurrences. Such analysis in design is more important than the choice of a level of intensity or magnitude, or adoption of a seismicity level ased on deterministic methods. In this way, some considerations were made, concerning the use of seisms in Brazilian designs of hydro and nuclear power plants, as far as seismic analysis is concerned, recently altered over the current seismic risk panorama.

12555 (PNL-SA—13833) **Geologic spatial analysis: A new multiple data source exploration tool.** Eliason, J.R.; Thiessen, R.L. (Pacific Northwest Lab., Richland, WA (USA); Washington State Univ., Pullman (USA). Dept. of Geology). Oct 1986. Contract AC06-76RL01830. 19p. (CONF-8609200—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003303.

From 5. thematic conference on remote sensing for exploration geology; Reno, NV, USA (29 Sep 1986).

A basic research program has been initiated to develop quantitative and predictive spatial analysis techniques for determining the relationships of geological, geophysical, and geochemical structures in the solid earth. This research initially focused on the analysis of geologic data sets that can be obtained with remote sensing systems. The primary data are digital elevation models (DEM) of the terrain that are used in combination with all other map and point data to develop data sets in a three-dimensional coordinate system. The final analysis relies on programs that have been developed to determine structural correlations of point, string, and vector data. The programs can accept seismic hypocenters, lithologic contacts, lineaments, mapped structures, crustal fractures, geochemical data, and geophysical data in digital form. In addition, a unique analysis of DEM data can be performed to determine fracture planes directly. Data input is in the form of digital three-dimensional coordinates of point, string, and vector data. Much of the required data, including the elevation model, can be provided by remote sensing techniques. Analysis of an area can provide three-dimensional structural data on folding, faulting, and fracturing. These structural characteristics can be related directly to map locations for planning and directing field studies and can also be used to evaluate geochemical and geophysical anomalies. The analysis also provides key data for interpreting regional and local stress fields, which are controlling deformation and fracturing processes. These output products can contribute directly to the maximum use of available data in planning and conducting an exploration program.

12556 (USGS-OFR—86-576) **Preliminary study of quaternary faulting on the east side of Bare Mountain, Nye County, Nevada.** Reheis, M.C. (Geological Survey, Denver, CO (USA)). 1986. Contract A108-78ET44802. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003844.

Active faults bound the east side of Bare Mountain. Geomorphic features, stratigraphy, and soil development indicate that two 3-km-long segments of the range-front fault probably last moved in Holocene or late Pleistocene time. Other segments of the fault have been quiescent since the late Pleistocene. Both late Pleistocene and Holocene deposits bury many faults east of the northern end of Bare Mountain. Two prospect pits on the range-front fault reveal evidence of recurrent late Quaternary movements. Both older and younger deposits in one pit are faulted, but fractures in the older unit do not extend up into the younger unit. Based on soil development, the older and younger fault episodes respectively are probably late Pleistocene and Holocene in age. Another pit shows carbonate-cemented fractures with slickensides in a late Pleistocene deposit, suggesting at least two late Pleistocene or Holocene fault movements. Middle to early Pleistocene and Tertiary deposits show evidence of recurrent faulting in many locations. Faults in these deposits are pervaded by secondary $CaCO_3$ and silica that commonly exhibit slickensides.

In Absorption of seismic waves (ASW). Final report.

Measurements of the complex shear modulus have been performed at various ultrabasic and basic rocks (dunite, peridotite, gabbro, and basalts) and a synthetic forsterite at temperatures between 600/sup 0/ and 1500/sup 0/C (depending on the sample material) and in the frequency range from 0.003 to 30 Hz under forced torsional oscillations. The maximum shear stress was 0.3 MPa and the deformations were of the order 5 . 10/sup -6/ to 5 . 10/sup -5/. Measurements of the electrical resistivity as a function of temperature have been carried out together with the mechanical experiments to indicate the beginning of partial melting. With 240 figs., 13 tabs.

12558 **(LA—10802-MS) Chemistry of diagenetically altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nye County, Nevada.** Broxton, D.E.; Warren, R.G.; Hagan, R.C.; Luedemann, G. (Los Alamos National Lab., NM (USA)). Oct 1986. Contract W-7405-ENG-36. 164p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87003802.

The chemistry of diagenetically altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nevada is described. These tuffs contain substantial amounts of zeolites that are highly sorptive of certain radionuclides. Because of their widespread distribution, the zeolitic tuffs could provide important barriers to radionuclide migration. Physical properties of these tuffs and of their constituent zeolites are influenced by their chemical compositions. This study defines the amount of chemical variability within diagenetically altered tuffs and within diagenetic minerals at Yucca Mountain. Zeolitic tuffs at Yucca Mountain formed by diagenetic alteration of rhyolitic vitric tuffs. Despite their similar starting compositions, these tuffs developed compositions that vary both vertically and laterally. Widespread chemical variations were the result of open-system chemical diagenesis in which chemical components of the tuffs were mobilized and redistributed by groundwaters. Alkalies, alkaline earths, and silica were the most mobile elements during diagenesis. The zeolitic tuffs can be divided into three compositional groups: (1) calcium- and magnesium-rich tuffs associated with relatively thin zones of alteration in the unsaturated zone; (2) tuffs in thick zones of alteration at and below the water table that grade laterally from sodic compositions on the western side of Yucca Mountain to calcic compositions on the eastern side; and (3) potassic tuffs at the north end of Yucca Mountain. Physical properties of tuffs and their consistuent zeolites at Yucca Mountain may be affected by variations in compositions. Properties important for assessment of repository performance include behavior and ion exchange.

12559 (ORNL—6261, pp 162-165) **Nuclear waste chemistry.** May 1986. NTIS, PC A10/MF A01. File Number DE86011391.

In Chemistry Division annual progress report for period ending January 31, 1986.

Several research topics in the Chemistry Division are directly related to chemical problems of high-level radioactive waste disposal. Safety analyses of radioactive waste disposal depend upon reliable prediction of radionuclide migration in the event of penetration of the nuclear waste repository by groundwater and flow of the groundwater to the accessible environment. Prediction of the migration rates of nuclides within host geological formations is dependent upon knowledge of sorption properties and chemical speciation of the nuclides. Programs are described for evaluation of the parameters affecting the sorption of Tc, Np, U, Sr, and Cs. Knowledge of the solubilities of nuclides, especially for reducing repository environments, is necessary for prediction of maximum concentrations of nuclides in the groundwaters. Solubility studies of Tc(IV) oxides are summarized. Other types of chemical support for assessment and evaluation activities are presented. 10 refs.

12560 **Uniaxial and triaxial mechanical experiments on rock salt samples from three gulf coast domes.** Price, R.H. (Geomechanics Division, Sandia National Laboratories). *Geophysical Research Letters;* **13**: No. 10, 1031-1034(Oct 1986).

Seventeen quasi-static experiments on rock salt from three gulf coast domes are presented. The experiments were run at a constant loading rate in compression and extension, over pressures ranging from 0.1 to 13.8 MPa and temperatures ranging from 22 to 100°C. Minor variations in sample grain sizes and composition did not appear to have distinct effect on strength and behavior trends. Specimen strength was directly related to the least principal stress and inversely related to temperature; furthermore, pressure and temperature increases resulted in larger axial strains to failure (ductility). While strengths in extension and compression were similar, ultimate strains were substantially higher in compression than in extension.

12562 **(AD-A—172609/0/XAB) Structure of the extended emission in the infrared celestial background.** Price, S.D. (Air Force Geophysics Lab., Hanscom AFB, MA (USA)). 30 Sep 1986. 16p. (AFGL-TR—86-0195). NTIS, PC A02/MF A01.

The extended emission in the infrared celestial background may be divided into three main components: the zodiacal background, the large discrete sources in the galaxy, and the interstellar dust. The zodiacal background is due to the thermal reradiation of sunlight absorbed by the dust in the solar system. An earth-orbiting infrared telescope will detect the diffuse emission from this dust in all directions with maximum intensity lying roughly along the ecliptic plane where the density of dust is highest. Structure with scale lengths of 10° was measured in both the visual and infrared; finer structure was detected in the infrared by the Infrared Astronomy Satellite. H II regions, areas of ionized gas mixed with and surrounded by dust, are the brightest discrete objects in the galaxy in the long wavelength infrared re-emitted in the infrared with a range of temperatures characteristic of the thermal equilibrium for the surroundings of the dust. The emission from the interstellar dust produces a filimentary structured background, the infrared cirrus. The observed far-infrared color temperature of about 20-35K for the cirrus is consistent with emission-form graphite and silicate grains which absorb the interstellar radiation field. The much-larger LWIR color temperature is likely due to a greater abundance of sub-micron particles in the interstellar medium and, perhaps, from band emission due to polycyclic aromatic hydrocarbons. These galactic planes have full width at half maxima of about 2°.

12563 **(AD-A—172937/5/XAB) Narrow-band, slowly varying decimetric radiation from the dwarf M flare star YZ Canis Minoris.** Lang, K.R.; Willson, R.F. (Tufts Univ., Medford, MA (USA). Dept. of Physics and Astronomy). 1 Mar 1986. 8p. NTIS, PC A02/MF A01.

Narrow-band slowly varying microwave radiation has been detected from the dwarf M star YZ Canis Minoris at frequencies near 1465 MHz. This quiescent, or nonflaring, emission cannot be

attributed to gyroresonant radiation from coronal loops; the loops would have to be more than 200 times the stellar radius in size with magnetic field strengths of H > or = 100 G at this distance. The narrow-band structure (Delta nu/nu > or = 0.1) of the slowly varying radiation cannot be explained by continuum emission processes. These observations may be explained by coherent burst mechanisms like electron-cyclotron masers or coherent plasma radiation. Maser action at the second harmonic of the gyrofrequency implies a longitudinal magnetic field strength of 250 G and an electron density of N/sub e/ = approx. 6 x 10^9/cm^3. Coherent plasma radiation at the second harmonic of the plasma frequency similarly requires N/sub e/ = approx. 6 x 10^9/cm^3 but a longitudinal magnetic field strength of H/sub L/ << 250 G. The slow variation of the narrow-band emission might be explained by the stochastic nature of continued low-level, coherent burst activity. There are possible analogies with narrow-band decimetric bursts observed on the Sun.

12564 **(AD-A—173265/0/XAB) Coronal plasmas on the sun and nearby stars.** Lang, K.R. (Tufts Univ., Medford, MA (USA). Dept. of Physics and Astronomy). 1 Sep 1986. 12p. NTIS, PC A02/MF A01.

The Very Large Array(VLA) was used to observe solar microwave sources with second-of-arc angular resolution. Both the quiescent, or nonflaring, microwave sources and the flaring ones are usually resolved. They are often associated with the apex and/ or legs of the ubiquitous coronal loops, which heretofore have been observable only with x ray telescopes sent above the atmosphere. Multiple-wavelength VLA observations can specify the strength, evolution and structure of the magnetic fields in coronal loops, while also providing constraints on the electron density and electron temperature of the plasma trapped within the coronal loops. The next section briefly reviews the thermal radiation mechanisms that account for most of the quiescent emission, while also pointing out that current-amplified magnetic fields or non thermal radiation may be required in some instances. This is followed by a discussion of the 20 cm radiation of coronal loops and the thermal-cyclotron lines that accurately specify their magnetic field strength. The 20-cm and x-ray emission of the coronal plasma are then compared. The coronae of nearby stars are discussed where coherent radiation processes seem to prevail.

12565 **(AD-A—173279/1/XAB) Compact, variable, moving sources on the sun at 2-cm wavelength.** Lang, K.R.; Willson, R.F. (Tufts Univ., Medford, MA (USA). Dept. of Physics and Astronomy). 1 Sep 1986. 8p. NTIS, PC A02/ MF A01.

The high angular resolution provided by the Very Large Array (VLA) permitted the spatial resolution of solar microwave sources and opened the way for comparisons with observations of similar angular resolution at optical and x-ray wavelengths. High-resolution VLA observations of solar-active regions at relatively long wavelengths of 6 cm and 20 cm have, for example, led to the discovery of the microwave counterpart of the ubiquitous coronal loops that had previously only been observed by x-ray telescopes lofted above the Earth's atmosphere. The microwave emission of the coronal loops is attributed to the gyroresonant radiation and / or the bremsstrahlung of million-degree thermal electrons trapped within the loops by strong magnetic fields; observations of this emission have provided valuable new insights into the nature of solar-active regions and eruptions from the Sun and nearby stars. In contrast, the short-wavelength 2-cm emission of solar-active regions is poorly understood. In spite of numerous VLA solar observations at 2 cm, there are only two published results. In both instances, compact (angular sizes about 15 sec.), highly polarized (degree of circular polarization 80% to 90%) sources were found in regions of strong magnetic field strength (H about 2000 G) above sunspots.

12566 **(AD-A—173330/2/XAB) Solar gradual hard x-ray bursts and associated phenomena.** Cliver, E.W.; Dennis, B.R.; Kiplinger, A.L.; Kane, S.R.; Neidig, D.F. (Air Force Geophysics Lab., Hanscom AFB, MA (USA)). 15 Jun 1986. 17p. (AFGL-TR—86-0215). NTIS, PC A02/MF A01.

From an examination of the white light coronagraph, H/sub alpha/, and radio (microwave, decimetric, and metric) data associated with a sample of 10 gradual hard x-ray bursts (GHBs) observed with the Hard-X-Ray-Burst Spectrometer on SMM and the x-ray detector on ISEE 3, was found the following: (1) The hard (somewhat > 30 keV) X ray photon energy spectrum began to harden near the onset of the GHBs, became systematically harder through the peak of the events, and continued to harden (or at least did not become softer) during the decay phase. (2) A coronal mass ejection (CME) was observed, or inferred to have occurred, in association with at least nine of the 10 GHBs, and CMEs appeared to precede the GHBs, by times ranging from 5 to 60 minutes. (3) The GHBs characteristically occurred in the late phase of major flares; in general, the changes in H/sub alpha/ flare brightness and area during GHBs were small and not commensurate with their associated microwave-burst peak intensities. (4) The centimeter wavelength bursts associated with the GHBs had relatively low frequency spectral maxima, and were microwave rich in relation to the observed hard x-ray emission. (5) The associated decimetric bursts typically exhibited significant intensity variations on time scales of from about 0.1 to somewhat > 1 minute, short in comparison with the somewhat > 10 minute durations of the gradual x-ray/microwave bursts. (6) The GHBs were poorly associated with the coincident metric type-II bursts and more strongly associated with type-IV or continuum events.

12567 **(AD-A—173523/2/XAB) Committee on solar-terrestrial research. Final report, 1 December 1984-30 April 86.** (National Academy of Sciences - National Research Council, Washington, DC (USA)). 16 Jun 1986. 59p. NTIS, PC A04/MF A01.

The Committee on Solar-Terrestrial Research (CSTR) of the National Academy of Sciences was able to meet through AFOSR financial support. The Committee is a unique organization for the review, planning, and coordination of research involving the sun, the interplanetary medium, the magnetosphere, the ionosphere, and high-altitude neutral atmosphere. Members from the scientific community were able to give coordinate and provide updates of their agencies implementation of the National Solar-Terrestrial Research Program. At the last meeting, committee members reviewed operations are decisions of federal agencies on solar-terrestrial research and discussed future approaches to ensure a viable research program.

12568 **(ITF—85-121-R) Production and evolution of ionized hydrogen regions in process of massive star formation.** Kravchuk, S.G. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 27p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700365.

It is shown that at the stage when protostellar envelopes are blown away dense (n sub(e)> =10sup(7) cm sup(-3)) circumstellar ionized regions having radii r sub(H long)< = 10^{14} cm are formed around stars with luminosities L < 10^4 Lsub(sun). These regions expand due to high Lysub(α) radiation pressure. Ultracompact (r sub(H long) approximately 10^{16} -10^{17} cm) H2 regions associated with OH maser sources are those which are formed around stars with Lsub(sun)> = 10^4 Lsub(sun). These objects display shell structure. At later stages compact H2 regions are formed. 27 refs.; 4 figs.

12569 **(LA-UR—86-3512) Theoretical and observational review of results on nova explosions occurring on ONeMg white dwarfs.** Starrfield, S. (Los Alamos National Lab., NM (USA); Joint Inst. for Lab. Astrophysics, Boulder, CO (USA)). 7 Jul 1986. Contract W-7405-ENG-36. 13p. (CONF-860793—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87001962.

From 2. IAP recontre on nuclear astrophysics; Paris, France (7 Jul 1986).

The nova outburst is the second most violent explosion that occurs in a galaxy. This review presents the recent observational and theoretical studies that have demonstrated that there exist two classes of nova outburst. One type of nova occurs on a CO white dwarf and the other type of nova occurs on an ONeMg white dwarf. The second class of outbursts are much more violent and occur much more frequently then the first class of outbursts. Hydrodynamic simulations of both kinds of outbursts are in excellent agreement with the observations. 51 refs.

12570 **(LA-UR—86-3796) A review of what numerical simulations tell us about the internal rotation of the sun.** Glatzmaier, G.A. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 13p. (CONF-8608137—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002915.

From National Solar Observatory symposium; Sun Spot, NM, USA (1 Aug 1986).

The simulated solar differential rotation from two independent numerical modeling efforts agree with each other and with present solar observations. The models solve the nonlinear, three-dimensional, time-dependent, anelastic equations of motion for thermal convection in a stratified, rotating, spherical shell. The simulated angular velocity in the convection zone is constant on cylinders coaxial with the rotation axis, maximum at the equator and decreasing with depth. The latitudinal variation of this angular velocity at the surface is in agreement with Doppler measurements of the solar surface rotation rate. The radial variation through the convection zone is consistent with the analysis of the rotational frequency splitting of solar oscillations. 15 refs., 5 figs.

12571 **(N—87-11651) Combined ultraviolet studies of astronomical sources. Semiannual Progress report, 1 February-31 July 1986.** Baliunas, S.L.; Dupree, A.K.; Elvis, M.; Huchra, J.P.; Kenyon, S.; Raymond, J.C. (Smithsonian Astrophysical Observatory, Cambridge, MA (USA)). Oct 1986. 11p. (NASA-CR—179784; NAS—1.26:179784; SAPR—12). NTIS, PC A02/MF A01.

Topics addressed include: Cygnus Loop; P Cygni profiles in dwarf novae; YY Gem; nova shells; HZ Herculis; activity cycles in cluster giants; Alpha Ori; metal deficient giant stars; ultraviolet spectra of symbiotic stars detected by the Very Large Array; time variability in symbiotic stars; blue galaxies; and quasistellar objects with x-ray spectra.

12572 **(N—87-11652) Far-infrared spectral studies from the G. P. Kuiper Airborne Observatory. Final Technical report, 1 October 1978-31 October 1986.** Harwit, M. (Cornell Univ., Ithaca, NY (USA)). Oct 1986. 8p. (NASA-CR—179879; NAS—1.26:179879). NTIS, PC A02/MF A01.

The grant to carry out far-infrared spectral studies of astronomical sources from the G. P. Kuiper Airborne Observatory was first funded in October 1978 and officially ended on October 31, 1986. During these eight years, a variety of previously undetected spectral lines was discovered, and these were used to determine the physical and chemical conditions prevailing in regions of active star formation. They served to clarify the nature of the ionized hydrogen regions often adjacent to star-forming clouds, the characteristics of shocks which may signify the onset of star formation, and the nature of coolants that channel away energy thus enabling a cloud to collapse to form new stars.

12573 **(N—87-11653) UV observations of blue stragglers and population 2 K dwarfs. Final Technical report, 1 July 1984-30 June 1986.** Carney, B.W.; Bond, H.E. (North Carolina Univ., Chapel Hill (USA)). 1986. 4p. (NASA-CR—179865; NAS—1.26:179865). NTIS, PC A02/MF A01.

Blue stragglers are stars, found usually in either open or globular clusters, that appear to lie on the main sequence, but are brighter and bluer than the cluster turn-off. Currently, two rival models are invoked to explain this apparently pathological behavior: internal mixing (so that fresh fuel is brought into the stellar core); and mass transfer (by which a normal main sequence star acquires mass from an evolving nearby companion and so moves up the main sequence). The latter model predicts that in the absence of complete mass transfer (i.e., coalescence), blue stragglers should be binary systems with the fainter star in a post-main sequence evolutionary state. It is important to ascertain the cause of this phenomenon since stellar evolution models of main sequence stars play such a vital role in astronomy. If mass transfer is involved, one may easily exclude binaries from age determinations of clusters, but if mixing is the cause, our age determinations will be much less accurate unless we can determine whether all stars or only some mix, and what causes the mixing to occur at all.

12574 **Cosmic-ray-produced gamma rays in planetary surfaces.** Reedy, R.C. (Nuclear Chemistry Group, Los Alamos National Lab., Los Alamos, NM 87545). pp 933-936 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

A major priority of future NASA planetary missions is the determination of the elemental compositions of solar system objects. Gamma-ray spectroscopy will probably be used soon to determine the surface compositions of Mars and other solar system objects. Neutrons induced by the cosmic rays produce many of the important γ-ray lines that escape from planets. Some measurements of the γ-rays produced by neutrons and protons with various energies have recently been made. However, many more nuclear measurements are still needed to plan for and to interpret the results from future planetary missions. Excitation functions for the production of γ-ray lines by both neutrons and protons are needed in calculating the fluxes of γ-rays in and above a planet's surface. Thick-target irradiations with high-energy protons have simulated the production of γ-rays by the cosmic rays, and more simulations are planned.

12575 **Some nuclear data needs in astrophysics.** Mathews, G.J.; Bauer, R.W.; Bloom, S.D.; Haight, R.C.; Howard, W.M.; Takahashi, K.; Ward, R.A. (Univ. of California, Lawrence Livermore National Lab., Livermore, CA 94550). pp 835-852 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

The authors discuss a number of astrophysical environments and how improved nuclear data could facilitate a better understanding of them. One area of interest includes proton and alpha-particle reactions with unstable nuclei which are necessary for understanding the nucleosynthesis and energy generation in hot hydrogen-burning environments. Efforts underway at LLNL and elsewhere to develop the technology for the measurement of these reaction rates are discussed. Heavy-element nucleosynthesis in the late stages of red-giant starts and supernovae requires a complete network of neutron capture rates and beta-decay rates favor nuclei near and far from stability. Experimental and theoretical efforts at LLNL to supply the input data and to model the nucleosynthetic environments are outlined. Suggestions are made as to which nuclear data are most critical for the various scenarios.

12576 **Radio survey of cataclysmic variable stars using the very large array.** Cordova, F.A.; Mason, K.O.; Hjellming, R.M. (Los Alamos National Lab., NM). *Publications of the Astronomical Society of the Pacific;* **95**: 69-71(Jan 1983).

Six cataclysmic variable stars were searched for 6-cm emission using the NRAO Very Large Array. The candidate stars were SS Cyg, U Gem, TT Ari, RW Sex, EX Hya, and AO Psc (H2252-035). None were detected; the flux density limits range between 0.1 and 0.4 mJy. These limits are, respectively, between a factor of 6 and 1.5 lower than the 6-cm emission detected from the magnetic binary AM Her by Chanmugam and Dulk. 17 references, 2 tables.

12577 **(AD-A—172906/0/XAB) Parallel current effects on auroral E-region plasma instabilities. Interim report.** Chaturvedi, P.K.; Huba, J.D.; Ossakow, S.L.; Satyanarayana, P. (Naval Research Lab., Washington, DC (USA)). 19 Sep 1986. 34p. (NRL-MR—5847). NTIS, PC A03/MF A01.

Consider the effect of a field-aligned current on the development of plasma instabilities in the auroral electrojet. It is found that the inclusion of the parallel current modifies the threshold criteria for the onset of the Farley Buneman instability, and may cause excitation of oblique ion sound waves. Appling these results to the

auroral E region, it is shown that they explain some observations of auroral irregularities, e.g., the presence of type I irregularities for subthreshold conditions (when the electron Hall drift is less than the ion-sound speed), and the observation of irregularities not highly field-aligned.

12578 **(AD-A—173040/7/XAB) Dynamic ionosphere over Arecibo: a theoretical investigation.** Crary, D.J.; Forbes, J.M. (Boston Coll., Chestnut Hill, MA (USA). Dept. of Physics). 1 Jan 1986. 8p. NTIS, PC A02/MF A01.

Numerical simulations of the F-region ionosphere over Arecibo, Puerto Rico, are presented. It is deduced from these simulations that the dynamic behavior of the Arecibo ionosphere, particularly the so-called midnight collapse phenomenon, is strongly influenced by the upward propagating semidiurnal tidal component of the neutral meridional wind excited below thermospheric levels. Presence of a nonlinear interactive coupling between the neutral wind and ion drag was found. The steep underside density gradients occurring in conjunction with the collapse are due to vertical shear in the meridional wind field associated with the propagating semidiurnal tide. These gradients are capable of triggering the gradient-drift instability, thus accounting for plasma irregularity formation and observations of VHF scintillations associated with the collapse phenomenon.

12579 **(AD-A—173179/3/XAB) Studies of the auroral-zone ionosphere using the MITHRAS data base. Fiscal years 1983-1985. Final report, October 1982-October 1985.** (Massachusetts Inst. of Tech., Cambridge (USA)). 26 Jun 1986. 21p. NTIS, PC A02/MF A01.

The Autmospheric Science group participated in the multi-radar MITHRAS experimental campaign. Coordinated observations of the earth's ionosphere, magnetosphere, and thermosphere were conducted using the Millstone Hill, Massachusetts, Chatanika, Alaska, and European EISCAT incoherent scatter radars in conjunction with a variety of ground-based and satellite experiments. Chatanika and EISCAT are about 11 hours apart in magnetic local time, and Millstone Hill precedes Chatanika and follows EISCAT by more than 6 hours. Each of the three radars was able to study auroal-zone latitudes, but at widely spaced longitudes. Hence the MITHRAS program was well suited to study the class of problems which involve universal time/local time ambiguities, or equivalenty, space/time differences. Set operating modes were used at the radar sites to best match the requirements of the several campaign objectives. The overall MITHRAS program was motivated by a desire to provide a well documented set of radar observations of the mid- and high-latitude ionosphere during the brief interval when three incoherent scatter facialities would be available. At Millstone Hill the MITHRAS program involved the development of specific radar operating modes and analysis techniques appropriate for multi-instrument studies. An extensive data set resulted from the campaign.

12580 **(AD-A—173300/5/XAB) Comparison of simultaneous Chatanika and Millstone Hill observations with ionospheric model predictions.** Rasmussen, C.E.; Schunk, R.W.; Sojka, J.J.; Wickwar, V.B.; de la Beaujardiere, O. (SRI International, Menlo Park, CA (USA)). 1 Jun 1986. 13p. NTIS, PC A02/MF A01.

As part of the MITHRAS program, the Chatanika and Millstone Hill incoherent-scatter radars made coordinated observations of the polar ionosphere on June 27 and 28, 1981. These data were compared with predictions made by a high-latitude ionospheric model. Qualitatively, the same features are evident in both the model and the radar data: fairly constant densities on the dayside with a mid-latitude trough forming poleward of 65° around 1900 MLT (magnetic local time). This trough is seen to extend equatorward with increasing MLT, such that the minimum densities occurring in the trough appear just after midnight around 60° dipole latitude. These features are primarily understood in terms of different regions of convection, further influenced by photoionization and vertical transport. The only areas of major disagreement between the measurements and model are noted in the auroral oval and at a portion of the times during which substorms occurred. Quantitatively, equally good agreement is obtained between the model predictions and the radar data. Densities predicted by the model are usually within 25% of those measured by the radars.

12581 **(AD-A—173539/8/XAB) Collisionless coupling in the AMPTE (Active Magnetospheric Particle Tracer Explorers) artificial comet. Memorandum report.** Papadopoulos, K.; Huba, J.D.; Lui, A.T. (Naval Research Lab., Washington, DC (USA)). 29 Sep 1986. 37p. (NRL-MR—5835). NTIS, PC A03/MF A01.

Analysis of previously reported observations of the solar-wind barium interaction associated with the AMPTE artificial comet release of December 27, 1984 is presented. Based on these results, it is argued that the solar wind couples momentum (and energy) to the barium ions through both laminar and turbulent processes. The laminar forces acting on the particles are the laminar electric and magnetic fields; the turbulent forces are associated with the intense electrostatic-wave activity. This wave activity is shown to be caused by a cross-field solar-wind proton barium-ion streaming instability. The observed wave frequencies and saturated amplitudes are consistent with theoretical analysis.

12582 **(UCRL—93077) Nonlinear conductivity induced by the passing of long intense em pulses (50 to 500 ns) near the earth's surface and in SF_6.** Yee, J.H.; Khanaka, G.H.; Mayhall, D.J. (Lawrence Livermore National Lab., CA (USA)). Nov 1986. Contract W-7405-ENG-48. 18p. (CONF-861240—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003397.

From 3. national conference on high power microwave technology for defense applications; Albuquerque, NM, USA (1 Dec 1986).

Two one-dimensional computer codes have been developed to study the passage of long intense microwave pulses through the atmosphere and SF_6. The objectives are to obtain information about the electron conductivity and density as well as plasma frequency during the passage of microwave pulses in such media. In the computer model, electrons are treated as a fluid, and their effect on the passing microwave pulse are determined via the simultaneous solution of Maxwell's equations and the electron fluid equations. The model should give fairly accurate predictions, because it takes into account such variables as ambient electron density, beam intensity, ionization (avalanche) and attachment rates, and pressure. 2 refs., 7 figs.

REFER ALSO TO CITATION(S) 11593, 11752, 12638, 12806

12583 **(AD-A—172840/1/XAB) Extreme-ultraviolet beam-foil spectroscopy of highly ionized neon and argon. Doctoral thesis.** Demarest, J.A. (Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA)). Aug 1986. 187p. (AFIT/CI/NR—86-171D). NTIS, PC A09/MF A01.

A study of the extreme-ultraviolet radiation emitted by ion beams of highly ionized neon and argon after passage through thin foils was conducted. A grazing-incidence spectrometer was equipped with a position-sensitive microchannel plate (MCP) detector, which improved the detection efficiency by two orders of magnitude. The position information of the MCP was determined to be linear over 90% of the 50-mm-wide detector. Spectra spanning regions of over 100 A were accumulated at a resolution of less than 1 A. A wavelength calibration based on a second order equation of spectrometer position was found to result in an accuracy of - 0.1 A. Over 40 transitions of Ne VIII, Ne IX, and Ne X were observed in the wavelength region from 350 to 30 A from n=2-3,4,5; n=3-4,5,6,7,8; n=4-6,7; and n=5-9. An intensity calibration of the detection system allowed the determination of the relative populations of n=3 states of Ne VIII and Ne IX. An overpopulation of states with low orbital angular momenta support electron-capture predictions by the first-order Born approximation. The argon beam-foil data confirmed the wavelength predictions of 30 previously unobserved transitions in the wavlength region from 355 to 25 A from n=2-2; n=3-4; n=4-5,6,7; and n=6-8. Lifetime determinations were made by the simultaneous measurement of 26 argon lines in the spectral region from 295-180 A. Many of the n=2-2 transitions agreed well with theory.

12584 (AD-A—172859/1/XAB) Energy dependence of axial coherent bremsstrahlung at low accelerating voltages. Butler, J.H.; Spence, J.C.; Reese, G.; Humphreys, C.J.; Doole, R.C. (Arizona State Univ., Tempe (USA). Dept. of Physics). 1985. 13p. NTIS, PC A02/MF A01.

A high-voltage electron microscope was used to detect coherent bremsstrahlung (CB) peaks in x-ray spectra from 111 axially oriented silicon. Spectra taken at various incident-beam energies simultaneously exhibit three frequency harmonics corresponding to umklapp by reciprocal lattice vectors (approximately antiparallel to the beam) lying in the third-, fourth-, and fifth-order Laue zones. The spectral energies are quantitatively interpreted in terms of a unified Bloch-wave theory of radiation from fast charged particles in crystals; and the dependence of CB emission energy on accelerating voltage was studied in detail at low energies. Computed intensity calculations for the CB are in reasonable agreement with experiment and show the energy resolution needed to resolve the fine structure on CB lines.

12585 (BNL—38796) Experimental method for determination of the branching ratio of reemitted positrons. Schut, H.; van Veen, A.; Nielsen, B.; Lynn, K.G. (Brookhaven National Lab., Upton, NY (USA); Interuniversitair Reactor Inst., Delft (Netherlands)). 1986. Contract AC02-76CH00016. 18p. (CONF-860798—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002140.

From International workshop on slow positron beam techniques for solid state and surface studies; Norwich, UK (7 Jul 1986).

An experimental method is proposed and tested for the determination of the branching of positrons into positron surface states and positronium states. A study is made of positrons backdiffusing to the surface of incidence in variable energy positron beam experiments. The method is based on positronium fraction measurements using a Ge solid state detector under two experimental conditions (1) removal of the reemitted positrons from the sample surface and detector region and (2) attraction of reemitted positrons towards the sample surface by applying an electric field. It is shown that by this method the effect of a change in the surface condition on the positronium fraction can be separated from effects due to changes of the bulk defect population.

12586 (CONF-8609207—1) Dielectronic recombination of multiply charged ions. Datz, S.; Dittner, P.F.; Fou, C.M.; Miller, P.D.; Pepmiller, P.L. (Oak Ridge National Lab., TN (USA); Delaware Univ., Newark (USA). Dept. of Physics). Sep 1986. Contract AC05-84OR21400. 25p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87001689.

From Conference on the physics of multiple charged ions; Groningen, Netherlands (17 Sep 1986).

Using a merged electron-ion merged beam apparatus in conjunction with the ORNL EN Tandem Van de Graaff, we have measured dielectronic recombination in $\Delta n = 0$ transitions for a number of Li-liked (B^{2+}, C^{3+}, N^{4+}, and O^{5+}), Be-like (C^{2+}, N^{3+}, and O^{4+}), B-like (N^{2+}, O^{3+}, and F^{4+}), and Na-like (P^{4+}, S^{5+}, and Cl^{6+}) ions. The results are compared with theory which includes field enhancement and extension of the more highly charged ions is discussed. 11 refs., 11 figs.

12587 (CONF-8609207—2) Electron impact ionization of Ar^{8+}. Defrance, P.; Rachafi, S.; Jureta, J.; Meyer, F.; Chantrenne, S. (Oak Ridge National Lab., TN (USA); Louvain Univ., Louvain-la-Neuve (Belgium). Inst. de Physique; Belgrade Univ. (Yugoslavia). Inst. za Fiziku). 1986. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87000994.

From Conference on the physics of multiple charged ions; Groningen, Netherlands (17 Sep 1986).

Absolute electron impact ionization cross-sections have been measured for the Neon-like Ar^{8+} in the energy range from below the threshold for the metastable state to 2500 eV. No contribution of metastable states is observed. The results are well reproduced by the Distorted Wave Born Approximation. 12 refs., 1 fig.

12588 (DOE/ER/13243—3) Multilevel relaxation phenomena and population trapping: [Progress report], July 1, 1984-June 30, 1987. Hioe, F.T. (Saint John Fisher Coll., Rochester, NY (USA)). Jan 1987. Contract FG02-84ER13243. 49p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004134.

This research program is directed toward the studies of multiphoton and multilevel coherent effects in laser-induced excitation of atomic and molecular systems. The newly discovered dynamic symmetries will be extended to a systematic classification of all possible SU(N) dynamic symmetries, and will be used to study systems involving continua as well as discrete energy levels, particularly multiphoton absorption above ionization threshold. Analytic solutions for four-state systems will be derived in relation to the study of quantum interference effect. The presence or absence of chaos and phase transitions in multimode lasers will also be explored. 46 refs., 3 figs., 7 tabs.

12589 (IAE—4058/1) Effect of muon-nucleus weak neutral interaction in the 2s → 1s conversion transition of the light μ-minus-mesic atom. Romanov, S.V.; Grechukhin, D.P.; Soldatov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 39p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700339.

For light μ-minus-mesic atoms within the range of μHe-μSc discussed is a possibility of observation of the mixing effect of chemical bond2s>, chemical bond2p> mesic atom states of opposite parity, caused by weak neutral interaction of muon and nucleus and manifesting in anisotropy α of angular distribution of conversion electrons the (Eo+M1) 2s1/2 → 1s1/2 muon transition. Values of W_0 transitions probabilities are calculated for a series of configurations of electron shell of mesic atoms in the relativistic variant of the Hartree-Fock-Slater method values of amplification and anisotropy factors α in the case of conversion at Ns1/2 electron orbits (N=1, 2, 3, 4) are also calculated. It is found out that α value does not practically depend on N quantum number and electron configuration and for all mesic atoms except μHe, α is approximately 10sup(-6) (in μHe α approximately 10sup(-7)). On the contrary the conversion probability W_0 drops quickly with the N growth. So, electron line caused by conversion at K-shell appears to be the most suitable to observe the effect of parity non-conservation. 26 refs.; 8 tabs.

12590 (JINR—R-4-85-250) Perturbation theory for the hydrogen-like atom in a field of a point charge on the group O(4.2) basis. Vinitskij, S.I.; Kadomtsev, M.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700336.

Submitted to the journal J. Phys., A (Lett.).

In the group O/4.2/ an algebraic scheme of perturbation theory is proposed which enables one to find the energy and wave functions of bound states of a hydrogen-like atom in a field of a point chage placed at distance R larger than the size of atom. It is shown that in each order of R^{-1} the correction to the wave function is expressed through a finite number of Coulomb functions of the discrete spectrum with a modified charge. Simple analytical expressions are obtained for the first and second corrections. 17 refs.

12591 (PNL-SA—14084) Recent studies of simultaneous ionization and charge transfer in helium ion-atom collisions. DuBois, R.D. (Pacific Northwest Lab., Richland, WA (USA)). Sep 1986. Contract AC06-76RL01830. 16p. (CONF-861114—34). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003306.

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Ionization processes of atomic and molecular targets induced by light ion impact are reported. Generally these collisions are studied by monitoring the ejected electron spectra with the assumption that each ionizing event leads to a single secondary electron. One mechanism, which has until recently been disregarded as a

means of producing free electrons, is the possibility of capturing an electron from the target and simultaneously ionizing one or more target electrons. For ion impact velocities comparable to, or less than, the outer shell bound electron velocities, we have found that this can be a substantial, if not principal, means of producing free electrons. By measuring the target ionization charge states produced by directly ionizing and charge changing collisions, we have obtained cross sections for direct ionization, pure charge transfer, and charge transfer plus ionization. Several atomic targets have been studied. In addition to the importance of charge transfer plus ionization in producing free electrons, it was found that charge transfer plus ionization can sometimes be more probable that pure charge transfer. 9 refs., 4 figs.

12592 **(PUC-TN—31/84) Lennard-Jones triangular lattice gas in the Kikuchi approximation.** Osorio, R.; Koiller, B. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). Aug 1984. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700337.

The triangular lattice-gas problem for a model with infinitely repulsive nearest-neighbor and attractive second, J_2, and third-neighbor, J_3, interactions is studied in the Kikuchi approximation with a triangle of nearest-neighbor sites as the basic cluster. Values of the ratio αidentical to $J_3/J_2<1$ correspond to a Lennard-Jones interaction in a model for commensurate phases of submonolayers of inert gases adsorbed on graphite. A method of calculation is developed which allows a detailed study of the evolution of the phase diagrams - in particular the location of the liquid-gas critical endpoint and of the solid-liquid-gas triple point. Distinct liquid and gas phases are found to be stable for $\alpha>0.9481$.

12593 **(PUC-TN—39/84) 1sσ molecular orbital ionisation in asymmetric ion-atom collisions by direct Coulomb interaction.** Montenegro, E.C.; Sigaud, G.M. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). Nov 1984. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700340.

The adiabatic perturbation theory is applied to the ionisation of the 1sσ molecular orbital (MO) and extended to less adiabatic collisions by imposing an asymptotic matching with the semi-classical approximation. The transient molecular state wavefunction is modelled using the concept of an 'effective' charge for the colliding system. Through this procedure, the transition amplitudes are evaluated simulating both the relaxation of the passive electrons and the modification of the active electron wave-function, as well as their connection with the motion of the centre of charge during the collision. The direct Coulomb ionisation of the 1sσ MO is calculated for projectiles following hyperbolic paths, in terms of this 'effective' charge, using the current-vector formalism. Comparison is made with a large amount of experimental data showing good agreement.

12594 **(SAND—86-2501C) Quantum-resolved gas-surface scattering: NH_3 from Au (111).** Kay, B.D.; Raymond, T.D.; Coltrin, M.E. (Sandia National Labs., Albuquerque, NM (USA)). Nov 1986. Contract AC04-76DP00789. 5p. (CONF-870220–). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002699.

From Southwest optics conference; Albuquerque, NM, USA (9 Feb 1987).

We have measured angular, velocity, and quantum-state distributions for ammonia molecules scattered from a gold (111) single crystal for a number of surface temperatures and incident beam energies. A molecular beam source produces a well-collimated, rotationally cold (~15 K) beam of NH_3 molecules with a narrow dispersion of translational energy (~10%). The molecular beam impinges on an atomically clean, single crystal of gold (111) and the scattered NH_3 is detected in a quantum-resolved manner using two-photon resonant, three-photon ionization.

12595 **(UCRL—95563) Analysis and interpretation of a high density tandem negative ion source.** Hiskes, J.R.; Lietzke, A.F.; Hauck, C. (Lawrence Livermore National Lab., CA (USA); Lawrence Berkeley Lab., CA (USA)). 22 Oct 1986. Contract W-7405-ENG-48. 16p. (CONF-8610115—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003245.

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

In the last few years the development of tandem-discharge hydrogen-negative-ion-source systems has proceeded along both experimental and theoretical lines. To some extent these developments have proceeded independently, either the available theoretical model was inadequate to account for a specific geometrical configuration, or the experimental data was not sufficient to provide adequate input parameters for calculation. In the tandem system described here the electron temperature, electron density, and other relevant parameters have been obtained for a high-density system whose electron densities range up to 3 - 5 x 10^{12} electrons cm^{-3}. The model calculation for the atomic processes has been extended to include both electron density and electron temperature spatial variations through the second chamber. These spatial variations are essential for an adequate interpretation of tandem systems where steep density gradients may occur beyond the magnetic filter region. In this paper we shall combine the experimental density data with the new spatially dependent atomic model for the purpose of attempting a correlation of the observed and calculated current densities. 9 refs., 8 figs., 3 tabs.

12596 **(UCRL—95564) Electron excitation of $H_2(v'')$ levels to yield vibrationally excited H_2 molecules.** Hiskes, J.R. (Lawrence Livermore National Lab., CA (USA)). 21 Oct 1986. Contract W-7405-ENG-48. 7p. (CONF-8610115—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003246.

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

Electron excitation cross sections to produce vibrationally excited H_2 molecules are calculated for molecules initially in the first and second vibrational levels. The pattern of excitation cross sections as a function of final vibrational level v'' differs from that found in previous calculations initiated from the ground vibrational level. 2 refs., 3 figs.

12597 **(UCRL—95773) High-power pulse propagation experiments.** Alvarez, R.A. (Lawrence Livermore National Lab., CA (USA)). 2 Dec 1986. Contract W-7405-ENG-48. 6p. (CONF-870308—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003441.

From General meeting of the American Physical Society; New York, NY, USA (16 Mar 1987).

One of the questions that must be answered in assessing the potential of pulsed microwave beams as directed energy weapons is, "What is the maximum pulse energy (and/or peak power) that can be delivered from a source to a target." Atmospheric breakdown caused by the electromagnetic fields of the pulse sets one limit on energy propagation, and the breakdown threshold was the subject of fairly extensive investigation a number of years ago. The evolution of microwave source technology has extended the parameter range over which propagation needs to be understood, and additional issues that have not previously been investigated experimentally have assumed a new importance. A new generation of experiments is underway, planned, or proposed to investigate these issues. 13 refs.

12598 **(UCRL—95796) Simulation studies of ion dynamic effects on dense plasma line shapes.** Pollock, E.L. (Lawrence Livermore National Lab., CA (USA)). Dec 1986. Contract W-7405-ENG-48. 14p. (CONF-860864—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003440.

From Meeting on strongly coupled plasma physics; Santa Cruz, CA, USA (4 Aug 1986).

Computer simulations have been widely used in studying dense plasma properties including the local field properties important in spectral line broadening calculations. We will review here a more recent use of simulation, possibly less familiar to this audience, where the time dependent ionic microfield generated by computer simulation of a plasma is used directly as a time dependent external potential for the evolution of the electronic structure of an ion. This permits calculation of the dipole correlation function and

thus line shapes with the inclusion of ion dynamic effects. 12 refs., 7 figs.

12599 **Time-resolved studies of intense, relativistic electron beams with a subnanosecond C-hacekerenkov electro-optic shutter.** Hartemann, F.; Bekefi, G. (Department of Physics and Research Laboratory of Electronics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Applied Physics Letters;* **49**: No. 25, 1680-1682(22 Dec 1986).

Time-resolved studies of intense, relativistic electron beams using a novel subnanosecond C-hacekerenkov electro-optic shutter are described. The technique is applied to the measurements of the electron beam emittance from a multielectrode field emission gun (1.6 MV, 1 kA, 30 ns), and to the study of the stability of a rotating relativistic electron ring (200 kV, 100 A, 1 μs).

12600 **Laser-controlled collective ion accelerator.** O'Shea, P.G.; Destler, W.W.; Rodgers, J.; Segalov, Z. (Electrical Engineering Department and Laboratory for Plasma and Fusion Energy Studies, University of Maryland, College Park, Maryland 20742). *Applied Physics Letters;* **49**: No. 25, 1696-1698(22 Dec 1986).

We report first results from a new collective accelerator experiment in which a laser-controlled channel of ionization is used to control the propagation of the potential well at the front of an intense relativistic electron beam injected at currents above the space-charge limit. The controlled acceleration of protons at the rate of 40 MeV/m over a distance of 45 cm is reported, in good agreement with experimental design values.

12601 **Semiclassical methods in chemical physics.** Miller, W.H. (Lawrence Berkeley Lab., CA). *Science (Washington, D.C.);* **233**: 171-177(11 Jul 1986). Contract AC03-76SF00098.

Semiclassical theory finds use in chemical physics both as a computational method and as a conceptual framework for interpreting quantum features in experiments and in numerical quantum calculations. The semiclassical description of one-dimensional dynamical systems is essentially a solved problem for eigenvalue and scattering situations and for general topologies of potential functions (simple potential wells, multiple wells, multiple barriers, and so forth). Considerable progress has also been made in generalizing semiclassical theory to multidimensional dynamical systems (such as inelastic and reactive scattering of atoms and molecules and vibrational energy levels of polyatomic molecules), and here, too, it provides a useful picture of quantum features (interference in product state distribution, generalized tunneling phenomena, and others) in these more complex systems.

12602 **Computational and experimental short pulse, high power microwave air breakdown in a rectangular waveguide.** Mayhall, D.J.; Yee, J.H.; Alvarez, R.A.; Byrne, D.A. (Lawrence Livermore National Lab., Univ. of California, P.O. Box 808, Livermore, CA 94550). pp 70 of Conference record of the 1986 IEEE international conference on plasma science. Piscataway, NJ; IEEE Service Center (1986). (CONF-860523—). Contract W-7405-ENG-48.

From 13. IEEE international conference on plasma science; Saskatoon, Saskatchewan, Canada (19 May 1986).

Experimental measurements of incident and transmitted power for short-pulse (3-10 nsec), high power (to 7 MW) microwave air breakdown with the TE10 mode at 2.856 GHz in WR-284 waveguide are performed for filling pressures from 3.5 to 500 Torr. Initially, natural preionization of the air was used. More recently preionization with a gamma ray source has been employed to enhance the reproducibility of the breakdown. One-dimensional, plane wave, finite difference computer code calculations with Maxwell's equations and the electron fluid equations for conservation of number density, transverse momentum, and energy are compared with experimental transmitted power. The electron fluid equations include collision frequencies for avalanche ionization and momentum and energy loss due to electron-neutral collisions. The agreement during the rise of the pulse is good, but that for the fall is poor. The calculated pulse drops rapidly, but the measured pulse falls much more slowly. Possible reasons for the disagreement are the transverse variation of the mode electric field across the waveguide and axial dispersion of the pulse as it travels down the waveguide. These are both two-dimensional effects. Two-dimensional, TE10 mode, finite difference computer code calculations show much better agreement with measurement for the fall of the transmitted power with time.

12603 **Photon energy dependent branching ratios of the inner valance satellites in the photoemission of solid ethylene.** Murgai, V.; Hulbert, S.L.; Johnson, P.D.; Strongin, M.; Eberhardt, W. (Brookhaven National Lab., Upton, NY). *Chemical Physics Letters;* **111**: No. 1-2, 157-160(26 Oct 1984). Contract AC02-76CH00016.

Measuring the photoelectron branching ratios of the outer and inner valence emission of ethylene as a function of photon energy between 40 and 200 eV, the authors are able to identify the various photoemission lines. As theory predicts, the single particle picture breaks down for the innermost valence orbital (2a/sub g/). The photoemission from this orbital is spread over two lines which are also degenerate with other excited state configurations of the ion. This leads to interference effects which are indeed observed in the cross section of these lines. 10 references, 2 figures.

12604 **Antiprotonic atomic energy levels via the (p vector, p) reaction.** Gibbs, W.R.; Kaufmann, W.B. (Los Alamos National Lab., NM). *Physics Letters [Section] B;* **145B**: No. 1,2, 1-3(13 Sep 1984).

Detection of hitherto unobservable low-lying levels of antiprotonic atoms, populated by (p vector, p) reactions, may be experimentally feasible and would shed light upon the threshold p vector-nuclear interaction. 5 references, 2 figures, 3 tables.

12605 **Photoelectron branching ratios and asymmetry parameters of the two outermost molecular orbitals of methyl cyanide.** Holland, D.M.P.; Parr, A.C.; Dehmer, J.L. (Univ. of Maryland, College Park). *Journal of Electron Spectroscopy and Related Phenomena;* **34**: 87-96(1984).

Vibrationally resolved photoelectron branching ratios and asymmetry parameters have been determined for the two outermost molecular orbitals of methyl cyanide. The results are discussed briefly within the context of similar studies on cyanogen and hydrogen cyanide, and in relation to structures exhibited in the photoionization efficiency curve. 30 references, 8 figures.

12606 **Inversion symmetry of hydrogenic expectation values.** More, R.M. (Lawrence Livermore National Lab., CA). *Journal of Physics B: Atomic and Molecular Physics;* **16**: 3859-3861(1983). Contract W-7405-ENG-48.

The authors have observed a surprising inversion property of the semiclassical expectation values for hydrogenic atoms, which shows that averages [r/sup j/] are proportional to averages [r/sup -(j+3)/] for any integer j. Non-relativistic quantum expectation values obey a modified form of the same symmetry. 13 references.

12607 **Charge distributions of barium isotopes from muonic x-rays.** Shera, E.B; Wohlfahrt, H.D.; Hoehn, M.V.; Tanaka, Y. (Los Alamos National Lab., NM). *Physics Letters [Section] B;* **112B**: No. 2, 124-128(6 May 1982).

The results of a muonic x-ray study of the charge radii of stable barium isotopes are presented and compared with optical isotope shifts. The isotope shifts $\Delta\langle r^2\rangle$ of a wide range of barium isotopes are found to be in good agreement with the droplet model and with IBA calculations. 15 references, 1 figure, 2 tables.

12608 **(AD-A—172786/6/XAB) Method for determining the high-energy photon spectrum of a pulsed plasma source. Master's thesis.** Beason, C.W. (Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA). School of Engineering). Mar 1984. 128p. (AFIT/GNE/PH—84M-1). NTIS, PC A07/MF A01.

This investigation examined the feasibility of using an array of plastic scintillator photomultiplier tube radiation detectors to determine the high energy (h μ greater than 30 keV) photon spectrum of SHIVA STAR. A method of determining the spectrum is outlined in which the detectors are filtered with different materials, and the spectrum is deconvoluted by an iterative technique on a computer. Data from SHIVA STAR was not available, so measurements of the radiation output of a plasma gun were analyzed.

12609 **(DOE/ER/13044—6) [Systems near the onset and in the well-developed regimes of turbulence]: Research completed and in progress.** Siggia, E. (Cornell Univ., Ithaca, NY (USA). Dept. of Physics). 17 Dec 1986. Contract AC02-83ER13044. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003708.

Brief summaries of research by E. Siggia, M.J. Feigenbaum, and L. Chayes are presented. The research of E. Siggia concerns the study of singular solutions to the Biot-Savart model for a vortex filament, integrability for discrete Hamiltonian systems, and small divisor problems. M.J. Feigenbaum is studying the behavior of objects with highly complicated scaling properties. L. Chayes has focused on the mathematics and physics of disordered systems. Lists of publications for each researcher are included.

12610 **(LA—10853-MS) A generalized MAC [Marker-and-Cell] method for incompressible fluid flow.** Kashiwa, B.A. (Los Alamos National Lab., NM (USA)). Nov 1986. Contract W-7405-ENG-36. 24p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003661.

A scheme for obtaining numerical solutions to the time-dependent incompressible fluid flow equations is presented. The method is designed for use on a computational grid of arbitrary polygons, and can be considered to be the Finite-Volume (FV) generalization of the Marker-and-Cell (MAC) method. A scheme resembling the advection method of van Leer is utilized in a way that yields second-order spatial accuracy and conditional stability with any level of fluid viscosity. The method is fully described in the presentation. Sample results are given for a variety of two-dimensional flow circumstances. These include non-viscous, viscous, steady, and unsteady flows on various non-orthogonal computational meshes. 10 refs., 7 figs.

12611 **(LA-UR—86-3785) Convectively driven superfluid turbulence in dilute solutions of ^{3}He in superfluid ^{4}He.** Ecke, R.E.; Haucke, H.; Wheatley, J. (Los Alamos National Lab., NM (USA)). Oct 1986. Contract W-7405-ENG-36. 25p. (CONF-8610184—1). NTIS, PC AA02/MF A01; 1; GPO Dep. File Number DE87002918.

From Conference on quantum fluids and solids; Banff, Canada (13 Oct 1986).

A dilute solution of ^{3}He in superfluid ^{4}He usually behaves as a single component classical fluid in the context of hydrodynamic convection. However, certain convective states can be excited which do not seem to exist in classical convection. These states are characterized by noisy temperature fluctuations and a pronounced decrease in thermal conductance relative to the classical convecting states. Critical convective flow fields are observed analogous to critical velocities for superfluid turbulence in pipes. The magnitude of the average critical velocities for these two types of superfluid turbulence are in good agreement. Also, a quantitative estimate of energy dissipation due to the interaction of normal fluid and quantized vortex lines appears to account for the large decrease in thermal heat transport for the turbulent states. These states are identified as states of convectively driven superfluid turbulence. 23 refs., 5 figs.

12612 **(PUC-TN—37/84) Two-dimensional superfluid transition in Hdown.** Mello, E.V.L.; Carneiro, G.M. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). Nov 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700338.

The surface density as function of temperature for Hdown adsorbed on superfluid helium film is studied for several gas densities. The theory used is exact in the low density limit and predict Kosterlitz-thouless transition temperatures lower than previous calculation and also lower saturation density. The results confirm the possibility of a 2D superfluid transition under conditions close to those achieved experimentally.

12613 **(UCRL—95582) Turbulent energy generated by accelerations and shocks.** Mikaelian, K.O. (Lawrence Livermore National Lab., CA (USA)). 8 Oct 1986. Contract W-7405-ENG-48. 12p. (CONF-870235—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002377.

From 3. international conference on stratified flows; Pasadena, CA, USA (3 Feb 1987).

The turbulent energy generated at the interface between two fluids undergoing a constant acceleration or a shock is calculated. Assuming linear density profiles in the mixed region we find E/sub turbulent//E/sub directed/ = $2.3A^2$% (constant acceleration) and $9.3A^2$% (shock), where A is the Atwood number. Diffusion models predict somewhat less turbulent energy and a density profile with a tail extending into the lower density fluid. Eddy sizes are approximately 27% (constant acceleration) and 17% (shock) of the mixing depth into the heavier fluid. 6 refs., 3 figs.

12614 **Influence of damping in an electron gas on wake binding energies.** Ashley, J.C.; Echenique, P.M. (Oak Ridge National Lab., TN). *Physical Review [Section] B: Solid State;* **31**: No. 7, 4655-4656(1 Apr 1985). Contract AC05-84OR21400.

The binding energies of electrons trapped in the oscillatory wake of electron-density fluctuations trailing a fast ion in a solid are shown to decrease with increasing damping in an electron gas.

12615 **Nonlinear stability of asymptotic suction.** Miklavcic, M. (Univ. of Minnesota, Minneapolis). *Transactions of the American Mathematical Society;* **281**: No. 1, 215-231(1 Jan 1984). Contract AS05-80ER10711.

The semigroup approach to the Navier-Stokes equation in halfspace is used to prove that the stability of the asymptotic suction velocity profile is determined by the eigenvalues of the classical Orr-Sommerfeld equation. The usual obstacle, namely, that the corresponding linear operator contains 0 in the spectrum is removed with the use of weighted spaces. 13 references.

12616 **Overview of Rayleigh-Taylor instability.** Sharp, D.H. (Los Alamos National Lab., NM). *Physica D: Nonlinear Phenomena (Amsterdam);* **12D**: 3-18(1984).

The aim of this talk is to survey Rayleigh-Taylor instability, describing the phenomenology that occurs at a Taylor unstable interface, and reviewing attempts to understand those phenomena quantitatively. 65 references, 12 figures, 1 table.

6451 Particle Interactions And Properties - Experimental

REFER ALSO TO CITATION(S) 12699

12617 **(ANL-HEP-CP—86-113) D* width and the study of F and F*.** Sugano, K. (Argonne National Lab., IL (USA)). Jul 1986. Contract W-31109-ENG-38. 10p. (CONF-860701—32). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87001550.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Recent results on the D*, F, and F* production in e+e- from HRS and MARK III are summarized. An improved upper limit on the decay width of D* is reported. A brief review of the characteristics of F and the updated data of the F production in e^+e^- are given. A new measurement on F* is made using the associated production method in the reaction $e^+e^- \rightarrow FF^*$.

12618 **(BNL—38910) Magnetic monopole catalysis of proton decay.** Marciano, W.J.; Salvino, D. (Brookhaven National Lab., Upton, NY (USA)). Sep 1986. Contract AC02-76CH00016. 4p. (CONF-8606215—22). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003231.

From Summer study on the physics of the superconducting super collider; Snowmass, CO, USA (23 Jun 1986).

Catalysis of proton decay by GUT magnetic monopoles (the Rubakov-Callan effect) is discussed. Combining a short-distance cross section calculation by Bernreuther and Craigie with the long-distance velocity dependent distortion factors of Arafune and Fukugita, catalysis rate predictions which can be compared with experiment are obtained. At present, hydrogen rich detectors such as water (H_2O) and methane (CH_4) appear to be particularly well suited for observing catalysis by very slow monopoles. 17 refs., 1 fig.

12619 (BNL—39020) Comparison of quasielastic scattering nu/sub μ/N → μ^- P and Δ^{++} production reaction nu/sub μ/p → $\mu^-\Delta^{++}$ in the BNL 7-foot deuterium bubble chamber. Kitagaki, T.; Yuta, H.; Tanaka, S.; Yamaguchi, A.; Abe, K.; Hasegawa, K.; Tamai, K.; Kunori, S.; Otani, Y.; Hayano, H. (Brookhaven National Lab., Upton, NY (USA); Tohoku Univ., Sendai (Japan); Tohoku Gakuin Univ. (Japan)). 1986. Contract AC02-76CH00016. 16p. (CONF-8606201—6). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003489.

From Neutrino '86; Sendai, Japan (3 Jun 1986).

The neutrino quasielastic and delta-1232 production in nu/sub μ/d → μ^-pp and nu/sub μ/d → $\mu^-\Delta^{++}$n interactions have been studied using high statistics data obtained from a bubble chamber experiment at Brookhaven. Results on a detailed study of the axial form factor in these reactions are presented. In particular, assuming the dipole axial form factor, the behavior of the axial-vector mass is examined from the Q^2 distributions for these reactions. The reaction mechanisms are compared, and the similarity between these reactions are shown. (LEW)

12620 (CERN-EP—86-136) Future physics at LEAR [Low-Energy Antiproton Ring]. Landua, R. (European Organization for Nuclear Research, Geneva (Switzerland)). 24 Sep 1986. 29p. (CONF-8604201—7). NTIS (US Sales Only), PC A03/MF A01. File Number DE87900144.

From Antimatter physics at low energies; Batavia, IL, USA (10 Apr 1986).

The main physics motivation of the experiments at LEAR in the post-ACOL phase is described: Test of fundamental symmetries, (CP, T, CPT) and of QCD at low energies. Short technical descriptions of the experiments are given, with special emphasis on ambitious new techniques.

12621 (DOE/ER/02504—452) High energy accelerator and colliding beam user group: Progress report, March 1, 1986-February 28, 1987. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). Sep 1986. Contract AC05-76ER02504. 93p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87003322.

Work done for the OPAL collaboration at the LEP storage ring being constructed at CERN is reported. The main responsibility discussed is the construction, installation, and maintenance of the hadron calorimeter. Also reported are advances in the design of the OPAL software concerning data handling for the hadron barrel calorimeter. Also reported are experiments at DESY, including a study of electron-positron collisions at PETRA. Experiments at Fermilab are also discussed, including one on deep inelastic muon scattering at the Tevatron II and contributions to the development of the DO detector at Tevatron I. Yet another experiment, this one at Los Alamos, is in its final year of data taking and involves the observation and initial measurement of neutrino-electron elastic scattering. Computer experience in high energy physics is reported. Other activities reported include a neutrino deuterium bubble chamber experiment, and work on a polarized electron storage ring design for HERA. 164 refs., 17 figs. (LEW)

12622 (DOE/ER/03244—132) Search for a strangeness -2 dibaryon using a ^{3}He target: Report of the E-813 collaboration on plans for ^{3}He target version of the H dibaryon search. Franklin, G.B.; Barnes, P.D. (Carnegie-Mellon Univ., Pittsburgh, PA (USA)). 26 Sep 1986. Contract AC02-76ER03244. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003381.

An experimental configuration is described that would search for the H dibaryon in the reaction $K^- + {}^3He \rightarrow K^+ + H + n$. In particular, the design of the K^+ spectrometer is discussed as well as event rate estimates and the technical details of the efficient background rejection required to make the experiment feasible. 7 refs., 11 figs. (LEW)

12623 (DOE/ER/03244—133) The anti pp yields anti λ λ reaction near threshold. Maher, C.J. (Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics). Jun 1986. Contract AC02-76ER03244. 153p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87003382.

Measurements of differential and integrated cross sections as well as final state polarizations for the anti p p → anti Λ Λ reaction are presented. The reaction was studied at two incident antiproton momenta (1476.5 MeV/c and 1507.5 MeV/c) corresponding to total center of mass energies of 15.5 MeV and 26.4 MeV above the reaction threshold. The trajectories of charged decay products of the anti Λ and Λ were observed in a multiwire proportional chamber and in two sets of drift chambers. The data were analyzed with a computer program which reconstructed anti p p → anti Λ Λ → anti p π^+ pπ^- events and performed kinematic fitting. The results are compared to several recent meson exchange calculations, and a one-gluon exchange calculation. The experiment was performed at the Low Energy Antiproton Ring (LEAR) at CERN. The data presented represent the first results of the PS185 collaboration's study of the threshold production of hyperon-antihyperon states.

12624 (DOE/ER/03244—135) The weak decay of hypernuclei. Franklin, G.B. (Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics). [1986]. Contract AC02-76ER03244. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003928.

Hypernuclei whose ground states are stable against strong decay are used to study two-baryon weak interactions. A review of th existing experimental data, including recent results from the AGS on /sub $\Lambda/^{12}$C and /sub $\Lambda/^{11}$B, shows that the lifetimes and branching ratios can be used to test the effective weak Hamiltonians used in the rate calculations. 10 refs., 4 figs.

12625 (DOE/ER/03956—5) Elementary particle interactions: Progress report, October 1, 1985-September 30, 1986. Bugg, W.M.; Brau, J.E.; Condo, G.T.; Handler, T.; Hart, E.L. (Tennessee Univ., Knoxville (USA). Dept. of Physics). Oct 1986. Contract AS05-76ER03956. 98p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87003317.

It has been found that in photoproduction, where Deck effects are minimal, the A_1 mass and width is similar to that of the A_3, in direct contradiction to electron-positron collider results indicating a considerably lower A_1 mass. The reaction $\gamma p \rightarrow p(\omega\pi^0)$ at 20 GeV with a decay angular distribution study of the $(\omega\pi^0)$ state has been analyzed to demonstrate its consistency with the B(1235) J/sup P/ = 1^+. Practical high resolution holographic photography of a large bubble chamber volume was demonstrated to be achievable with efficiencies greater than 25%, giving strong support to the technical feasibility of the tau neutrino experiment. It has been decided to construct the SLD luminosity monitor using silicon diode technology, and to construct a lead liquid argon calorimeter (instead of uranium). (LEW)

12626 (DOE/ER/04449—T1) Study of the neutron-proton interaction in the 300 to 700 MeV energy region. Annual progress report (1985-1986). Northcliffe, L.C. (Texas A and M Univ., College Station (USA). Research Foundation). 1986. Contract AS05-76ER04449. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87001873.

Results obtained for experiments conducted at the LAMPF are reported. All of these experiments utilize the LAMPF polarized (50%) neutron beam and hydrogen targets. Measurements are reported for spin-correlation parameters (500 to 800 MeV, 13 GeV/c, 18.5 GeV/c) and the analyzing power (800 MeV) for n-p elastic scattering. The status of earlier LAMPF experiments by this group are also included.

12627 (DOE/ER/10667—10) Experimental particle physics at the University of Pittsburgh: Progress report, April 1, 1985-March 31, 1986. Cleland, W.E.; Coon, D.D.; Engels, E. Jr.; Shepard, P.F.; Thompson, J.A. (Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy). Dec 1986. Contract AC02-80ER10667. 109p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87003878.

Progress is reported on the study of lepton production at the SPS, large p/sub T/ direct photon production at the ISR, direct photon production at the Tevatron, and the search for fractional charge particles in semiconductors. (LEW)

12628 (DOE/ER/40039—16) High Energy Physics Program: Annual report. Webb, R.C.; McIntrye, P.M.; DiBitonto, D.D. (Texas A and M Univ., College Station (USA). Dept. of Physics). Nov 1986. Contract AS05-81ER40039. 105p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87003314.

The prime focus has been work on the Collider Detector at Fermilab (CDF), where we have successfully completed the construction and installation of half of the forward/backward hadron calorimeter system in time for the coming data taking runs of CDF this winter. The second research objective has been participation in the MACRO collaboration's efforts to search for the elusive GUT magnetic monopole at the newly constructed underground laboratory at Gran Sasso in Italy. This effort is a natural continuation of the earlier work which was carried out in our own laboratory in Hockley, Texas, and involves building a large cosmic ray detector over the next several years at the Gran Sasso in Italy.

12629 (DOE/ER/40193—T2) Investigation of hadronic matter at the Fermilab Tevatron Collider: Technical progress report, [1985 November-1986 October]. Anderson E.W. (Iowa State Univ. of Science and Technology, Ames (USA)). 2 Dec 1986. Contract AC02-85ER40193. 19p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003693.

An investigation of hadronic matter at very high energy densities is reported: experiment E-735. The present focus is a search for a quark-gluon plasma phase of matter expected to occur when temperatures of 240 MeV are achieved. Instrumentation for three unique signatures are being prepared for implementation with first operation of the Fermilab Tevatron Collider in December 1986. The projects include a 240-element trigger hodoscope array, and a segmented photon detector. The hodoscope has been constructed and is currently undergoing calibration tests. The data acquisition system to be used for E-735 has undergone several modifications in response to changing equipment schedules, and is now largely complete. The required service will be available for the data acquisition, and additional packages will be implemented throughout the experimental period. A supplemental proposal is presented to extend the overall range and strength of the group by the addition of theoretical and data analysis expertise.

12630 (DOE/ER/40194—2) [High energy physics]: Progress report. Kofler, R.R. (Massachusetts Univ., Amherst (USA). Dept. of Physics). Dec 1986. Contract AC02-85ER40194. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003778.

During calendar year 1986 the high energy physics group at the University of Massachusetts continued its study of electron-positron annihilation reactions along with the TPC collaboration at the PEP facility of the Stanford Linear Accelerator Center (SLAC). During this year the TPC detector completed its 4th year of data collection including the 2nd year of data gathering with its full momentum resolution capabilities. In addition to assisting in the data collection, the UMass group has participated in hardware monitoring and improvement efforts, and has contributed to a number of diverse data analysis projects. The TPC collaboration has continued to publish numerous analysis results and new publications from the current data sample will continue for at least several years. Continued data taking has been approved at the PEP facility with two major improvements: the PEP luminosity will be increased by a factor of 4 or more, and the TPC will be further enhanced with the addition of a vertex detector. In addition to its continuing work with the TPC collaboration the UMass group has expanded its efforts to include a participation in the SLD project at the new linear collider (SLC) facility at SLAC. This expansion of effort has been facilitated by the addition of another UMass faculty member, Stanley Hertzbach, whose full year sabbatical, beginning this fall, will be spent working full time on the SLC project at SLAC. The UMass group has joined the "beamline" subgroup of the SLD project and is working on the design of the masking which is necessary near the interaction point to shield the detector from the intense halo of synchrotron radiation that accompanies the electron and positron beams.

12631 (INIS-SU—353, pp 31-35) Determination of π^+-meson polarizability. Ajbergenov, T.A.; Baranov, P.S.; Beznisko, O.D. 1984. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780034.

In Experimental and theoretical physics. Collection.

Measurement of differential cross section of $\gamma\,\pi^+$- scattering for $s_1 > 4\,\mu^2$ (s_1 - is the square of $\gamma\,\pi$-system total energy in c.m.s., μ - pion mass) and of scattering angle THETAsub($\gamma\,\pi$) > 100 deg as well as determination of pion polarizability is the aim of this paper. Experiment was carried out at FIAN 1.2 GeV electron synchrotron "Pakhra". Specific feature of this experiment is that recoil neutron and producted pion were detected fromone sideof primary photon beam. As a result of experimental data approximation the following value for pion compton-effect differential cross section is obtained: d σsup(ex)/dΩsub($\gamma\,\gamma$)sup(Q)=(5.4 +- 1.0) x 10^{-32} cm^2/sr at s_1=(6.5 +- 0.5) μ^2, THETAsub($\gamma\,\pi$)130 deg +- 30 deg. Born cross section corresponding to these parameters is d σsup(B)/dΩsub($\gamma\,\gamma$)sup(Q)7.9 x 10^{-32} cm^2/sr. π^+-meson electric polarizability value asub(πsup(+))=(20 +- 12) x 10sup(-43) cm^3 is obtained. Values of pion polarizability obtained by different methods are in agreement with each other within the measurement accuracy and agree with the latest theoretical values ofpion polarizability. 9 refs.; 2 figs.

12632 (ITEF—56-1984) Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A → pX reactions at a π-meson momentum of 1.5 GeV/c. Buklej, A.E.; Burgov, N.A.; Vlasov, M.K. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700376.

Energy spectra of protons escaping at angle of 132 deg +- 6 deg in inclusive π^- (^{6}Li, C, Cu, Pb) → pX, π^+ A(^{6}Li, C, Pb) → pX reactions at the incident pions momentum of 1.5 GeV/s. For the first time obtained is the indication to approximately 4% difference in value of spectra inclination of protons escaping under the action of π^-- and π^+-mesons. 4 refs.; 4 figs.

12633 (ITEP—114-1985) Searches for heavy neutrino in beta-decay. Apalikov, A.; Boris, S.; Golutvin, A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700375.

The measurement of ^{35}S β-spectrum and upper limits for mixing probabilities in the neutrino mass range 5-80 keV/c were presented. 10 refs.; 3 figs.

12634 (ITP—85-53-E) Relativistic-invariant statistical theory and its application to multiple processes. Sinyukov, Yu.M. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700372.

The relativistic-invariant generalization of the ideal gases statistical theory is suggested. The covariant partition function method is developed. The statistical and thermodynamical properties of gases are found on any hypersurface in arbitrary inertial reference frame. The consequences of the developed theory for statistical models of hadron multiple production are discussed. 12 refs.; 1 fig.

12635 (JINR—E-1-85-415) Universality of hadron jets in soft and hard particle interactions at high energies. Baldin, A.M.; Didenko, L.A.; Grishin, V.G.; Kuznetsov, A.A.; Metreveli, Z.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy; Tbilisskij Gosudarstvennyj Univ. (USSR)). 1985. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700377.

Submitted to the journal Z. Phys., A.

The hadron jet production in soft π^-p- and cumulative π^-pC-interactions at a 40 GeV/c momentum is studied. The collective characteristics of jets and the functions of the quark and diquark fragmentation into charged pions and neutral strange particles are analysed. The results obtained are compared with analogous data for e^+e^-- and ν(anti ν)p- interactions. The hadron jet properties are also studied using relativistic invariant variables - the squared relative 4-velocities b sub(ik).-(Psub(i)/msub(i)-Psub(k)sup(2)/msub(k) (where Psub(i), Psub(k) are 4-momenta of i-th and K-th particles and msub(i), msub(k) are their masses). The results obtained show that the quark (diquark) fragmentation proceed in a similar manner in soft hadron-hadron collisions, cumulative interactions on light nuclei, in e^+e^--annihilation and deep inelastic ν(anti ν)p-scattering. 43 refs.; 24 figs.; 5 tabs.

12636 (LA-UR—86-3946) Calculation of electromagnetic observables in few-body systems. Gibson, B.F. (Los Alamos National Lab., NM (USA); Melbourne Univ., Parkville (Australia). School of Physics). Oct 1986. Contract W-7405-ENG-36. 47p. (CONF-8610185—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87002901.

From Autumn school on few-body methods; Lisbon, Portugal (13 Oct 1986).

An introduction to the calculation of electromagnetic observables in few-body systems is given by studying two examples in the trinucleon system: (1) the elastic electron scattering charge form factor in configuration space and momentum space and (2) the two-body photodisintegration of ^{3}H leading to a neutron-deuteron final state in a separable potential formalism. In the discussion of charge form factor calculations, a number of related topics are touched upon: the relation of structure in Psi to the properties of simple NN forces, the Faddeev and Schroedinger solution to the harmonic oscillator problem, the Rosenbluth formula for electron scattering from a spin-1/2 nuclear target (e.g., the proton or ^{3}H), and the charge density operator. Formulae for ^{3}He and ^{3}H charge form factors in a central force approximation are given in configuration and momentum space. The physics of these form factors is discussed in light of results from realistic nucleon-nucleon potential model calculations, including the effects of two-pion-exchange three-body force models. Topics covered are the rms charge densities, and the Coulomb energy of ^{3}He. In the discussion of the ^{3}H photodisintegration, the Siegert form of the electric dipole operator (in the long wave length limit) is derived as are the separable potential equations which describe the off-shell transition amplitudes which connect nucleon-plus-corrected-pair states. Expressions for the Born amplitudes required to complete the two-body photodisintegration amplitude calculation are given. Numerical results for a model central force problem are discussed and compared with an approximate calculation. Comparisons with ^{3}H(γ,n)d and ^{3}He(γ,p)d data are made, and the significant features of the exact theoretical calculation are outlined. 61 refs., 26 figs.

12637 (LBL—90-Rev.) A guide to data in elementary particle physics. Yost, G.P.; Rittenberg, A.; Armstrong, B.; Ferguson, M. Jr.; Levine, B.S.; Simpson, K.H.; Trippe, T.G.; Visser, M.J.; Wagman, G.S.; Wohl, C.G. (Lawrence Berkeley Lab., CA (USA); Stanford Linear Accelerator Center, Menlo Park, CA (USA); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). Sep 1986. Contract AC03-76SF00098. 589p. NTIS, PC A25. File Number DE87003621.

We present an indexed guide to experimental high energy physics literature for the years 1977 through 1985. While no actual data are included, approximately 9000 papers are indexed by Beam/Target/Momentum, Reaction/Momentum (including the final state), Particle, and Accelerator/Detector. All indices are cross-referenced via an ID to the paper's title and references in the ID/Reference/Title Index. Black marks (bleeder tabs) at the side of the page enable each section to be located quickly, using the Table of Contents on the back cover. The information presented in this guide is also publicly available on a regularly updated SLAC-SPIRES database called DATAGUIDE.

12638 (PB—87-116141/XAB) Bibliography of photon total cross section (attenuation coefficient) measurements 10 eV to 13.5 Gev. Hubbell, J.H.; Gerstenberg, H.M.; Saloman, E.B. (National Bureau of Standards, Washington, DC (USA). Office of Standard Reference Data). Oct 1986. 104p. (NBSIR—86/3461). NTIS, PC A06/MF A01.

The authors present a bibliography of papers reporting absolute measurements of photon (XUV, x-ray, gamma-ray, bremsstrahlung) total interaction cross sections or attenuation coefficients for the elements and some compounds. The energy range covered is from 10 eV to above 10 GeV. The papers are part of the reference collection of the National Bureau of Standards Photon and Charged Particle Data Center. They cover the period from 1907 to March 1986. Included with each reference are annotations specifying the substances studied and the duplicative references to a total of about 20,000 data points. All these data are available in machine-readable form.

12639 (SLAC-PUB—4054) A study of strange and strangeonium states produced in LASS [Large Aperture Superconducting Solenoid]. Aston, D.; Awaji, N.; Bienz, T.; Bird, F.; D'Amore, J.; Dunwoodie, W.; Endorf, R.; Fujii, K.; Hayashii, H.; Iwata, S. (Stanford Linear Accelerator Center, Menlo Park, CA (USA); Nagoya Univ. (Japan). Dept. of Physics; Cincinnati Univ., OH (USA); Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). 1986. Contract AC03-76SF00515. 8p. (CONF-860701—65). NTIS, PC A02/MF A01. File Number DE87003669.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Results are presented from the analysis of several final states from a high-sensitivity (4 ev/nb) study of inelastic K^-p interactions at 11 GeV/c carried out in the LASS Spectrometer at SLAC. New information is reported on leading and underlying K^* states, and the strangeonium states produced by hypercharge exchange exchange are compared and contrasted with those observed in radiative decays of the J/psi. 8 refs., 15 figs.

12640 New limit on axion production in 800-GeV hadronic showers. Brown, C.N.; Cooper, W.E.; Finley, D.A.; Jonckheere, A.M.; Jostlein, H.; Kaplan, D.M.; Lederman, L.M.; Smith, S.R.; Luk, K.B.; Gray, R. (Fermi National Accelerator Laboratory, Batavia, Illinois 60510). *Physical Review Letters;* **57**: No. 17, 2101-2104(27 Oct 1986).

A search for neutral penetrating paticles has been made by use of an 800-GeV proton beam incident on the magnetized beam dump of the E605 spectrometer. Limits on the mass and couplings of such particles are presented. A 1.8-MeV axion coupled only to e^+e^- is ruled out.

12641 Study of e^+e^- pairs in the mass range 11 to 25 GeV/c^2 at the CERN intersecting Storage Rings. Angelis, A.L.S.; Basini, G.; Besch, H.J.; Breedon, R.E.; Camilleri, L.; Chapin, T.J.; Cool, R.L.; Cox, P.T.; von Gagern, C.; Grosso-Pilcher, C.; Hanna, D.S. (CERN, Geneva, Switzerland). *Physics Letters* [*Section*] *B;* **147B**: No. 6, 472-476(15 Nov 1984). Contract AC02-81ER40033.

A sample of 58 e^+e^- events with an invariant mass greater than 11 GeV/c^2 produced in pp collisions at a center-of-mass energy of 62.3 GeV is discussed. The cross sections are presented as a function of the mass and transverse momentum. The electron pairs are produced with a mean transverse momentum of 2.50 +/- 0.25 GeV/c. 16 references, 5 figures.

12642 Charm quark production and fragmentation in e^+e^- annihilation at 29 GeV. Derrick, M.; Fernandez, E.; Fries, R.; Hyman, L.; Kooijman, P.; Loos, J.S.; Musgrave, B.; Price, L.E.; Schlereth, J.; Sugano, K.; Weiss, J.M. (Argonne National Lab., IL). *Physics Letters* [*Section*] *B;* **146B**: No. 3-4, 261-265(11 Oct 1984).

The electroweak production asymmetry and the decay fragmentation function for $e^+e^- \rightarrow$ c anti c have been measured at $\rightarrow$ s = 29 GeV using charged D* production over the full kinematic range. The data were taken at PEP using the High Resolution Spectrometer. The measured asymmetry is -0.12 +/- 0.08. The total production cross section in units of the point cross section corrected for initial state radiation is R/sub D*/ = 2.7 +/- 0.9. 14 references, 4 figures, 1 table.

From International conference and symposia on unified concepts of many-body problems; Stony Brook, NY, USA (4 Sep 1986).

The problem of nucleon-antinucleon (N anti N) annihilation is discussed in terms of the underlying quark-gluon dynamics of QCD. It is shown how recently observed selection rules exert a strong constraint on the effective quark-antiquark (Q anti Q) creation/destruction operator which enters in the annihilation process. The data on two meson modes suggest that a Q anti Q operator with one gluon quantum numbers is inadequate, and that a strong coupling approach to the treatment of the gluonic degrees of freedom is more appropriate. 25 refs., 1 fig.

12644 **(DOE/ER/04928—14) Partial wave analyses of hadron scattering below 2 GeV: Progress report, May 1, 1986-December 31, 1986.** Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA)). Jan 1987. Contract AS05-76ER04928. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003569.

The principle focus of study for the Center for Analysis of Particle Scattering (CAPS) in the Department of Physics at VPI & SU continues to be analyses of basic two-body reactions below 2 GeV. In addition to the nucleon-nucleon, pion-nucleon, and K^+-nucleon elastic systems, we have performed an extensive isobar analysis of the pion production reaction in pion-nucleon scattering. A pion photoproduction analysis is planned to start in 1987-1988. Over the last few years we have developed an extensive computer system for the rapid assimilation of new experimental measurements into the elastic scattering data bases and analyses to obtain the most recent and best two body amplitudes available. This information is distributed to the physics community through a package of interactive computer programs and data bases known as SAID.

12645 **(DOE/ER/25009—361) Baryons on the lattice: 2, Static potential.** Flower, J. (California Inst. of Tech., Pasadena (USA)). Jun 1986. Contract AC03-81ER40050;FG03-85ER25009. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003558.

The potential due to three heavy color sources is studied in Monte Carlo Lattice Gauge Theory. The string tension is consistent with that obtained in corresponding quark-antiquark calculations and also with relativised harmonic oscillator calculations. Coulombic effects are consistent with the contribution from string vibrations being small in the range x $\leqq$ .5 fm. 21 refs., 4 figs., 4 tabs.

12646 **(DOE/ER/25009—362) Baryons on the lattice: 3, Energy density.** Flower, J. (California Inst. of Tech., Pasadena (USA)). Jun 1986. Contract FG03-85ER25009. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003557.

The squared energy density in the chromoelectric and chromomagnetic fields surrounding three heavy color changes is investigated in Monte Carlo Lattice Gauge Theory. The results are consistent with the dual superconductor picture of confinement, with the confining strings lying in the 'Y' configuration. 22 refs., 4 figs., 4 tabs.

12647 **(DOE/ER/40118—T1) Particles and fields and their interactions: Progress report.** (Boston Univ., MA (USA). Dept. of Physics). 3 Dec 1986. Contract AC02-83ER40118. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003387.

The research activities undertaken concern the phenomenology and theory of elementary particle physics and pertinent questions in field theories. Efforts are directed to understanding the dynamical features of particle physics from gauge field models of electroweak and strong interactions to the unification of strong and electroweak forces, with the possible addition of gravitational forces. A portion of our future activities will focus on the interface of cosmology and particle physics.

12648 **(DOE/ER/40213—2) Theory and phenomenology of strong and weak interaction high energy physics: [Technical progress report, 5/1/86-4/30/87].** Thews, R.L. (Arizona Univ., Tucson (USA). Dept. of Physics). 29 Dec 1986. Contract FG02-85ER40213. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004010.

The research reported includes: low energy quark-hadron dynamics; quark-gluon models for hadronic interactions, decays and structure; mathematical and physical properties of nonlinear sigma models, Yang-Mills theories, and Coulomb gases, which are of interest in both particle physics and condensed matter physics; statistical and dynamical aspects of hadronic multiparticle production. 28 refs. 12649 **(DOE/ER/40215—T4) Detecting the radiation amplitude zero in $e^{+-}p \rightarrow e^{+-}p\gamma$.** Samuel, M.A.; Reid, J. (Oklahoma State Univ., Stillwater (USA). Dept. of Physics). Oct 1986. Contract FG05-85ER40215. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003920.

Results showing the radiation amplitude zero in $e^{+-}p \rightarrow e^{+-}p\gamma$ are presented. There are two terms contributing to the differential cross section in each case. One term has the zero while the other does not. Nevertheless, there remains a sizeable dip which could be experimentally detected at HERA (DESY). The position of the dip provides a measure of the quark charges via real photons.

12650 **(DOE/ER/40215—T5) See-saw masses for quarks and leptons in an ambidextrous electroweak interaction model.** Rajpoot, S. (Oklahoma State Univ., Stillwater (USA). Dept. of Physics). Dec 1986. Contract FG05-85ER40215. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003922.

An ambidextrous electroweak interaction model with SU(2)/sub L/XSU(2)/sub R/XU(1) gauge symmetry is described in which the conventional quarks and leptons are accompanied by a set of new fermions that transform as singlets of SU(2)/sub L/XSU(2)/sub R/. The model has only two doublets of Higgs scalars. The masses of all known quarks and leptons result from the see-saw mechanism between the conventional fermions and the new "singlet" fermions. Neutrino neutral current interactions are identical to those of the standard SU(2)/sub L/XU(1) model. The singlet fermion masses lie in the 100-GeV to 1-TeV range to be probed by the oncoming accelerators of the 1990's.

12651 **(EFI—726(41)-84) Proton lifetime in SO(10) grand unification model.** Asatryan, H.M.; Ionnisyan, A.N. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)). 1984. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700374.

A model of grand unification based on SO(10) orthogonal group is considered. They symmetry is violated to standard SU(3)sub(C) x SU(2)sub(L) x U(1)sub(Y) in two stages via the vacuum averages of the 45 and 126 Higgs fields. Using the renormgroup equations the scale Msub(X) of the SO(10) symmetry breaking and the scale Msub(R) of the left-right symmetry breaking were calculated in two-loop approximation. It has been shown that the proton lifetime in the SO(10) model can be rather large in the ramework of recent experimental restrictions on the value of Weinberg angle and agreed with available data on the proton decay

measurements. Possible limitations on the neutrino mass arising in the model were also considered. 13 refs.

12652 **(EFI—728(43)-84) Transverse momentum distribution of the three-jet event cross section in e^+e^--annihilation.** Shakhnazaryan, Yu.G. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)). 1984. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700366.

The differential in the variables T (momentum of the most energetic parton) and x sub(perpendicular) (transverse momentum with respect to the axis T vector momentum of each of the two remaining partons) cross section of the three-jet process $e^+e^- \rightarrow q$ anti qg is calculated in the first order of QCD. The transverse momentum distribution is also found that is integrated over all T in the range of values T admissible for the three-jet event. The contribution in the mentioned distributions of the three regions, differing by the relative value of the gluon momentum, is investigated with a view to reveal the possibility of identification of quark-antiquark and gluon jets. 7 refs.; 4 figs.; 1 tab.

12653 (INIS-SU—365, pp 22-29) **Upper limits for cumulative isobars, rho-meson production cross sections determined from the analysis of inclusive spectrum deformations.** Litvinenko, A.G.; Stavinskij, V.S. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780050. (N—12-85).

In JINR rapid commutations. Collection.

The upper limits of production cross sections of rho and Δ^{++} on nuclei are obtained for kinematic variable forbidden region for free nucleon-scattering fron the well-known inclusive production cross sections of π mesons and protons. These values are interesting for planning corresponding experiments. The maximally possible inclusive differential cross sections for production of rho and Δ^{++} are calculated. These cross sections are supposed to be described by universal dependences on cumulative number and transverse momentum obtained during experimental investigation of meson and baryon production on nuclei in cumulative region. It is shown that the inclusive spectrum of decay products decreases with the increasing cumulative number faster than the primary resonance spectrum. As a result, spectra of decay π mesons and protons contribute not more than 1 percent to the total inclusive spectra of π mesons and protons above 0.5 GeV/c momentum.

12654 **(ITF—85-51-R) High-energy hadron scattering in a dipole Pomeron model.** Vall, A.N.; Enkovskij, L.L.; Struminskij, B.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 33p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700368.

A model for elastic diffraction of hadrons with a double vacuum pole exchange is developed. Rescattering corrections are calculated within the framework of the U-matrix formalism. The connection with multiple production characteristics is studied. Experimentally measurable consequences of the model are discussed. 24 refs.; 5 figs.

12655 **(ITP—85-26-E) Dipole Pomeron in Reggeon theory with $\alpha(0) > 1$.** Martynov, E.S. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700370.

The contribution that comes from nonenhanced Reggeon diagrams within the framework of a theory with the intercept of Pomeron trajectory α sub(P)(0)>1 is investigated. The asymptotic regime where σsub(tot) approximately σsub(el) approximately σsub(inel) approximately ln s is shown to be possible withint the theory. The hadrons mean multiplicity is calculated. The multipomeron interaction taken into account is shown to lead to mean multiplicity of produced particles n approximately approximately ln ^{2}s. 14 refs.; 6 figs.

12656 **(ITP—85-99-E) Hadronic total cross sections: which Pomeron do they prefer.** Kobylinsky, N.A.; Kosenko, A.I.; Martynov, E.S.; Timokhin, V.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700373.

All data on nucleon-nucleon and meson-nucleon total cross sections are analyzed in a scheme with varying Pomeron shape and standard form of secondary Reggeons. Two solutions are found which result in essentially different asymptotic behaviour, but describe equally well the data at energies attained. Two theoretical possibilities for the Pomeron are discussed: the dipole and the froissaron. 10 refs.; 7 figs.; 1 tab.

12657 **(ITP—85-122-E) Contribution of the two-pion exchange potentials to the P-odd pp-scattering asymmetry at low energies.** Musakhanov, M.M.; Podgornov, Yu.Yu. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700369.

The P-odd asymmetry Asub(pp) of the pp-scattering is calculated within the potential approach for 15 and 45 MeV taking account of the isovector 2π-exchange in additionto the rho$_0\omega$-exchanges. The corresponding 2 π-potentials areobtained with the account of Δ-isobar configurations. The main contribution of the 2π-exchange to the Asub(pp) is shown to lie in the range of larger internucleon distances than that of the rho$_0$, ω-exchange the former must be taken into account while calculating the Asub(pp). The obtained 2π-exchange contribution to the Asub(pp) is comparable with that of the rho$_0$, ω-exchange. 30 refs.; 6 figs.

12658 **(KFTI—85-11) Polarization phenomena in the heavy lepton radiative decay, tau $\rightarrow \nu+\pi+\gamma$.** Rekalo, M.P. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR); AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1984. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700367.

The Stokes parameters are found for the protons produced by the heavy lepton decay to a pion and γ-quantum, tau $\rightarrow \nu+\pi+\gamma$, in function of the vector and axial form factors of the $\pi\gamma W^{**}$ vertex (W is a virtual W-boson in the time-like transferred momentum range) as well as in function of the possible tau-lepton anomalous magnetic moment. In principle, one may determine the following combinations of the vector v(t) and axial a(t) form factors in the nonpolarized lepton decay: chemical bondα(t)chemical bond^2, chemical bondv(t)chemical bond^2, Reav *, ReV(t), Rea(t) and ImV(t) (if it is measured the P-even, T-odd linear polarization of γ-quantums which is characterized by the Stokes parameter zeta $_1$). The Ima(rt) and ImV(t) values define the dependence of the tau $\rightarrow \nu+\pi+\gamma$ decay possibility on the tau-lepton cross polarization (at the nonpolarized γ-quantum production). The dependence of decay possibility on longitudinal components of the tau-lepton polarization vector characterizes P-odd effects in the tau $\rightarrow \nu+\pi+\gamma$ decay. 24 refs.; 4 figs.

12659 **(PREPRINT—88) Example of delta-problem arising in a finite difference context: direct and inverse problem for the discrete analog of the equation Psi + upsilon Psi = sigma Psi sub gamma.** Ragnisco, O.; Santini, P.M.; Briggs, S.C.; Ablowitz, M.J. (Rome Univ. (Italy)). Dec 1985. 11p. (ETN—86-97922). NTIS, PC A02/MF A01.

The direct and inverse spectral problem for the discrete analog of the equation Psi sub xx + upsilon Psi = delta Psi gamma is solved in the framework of delta bar theory. The time evolution of the spectral data for the simplest nonlinear differential-difference equations associated to this linear problem is derived.

12660 **(SLAC-PUB—4138) Detection of Higgs bosons decaying to bottom quarks.** Gilman, F.J.; Price, L.E. (Stanford Linear Accelerator Center, Menlo Park, CA (USA); Argonne National Lab., IL (USA)). Nov 1986. Contract AC03-76SF00515. 3p. (ANL-HEP-CP—86-125; CONF-8606215—20). NTIS, PC A02. File Number DE87003269.

From Summer study on the physics of the superconducting super collider; Snowmass, CO, USA (23 Jun 1986).

Several developments affecting the possibility of Higgs detection are discussed. These include the level of certainty about the t quark mass, Monte Carlo programs to generate both signal and background events, and separation and/or enhancement of heavy

quark jets from jets due to light quarks or gluons, and the possibility that the neutral Higgs decay into bottom quarks might be the decay mode of choice for detecting the intermediate mass Higgs. Possible means of detection of an intermediate mass Higgs at the SSC, particularly if a prominent decay mode is to bottom quarks, are examined, using the PYTHIA Monte Carlo program to generate both signal and background events. For the signal, events were generated in which Higgs bosons are created in proton-proton collisions, with the Higgs decaying into bottom quarks. The presence of W or Z bosons, created in the same proton-proton collision, is used to enhance the likelihood of Higgs production and to reduce the potentially enormous background. It is found that the Higgs decay to bottom quarks, if important, would be more favorable for detection of the Higgs than decay to top quarks was found to be because of the smaller background. 3 refs., 4 figs. (LEW)

12661 **Neutrino counting at e^+e^- colliders and E_6 gauge theory.** Barger, V.; Deshpande, N.G.; Whisnant, K. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706; Institute of Theoretical Science, University of Oregon, Eugene, Oregon 97403; Physics Department, Florida State University, Tallahassee, Florida 32306). *Physical Review Letters;* **57**: No. 17, 2109-2111(27 Oct 1986).

We examine the effect on neutrino counting in $e^+e^- \rightarrow \nu\text{nu-bary}$ due to light right-handed neutrinos and extra gauge bosons that could occur in some superstring-inspired E_6 gauge models. The effect can be as high as $\Delta N/\text{sub } \nu/\approx 0.75$ at $\sqrt{s} = 30$ GeV, but is smaller at higher energies.

12662 **Possible manifestation of quark-gluon plasma in multiplicity distributions from high-energy reactions.** Fowler, G.N.; Friedlander, E.M.; Weiner, A.R.M.; Wilk, G. (Physics Department, University of Marburg, Federal Republic of Germany). *Physical Review Letters;* **57**: No. 17, 2119-2122(27 Oct 1986).

We show that in order to explain the observed dependence of multiplicity distributions on energy and shifts of the centers of rapidity bins it is sufficient to assume the existence of two sources. One source is concentrated at small rapidities and has properties of a thermally equilibrated system as could be expected from a quark-gluon plasma. The other one, contributing to the whole rapidity region, displays characteristics of bremsstrahlung emission.

12663 **Physics of the quark-gluon plasma.** McLerran, L. (Physics Department MS-106, Fermi National Accelerator Laboratory, Batavia, Illinois 60510). *Reviews of Modern Physics;* **58**: No. 4, 1021-1064(Oct 1986).

This paper is based on a series of eleven lectures that were presented at a workshop on The Physics of the Quark-Gluon Plasma held at Hua-Zhong Normal University in Wuhan, People's Republic of China, in September 1983. The lectures were updated for publication in November 1985. They cover perturbation theory of the plasma at high temperature, as well as the nonperturbative methods and results of lattice gauge theory computations. Physical models of the confinement-deconfinement phase transition and the modes of chiral symmetry breaking are presented. The possibility that a quark-gluon plasma might be produced in ultrarelativistic nuclear collisions is briefly discussed in the introductory lecture.

12664 **Relativistic photon-Maxwellian electron cross sections.** Wienke, B.R.; Lathrop, B.L.; Devaney, J.J. (Los Alamos National Lab., Los Alamos, NM 87545). pp 977-980 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Temperature-corrected cross sections, complementing the Klein-Nishina set, are developed for astrophysical, plasma, and transport applications. The set is obtained from a nonlinear least squares fit to the exact photon-Maxwellian electron cross sections, using the static formula as the asymptotic basis. Two parameters are sufficient (two decimal places) to fit the exact cross sections over a range of 0-100 keV in electron temperature, and 0-1 MeV in incident photon energy. The fit is made to the total cross sections, yet the parameters predict both total and differential scattering cross sections well. Corresponding differential energy cross sections are less accurate. An extended fit to (just) the total cross sections, over the temperature and energy range 0-5 MeV, is also described.

12665 **World-sheet supersymmetry.** Braden, H.W.; Frampton, P.H. (Institute of Field Physics, University of North Carolina, Chapel Hill, Chapel Hill, North Carolina 27514). *Physical Review Letters;* **57**: No. 17, 2112-2114(27 Oct 1986).

For the classical nonlinear σ model on a general target manifold M, the progressive imposition of world-sheet supersymmetry (with torsion) from (1,0) to (2,2) is systematically analyzed and generalized; at each step, implications both for M and for the background gauge connection are stated. Quantum conformal invariance is then imposed. Our analysis applies to superstrings without known space-time supersymmetry.

12666 **(CALT—68-1330) Yang-Mills vacuum: An attempt of lattice loop calculus.** Furmanski, W.; Kolawa, A. (California Inst. of Tech., Pasadena (USA)). [1985]. Contract FG03-85ER25009. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003562.

An attempt is made to derive and to solve the Schrodinger equation in the low energy region (vacuum, first excitation, etc.) of the Yang-Mills theory on the lattice. The complete orthonormal basis in the physical Hilbert space is constructed by classifying independent solutions of Gauss's law. Loops of electric flux are chosen as elementary variables. The loop space Hamiltonian is derived, an ansatz is made for the low energy wave functionals and the Schrodinger equation is solved in the (truncated) loop basis. The resulting physical picture for the Yang-Mills vacuum in the cross-over region is that of, still quite dilute, gas of fluctuating loops. Definite candidate for the confining force emerges: the repulsive non-abelian loop-loop interaction (rather weak but persistent) generates an effective external field ("external pressure") prohibiting unbounded loop size fluctuations. The negative sign (repulsion) is universal for all compact groups. Preliminary numerical results, so far mainly of illustrative character, are presented. 8 refs., 22 figs.

12667 **(ITEP—42-1985) Wess-Zumino Lagrangians in chiral models and quantization of their constants.** Krichever, I.M.; Olshanetskij, M.A.; Perelomov, A.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700327.

A general method of constructing the Wess-Zumino-type Lagrangians is proposed. The corresponding constants are shown to be quantized. Some examples in 1d, 3d and 4d dimensions are considered. 8 refs.

12668 **(ITEP—87-1985) On quantization of supersymmetric theories.** Smilga, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700333.

A recipe to resolve ordering ambiguities in the quantum Hamiltonian of supersymmetric theories is suggested. The Weyl ordering prescription for supercharge operators should be employed to preserve SUSY algebra on the quantum level. The quantum Hamiltonian does not generally coincide with the Weyl ordered classical Hamiltonian, the difference being due to the fact that the Weyl symbol of anticommutator of supercharges does not generally coincide with the Poisson bracket of their Weyl symbols (i.e. the classical Hamiltonian). The suggested procedure is applied in the exam-

ples of N=1 and N=2 supersymmetric σ-models analyzed in the constant field limit. 16 refs.

12669 (ITEP—95-1985) Renormalizations in 1/N expansion in σ-model. Terent'ev, M.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700328.

Renormalization of the O(N) Σ-model beyond the framework of usual perturbation theory is investigated using the 1/N expansion. The intermediate normalization mass scale μ^2 is xplicitly introduced and the problem of factorization of small ($p<\mu$) and large ($p>\mu$) momenta are discussed. The work is a preliminary step in studying the operator expansion beyond perturbation theory. 10 refs.; 2 tabs.

12670 (ITEP—100-1985) How to quantize supersymmetric theories. Smilga, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700326.

A recipe for resolving the ordering ambiguities in quantum Hamiltonians of supersymmetric theories is suggested. The Weyl ordering procedure applied to classical supercharges expressed as functions on the phase space of a classically supersymmetric system is shown to result in quantum operators which satisfy usual SUSY algebra. The quantum Hamiltonian does not always coincide with the Weyl ordered classical Hamiltonian function. The difference is due to that the Weyl symbol of the supercharge anticommutator does not coincide with the Poisson bracket of their Weyl symbols (i.e. the classical Hamiltonian). The procedure is applied to supersymmetric σ-models (both N=2 and N=1 cases are analyzed) and also to the supersymmetric SU(2) Yang-Mills theory. Only quantum mechanical systems following from field theories when fields are assumed to be independent of space coordinates are considered. For gauge theories thesuggested recipe for quantization leads to the same result as the well-known Dirac recipe. 20 refs.

12671 (ITF—85-139-R) Generalized stochastic equations in field theory. Kozhamkulov, T.A. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700329.

The covariant stochastic equation in curved field space is derived. It is shown, that stochastic equations for various lattice gauge theories can be obtained using this equation. The finite difference stochastic field equations of the higher orders are proposed. The simple numerical models are used to demonstrate advantages of the proposed approach over the standard Parizi-Wu method. 7 refs.

12672 (JINR—E-2-85-732) Eguchi-Hanson type metrics from harmonic superspace. Gal'perin, A.S.; Ivanov, E.; Ogievetsky, V.; Townsend, P.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Cambridge Univ. (UK). Dept. of Applied Mathematics and Theoretical Physics). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700334.

The harmonic superspace provides a framework for constructing general hyper-Kahler metrics. The simple example of the Taub-NUT manifold was given previously. Here we show that the harmonic superspace Lagrangian Lsup(+4)=1/4[(Dsup(++)ω)sup(2)-(xisup(++)sup(2)ωsup(-2)) for a single interacting hypermultiplet describes an N=2 superssymmetric hyper-Kahler σ-model witn the d=4 Eguchi-Hanson instanton as its target manifold. The potential ω^{-2} is the unique one invariant with respect to a Pauli-Gurseylike SU(2) group. We present other harmonic superspace actions which we expect to yield some other types of hyper-Kahler metrics, including the multi-Eguchi-Hanson and Calabi ones, etc. 17 refs.

12673 (JINR—E-4-85-526) Representations which satisfy identities associated with tensor operators. Second-degree tensor operators transforming under the representations: (Λb), ($2\Lambda_3$) of so(2n,c) and ($4\Lambda_1$), ($2\Lambda_3$) of sp(2n,c). Iosifescu, M.; Scutaru, H. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Institutul Central de Fizica, Bucharest (Romania)). 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700335.

The present work continues the determination (started insup(/6/)) of the representations p of semisimple Lie algebras L for which Tsub(σsup((2))(p)sigh-identity Tsub(σ)sup((2)) (x_1, ..., xsub(n)).=0, where Tsub(σ)sup((2)) (x_1, ..., xsub(n)) is a tensor operator transforming under a subrepresentation σ of (ad x ad)sub(s), and xsub(i) are the generators of p. For L=so(2n, c) it is proved that if σ=(Λ4), then p=(kΛ1) and that if σ=(2Λ3), then p=(Λsub(n). For L=sp(2n, c) it is proved that of σ=(4Λ1), then p=(Λ1) and if σ=(2Λ3), then there exists no solution to the equation Tsup(2)sub(2Λsub(2))(p)=0. (Λsub(i) is the highest weight of the fundamental representation (Λsub(i)) (i=1, ..., n)). 7 refs.

12674 (PUC-TN—32/84) Metastability in Field Theory and Statistical Mechanics. Carvalho, C.A. de. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). 1984. 11p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700330.

After a phase transition analysis which can occur in the framework of a scalar field theory, at finite temperature and in presence of a external field, possibles metastable situations are studied and also how is their relationship with the transitions. In both cases it is used a semiclassical approximation to the theory which, in Statistical Mechanics, corresponds to the droplet-bubble model. (L.C.).

12675 (UWThPh—86-24) Supersymmetry of the photon. Rumpf, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 52p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87700331.

The supersymmetric massless states of a relativistic extension of Witten's supersymmetric quantum mechanics are shown to correspond to abelian gauge fields realized by antisymmetric tensors. The massive states, which are only partially supersymmetric, include spin-1 and spin-0 particles. In particular the Maxwell and Proca fields are obtained from N = 2 supersymmetric relativistic mechanics by first quantization in much the same way as the Dirac theory arises in the N = 1 case. The particles may be coupled supersymmetrically to external scalar and complex hermitian tensor fields. The latter reduce in special cases to the Riemannian metric of external gravitation and the Kaehler metric implied by a vector field coupling. All the couplings exhibit a quadrupole characteristics of the particles. In particular supersymmetry requires their electric charge and magnetic dipole moment to vanish, and there is no coupling to torsion in Riemann-Cartan spacetime. Quantization in external fields yields covariant generalizations of the classical tensor field equations. Finally classical equations of translational and spin motion involving only real quantities are obtained from the Heisenberg equations.

12676 (UWThPh—86-25) Sum rules in QCD and the determination of the vacuum condensates. Bertlmann, R.A. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700332.

We review QCD sum rules like the 'magic moments'. Gaussian sum rules and FESR (finite energy sum rules). A determination of vacuum condensate values within FESR is presented.

12677 Is there an upper limit to fermion masses?. Einhorn, M.B.; Goldberg, G.J. (NORDITA, Copenhagen, Denmark and Randall Laboratory of Physics, University of Michigan, Ann Arbor, Michigan 48109). *Physical Review Letters;* **57**: No. 17, 2115-2118(27 Oct 1986).

A fermion mass generated by spontaneous symmetry breaking is proportional to its Yukawa coupling y to a Higgs field. Like the Higgs-field self-coupling, y may well be trivial and diverge at a finite energy scale Λ/sub f/, corresponding to an upper limit on fer-

mion masses. We verify this by solving a simple model by means of a 1/N expansion. Applied to the standard model, this suggests that there is an upper limit to quark and lepton masses. These results have implications for the "decoupling" of heavy fermions and bear on the issue of whether apparently "anomalous" gauge theories can be consistently quantized.

12678 **Evidence for scaling in lattice QCD at $\beta = 5.7$.** Sexton, J.C.; Thacker, H.B. (Fermi National Accelerator Laboratory, Batavia, Illinois 60510). *Physical Review Letters;* **57**: No. 17, 2131-2134(27 Oct 1986).

The SU(3) deconfinement temperature is studied on asymmetric lattices as a probe of scaling. For lattices with four sites in the temperature direction (β/sub c/$\cong$5.7) we find precise agreement between the measured asymmetry dependence of the Λ parameter and that predicted by one-loop perturbation theory. The agreement holds over a large range of asymmetry ($0.65 \leq \xi \leq 1.1$) and implies that violations of perturbative scaling above $\beta \cong 5.7$ are independent of asymmetry and therefore unlikely to be lattice artifacts. This provides evidence that the coupling range 5.7approx. $<\beta$approx. $<$6.2 is a regime of nonperturbative but universal scaling.

12679 **Normal and antinormal ordering of boson operator functions.** Willis, B.L.; Zweifel, P.F. (Virginia Polytechnic Institute and State Univ., Blacksburg). *Physics Letters* [*Section*] *A;* **108A**: No. 7, 322-324(15 Apr 1985). Contract AS05-80ER10711.

It is shown that the divergences associated with antinormally ordered forms of boson operators, as discovered computationally by Baltin, is due to an unjustifiable interchange of order of summation. 9 references.

12680 **Use of compensators to break supersymmetry in an $N = 1$ supergravity theory.** Mahanthappa, K.T.; Staebler, G.M. (Imperial College, London, England). *Physics Letters* [*Section*] *B;* **146B**: No. 5, 323-327(18 Oct 1984).

The authors consider an $N = 1$ supergravity theory with multiple compensators and show that supersymmetry is broken by a solution to the equation of motion of a compensator. When a chiral scalar superfield is coupled to supergravity, the authors discuss various aspects of supersymmetry breaking and show that the super-Higgs-Kibble effect is operative. Possible applications of this mechanism of supersymmetry breaking in model building and extended supergravity theories are indicated. 12 references.

12681 **Guided random walks for solving Hamiltonian lattice gauge theories.** Chin, S.A.; Negele, J.W.; Koonin, S.E. (Univ. of California, Los Angeles). *Annals of Physics (New York);* **157**: No. 1, 140-165(1 Oct 1984). Contract AC02-76ER03069.

Motivated by developments for many-particle quantum systems, a Monte Carlo method for solving Hamiltonian lattice gauge theories without fermions is presented in which a stochastic random walk is guided by a trial wave function. To the extent that a substantial portion of the local structure of the theory can be incorporated in the trial function, the method offers significant advantages relative to existing techniques. The method is applicable to the study of SU(N) lattice gauge theories, and its utility is demonstrated by solving the compact U(1) gauge theory in three spatial dimensions. 32 references, 6 figures.

12682 **Chiral symmetry breaking with octet and sextet quarks.** Kogut, J.B.; Shigemitsu, J.; Sinclair, D.K. (Univ. of Illinois, Urbana-Champaign). *Physics Letters* [*Section*] *B;* **145B**: No. 3,4, 239-242(20 Sep 1984). Contract AC02-76ER01545;FG02-84ER45105.

The finite temperature chiral transition is studied in the quenched approximation for octet and sextet quarks. The ratios of critical temperatures are estimated to be T/sub c//sup (8)//T/sub c//sup (3)/ $\sim$ 7.5 +/- 1.5 and T/sub c//sup (6)//T/sub c//sup (3) $\sim$ 12.0 +/- 2.5. 12 references, 3 figures.

12683 **Two-loop finite supersymmetric SU_5 theory: towards a theory of fermion masses.** Jones, D.R.T.; Raby, S. (Univ. of Colorado, Boulder). *Physics Letters* [*Section*] *B;* **143B**: No. 1-2-3, 137-141(9 Aug 1984).

The authors present a realistic two-loop finite supersymmetric grand unified theory. The gauge group is SU_5 and the low energy theory includes three families of quarks and leptons with the minimal Higgs doublet content. The most important feature of the model is the non-trivial constraint of finiteness on the quark and lepton masses. The authors find sin^{2}theta/sub w/ = 0.21 and /sub b//m/sub tau/ = 1.8 (at M/sub w/) and predict a top quark mass of 155 GeV. Nucleon decay is dominated by colored Higgs triplet exchange with characteristic decay modes $p \rightarrow K^0\mu^+$, $p \rightarrow K^0$nu vector/sub μ/ and $n \rightarrow K^0$nu vector/sub μ/. 18 references.

12684 **Non-abelian isometries and dimensional reduction.** Mansouri, F.; Witten, L. (Univ. of Cincinnati, OH). *Physics Letters* [*Section*] *B;* **140B**: No. 5-6, 317-320(14 Jun 1984). Contract AC02-76ER02978.

Dimensional reduction is carried out for space-times, with or without torsion, which possess non-abelian isometries. The spectra and the equations of motion of the dimensionally reduced theory are obtained directly from the higher dimensional theory. The spectra of the reduced theories are naturally given in terms of scalar fields and antisymmetric tensor field strengths. A method of studying the dependence on the extra dimensions is suggested. 3 references.

12685 **Chiral anomaly and a class of two-loop finite supersymmetric gauge theories.** Jones, D.R.T.; Mezincescu, L. (Univ. of Colorado, Boulder). *Physics Letters* [*Section*] *B;* **138B**: No. 4, 293-295(19 Apr 1984). Contract AC02-81ER40025.

By means of the supercurrent anomaly the authors derive a formula for the two-loop β-function of the matter self-interactions in an arbitrary massless $N = 1$ supersymmetric gauge theory. As a trivial consequence the authors show that if such a theory is one-loop finite it is also two-loop finite, and the authors discuss whether this finiteness persists to all orders. 22 references.

12686 **β-function in supersymmetric Yang-Mills theory.** Jones, D.R.T.; Mezincescu, L. (Univ. of Colorado, Boulder). *Physics Letters* [*Section*] *B;* **136B**: No. 4, 242-244(8 Mar 1984).

The authors show by means of the Adler-Bardeen theorem how to calculate the two-loop β function from a one-loop calculation of the superconformal anomaly in a supersymmetric gauge theory with arbitrary superpotential. The $N = 2$ and $N = 4$ cases are also briefly discussed. 18 references.

12687 **Non perturbative anomalies in higher dimensions.** Elitzur, S.; Nair, V.P. (Institute for Advanced Study, Princeton, NJ). *Nuclear Physics;* **B243**: 205-211(1984). Contract AC02-76ER02220.

The authors study how nonperturbative anomalies can occur in dimensions higher than four and their implications on the consistency of the theory. 9 references, 1 table.

12688 **Self-similar replication approach to random-fields systems.** Shapir, Y. (Brookhaven National Lab., Upton, NY). *Journal of Physics C: Solid State Physics;* **17**: L809-L815(1984). Contract AC02-76CH00016.

Very long relaxation times are present in random-field systems near their critical points. As the correlation length grows, already above the transition, it is necessary to differentiate between the short-time (local) regime and the long-time (global) one. A self-similar replication procedure is proposed in order to separate iteratively between slow and fast modes. Recursion relations among effective exponents on successive time scales are obtained and apparent reduced dimensions, in both regimes, are deduced. For the short time behavior of Ising systems the authors find a dimensional reduction by one, both in $d = 3$ and in $d = 2$ (the lower critical dimension). The results are in agreement with the measurements of the specific heat and the correlation length performed on random

antiferromagnets by linear birefrigence and neutron scattering respectively. 22 references.

6510 Nuclear Physics

12689 (CONF-8610150—Summ.) Mini-proceedings of the workshop on heavy ion physics and instrumentation for a 15-Tm booster and storage ring. (Oak Ridge National Lab., TN (USA)). Nov 1986. Contract AC05-84OR21400. 83p. NTIS, PC A05. File Number DE87002594.

From Workshop on heavy-ion physics and instrumentation for a 15-TM booster and storage ring; Oak Ridge, TN, USA (2 Oct 1986).

The goal of this workshop was to probe in depth a few of the areas of possible physics made possible by the availability of an intermediate energy heavy-ion physics facility. There was a special emphasis on physics that would be possible only with a storage/cooler ring. Topics discussed were nuclei far from stability, quantum electrodynamics, giant resonances and photonuclear reactions, and high energy gamma-ray production. Individual papers in this meeting were abstracted separately.

12690 (DOE/ER/01067—T1) Triangle Universities Nuclear Laboratory: Annual report, TUNL XXV, 1 September 1985-31 August 1986. (Triangle Universities Nuclear Lab., Durham, NC (USA)). 1986. Contract AC05-76ER01067;AS05-76ER02408;AS05-76ER03624. 223p. NTIS, PC A10/MF A01; GPO Dep. File Number DE87003327.

The varied research programs described in this report reflect a decision to devote major resources to the study of the multiple facets of nuclear structure which can be probed through light-ion and neutron induced nuclear reactions. Particular emphasis is placed on reactions induced by polarized protons, deuterons, and neutrons. A major commitment continues towards the study of the statistical properties of nuclear structure revealed by elastic and inelastic scattering experiments using ultra high resolution proton beams. A third major laboratory commitment involves measurements of fast neutron cross sections required by the Department of Energy's program for the development of controlled thermonuclear fusion. (DWL)

Antiproton production rates have been increasing by an order of magnitude every 2.5 years. Projections based on the past 30 years of production indicate that in the next decade and beyond, antiprotons will be produced at a sufficient level for applied research in the areas of prime power and propulsion. To accomplish this level of production significant progress in accelerator technology in necessary. Increasing the production rates of antiprotons is a high priority task at facilities around the world. Rapid progress can be expected in the short term. Coupled to state-of-the-art pulsed power and RFQ decelerator technology, the storage of antiprotons in a convenient and portable device suitable for applications research in these areas can be accomplished using the well-established ion trap technology used in atomic physics. Storage of antiprotons for large scale applications requires technological developments in atomic-scale physics for which ion traps will serve as an intermediate technology providing ultra-low energy antriprotons. Antiprotons power sources offer unique advantages in many applications. To realize these applications will require a broad interdisciplinary effort in both basic and applied research.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

A theoretical and experimental program is underway to determine the feasibility of a measurement of the neutron-neutron scattering cross section of 10-12% uncertainty using small-angle, low center-of-mass energy, colliding neutron beams derived from a fusion-fission nuclear source. The neutron-neutron scattering length would be inferred from the measured cross sections. The general concept of the experiments and progress are discussed.

12695 Nuclear decay data: Some applications and needs. Reich, C.W. (Idaho National Engineering Lab., EG & G Idaho, Inc., Idaho Falls, ID). pp 647-658 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Nuclear decay data have broad relevance to a number of basic scientific disciplines as well as to many areas of technology. In this paper, the authors discuss selected applications where decay data are making, or promise to make, important contributions. The following specific illustrations are discussed: the large body of precise new actinide-nuclide decay data produced through the work of the recently concluded IAEA Coordinated Research Program on the Measurement and Evaluation of Transactinium Isotope Nuclear Decay Data; the use of actinide-nuclide half-lives as reference standards in nuclear-data measurements; and the relevance of short-lived fission-product decay data to basic physics and reactor technology and some of the problems and challenges that they present to both theory and experiment.

From INS international symposium on hypernuclear physics; Tokyo, Japan (20 Aug 1986).

A review of the current and future hypernuclear physics programs at Brookhaven National Laboratory is presented. The present S = -1 and proposed S = -2 dibaryon research programs are highlighted. 24 refs., 7 figs.

12697 **(DOE/ER/40146—T1) [Medium energy physics at Syracuse University: Technical progress report].** Souder, P.A. (Syracuse Univ., NY (USA). Dept. of Physics). 9 Oct 1986. Contract FG02-84ER40146. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87000955.

The primary focus of research has been an experiment at the MIT-Bates Linear Accelerator Center to measure the spin-dependence of elastic scattering of electrons from carbon. The Syracuse University Medium Energy Physics Group is also part of a collaboration which will measure the tensor polarization of deuterons scattered by electrons. Finally, analysis has been completed for an experiment at LAMPF in which the first observation of the exotic ion $\mu^+e^-e^-$ was made. 17 refs., 18 figs., 2 tabs.

12698 (INIS-SU—365, pp 6-14) **Suppression of the annihilation less break-up processes in antiproton - ^{4}He interaction.** Batusov, Yu.A.; Bunyatov, S.A.; Nichitiu, F. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780050. (N—12-85).

In JINR rapid commutations. Collection.

Production of charged particles in the 19.6, 48.7 and 179.6 MeV antiproton-^{4}He scattering has been measured at LEAR facility at CERN using the streame chamber in magnetic field. It has been found that the multiplicity distributions of charged particles are practically independent of the antiproton incident energy. This demonstrates the strong suppression of the annihilationless break-up reactions of the (anti p, anti p') type, the cross section of which is by an order of magnitude less than the cros section of the similar reactions inproton-^{4}He scattering. 14 refs.; 1 fig.; 1 tab.

12699 **(SLAC-PUB—4134) Electrodisintegration of few body systems at SLAC and the Y scaling approach.** Meziani, Z.E. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Oct 1986. Contract AC03-76SF00515. 9p. (CONF-8610196—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003267.

From European workshop on few body physics; Rome, Italy (7 Oct 1986).

It is proposed that extraction of the scaling function F(y) from the transverse and longitudinal response functions in inclusive quasi-elastic electron scattering from ^{3}He and ^{4}He is a powerful method to either study the validity regime of the impulse approximation by allowing the access to the high nucleon momentum components in these nuclei, or the electromagnetic properties of bound nucleons. 19 refs., 4 figs.

12700 **Production of tritium and /sup 4/He in a large cylinder of /sup 6/LiD irradiated with 14-MeV neutrons and comparison with Monte Carlo calculations.** Goldberg, E.; Barber, R.L.; Griffith, C.M.; Nethaway, D.R.; Haight, R.C. (Univ. of California, Lawrence Livermore National Lab., Livermore, CA). *Nuclear Science and Engineering;* **94**: No. 2, 120-135(Oct 1986). Contract W-7405-ENG-48.

A large cylindrical assembly of /sup 6/LiD was irradiated by neutrons from a high-intensity deuterium-tritium source. Small samples of /sup 6/Li, /sup 7/Li, and /sup 6/LiH, all encapsulated in lead, were positioned along the assembly axis and served as indicators for /sup 4/He and tritium production. The amount of /sup 4/He was determined by isotope dilution mass spectrometry while the tritium content of the /sup 6/LiH wafers was measured by proportional counting of gas samples. Careful comparison of the results with TART Monte Carlo calculations showed excellent agreement. For /sup 4/He generation, the experimental values were 1.01 +. 0.06 times those of the calculations, while for tritium the ratio was 1.055 +. 0.07.

6513 Nuclear Properties And Reactions, A=6-19, Experimental

12701 **(DOE/ER/03244—130) Triple-differential cross sections of the (πi/,pp) reaction on lithium isotopes.** Rieder, R.; Barnes, P.D.; Bassalleck, B.; Eisenstein, R.A.; Franklin, G.; Grace, R.; Maher, C.; Pile, P.; Szymanski, J.; Wharton, W.R. (Carnegie-Mellon Univ., Pittsburgh, PA (USA); Kyoto Sangyo Univ. (Japan); Massachusetts Inst. of Tech., Cambridge (USA); Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center; Washington Univ., Seattle (USA)). 1985. Contract AC02-76ER03244;W-7405-ENG-36. 46p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003380.

The (π^+,pp) reactions on ^{6}Li and ^{7}Li have been studied at T/sub π/ = 59.4 MeV with high resolution. The first triple-differential cross sections for these reactions are presented. The data are fitted to a T-matrix and compared to the $\pi^+ d \rightarrow pp$ reaction. A model in which the pion is absorbed on a $^3S_1$ (pn) pair in the lithium nucleus describes many features of the data very well. An extrapolation of our data into unmeasured regions of phase space suggests that about 60% of the pion absorption cross section on ^{6}Li at 59.4 MeV goes into the (π^+,pp) channel. One surprising feature of the data is that the ^{6}Li(π^+,pp)^{4}He (2^-) transition at 22.1 MeV excitation is strongly populated, similar to what is observed in the ^{6}Li(d,α)^{4}He reaction. This transition involves removing one nucleon from the 1p shell and one from the 1s shell. 25 refs., 15 figs., 3 tabs.

12702 **(DOE/ER/05172—0028) [Studies of heavy-ion induced reactions]: Annual progress report.** Mignerey, A.C. (Maryland Univ., College Park (USA). Dept. of Chemistry). Oct 1986. Contract AS05-76ER05172. 77p. (ORO—5172-0028). NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87003914.

An experiment was performed at the Lawrence Berkeley Laboratory Bevalac, extending previous studies using inverse reactions to 50 MeV/u ^{139}La incident on targets of C and Al. Studies of excitation energy division in lower energy division in lower energy heavy-ion reactions were furthered using kinematic coincidences to measure the excitation energies of primary products in the Fe + Ho reaction at 12 MeV/u. These results will provide important systematics for comparisons with previous measurements at 9 MeV/u on the same system and at 15 MeV/u on the Fe + Fe and Fe + U systems. Also studied were different aspects of 15 MeV/u Fe-induced reactions, with experiments performed at the Oak Ridge HHIRF. The first three contributions of this report constitute a major portion of the results from this research. Finally, at the Lawrence Berkeley Laboratory Bevalac a large detector array for coincident detection of fragmentation products in heavy-ion collisions below 100 MeV/u is being built. A list of publications, personnel, and activities is provided.

12705 **(JINR—E-1-85-662) Observation of anti D-mesons in nC-interactions at 40-70 GeV/c.** Aleev, A.N.; Aref'ev, V.A.; Balandin, V.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1985. 8p. (CONF-850721—27). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700397.

From International Europhysics conference on high energy physics; Bari, Italy (18 Jul 1985).

The production of anti D^0 and D^- mesons has been observed in neutron carbon interactions at 40-70 GeV/c. The experiment was performed with BIS-2 the spectrometer located in the neutron beam of the Serpukhov accelerator. The signals of anti D mesons were detected in the effective mass spectra $M(K^+(890)\pi^-)$ and $M(K^+(890)\pi^-\pi^-)$. The kinematical region of the detected anti D mesons is 30 GeV/c<Psub(L)<60 GeV/c and Psub(T)<1 GeV/c. For this region the partial cross sections are σ(nC→anti D^0+X)xBR=(0.9 +- 0.3) μb and σ(nC→D^-+X)xBR=(2.1 +- 0.7) μb. The longitudinal momentum spectrum in the region x>0.5 can be described by F(x) varies as (1-x)sup(N) with Nsub(anti)=1.1 +- 0.5 +- 0.4 and Nsub(Dsup(-))=0.8 +- 0.4 +- 0.4). The transverse momentum spectra were parametrized by the exponential function dσ/dpsub(T)sup(2) varies as exp(-Bpsub(T)sup(2)) with Bsub(anti D^0)=(1.4 +- 0.7) (GeV/c)sup(-2) and Bsub(Dsup(-))=(1.7 +- 0.8) (GeV/c)sup(-2). 9 refs.; 9 figs.

12706 **(KFTI—84-1) Reaction characteristics for proton radiative capture by light nuclei.** Rutkevich, N.Ya.; Kopanets, E.G.; Storizhko, V.E.; Kachan, A.S.; Korda, L.P.; Sheptulenko, E.V.; Startseva, T.N.; Emlyaninova, V.N. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1984. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700398.

The structure of imaginary and real parts of the elastic hadron testify to transformation of the structure scattering amplitude at high energies is studied in the limits of the suggested model based on the modified nonelastic overlapping function. The estimates of the structure testify to transformation of the structure in differential cross section of the "dip-secondary maximum" into the "arm". The effect is observed in pp-scattering on the SPS-collider. 9 refs.; 16 figs.; 7 tabs.

12707 **Total reaction cross section for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb between 10 and 35 MeV/nucleon.** Sahm, C.H.; Murakami, T.; Cramer, J.G.; Lazzarini, A.J.; Leach, D.D.; Tieger, D.R.; Loveman, R.A.; Lynch, W.G.; Tsang, M.B.; Van der Plicht, J. (Nuclear Physics Laboratory, University of Washington, Seattle, Washington 98195). *Physical Review [Section] C: Nuclear Physics;* **34**: No. 6, 2165-2170(Dec 1986).

Elastic scattering angular distributions for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb were measured for projectile energies between 10 and 35 MeV/nucleon. Total reaction cross sections were extracted by an optical model analysis and compared to the prediction of the Glauber model. This comparison suggests that the nucleus-nucleus total reaction cross section at intermediate and high energies is governed by the nucleon-nucleon cross section.

12708 **Helium production cross sections for 15-MeV neutrons on /sup 6/Li and /sup 7/Li.** Kneff, D.W.; Oliver, B.M.; Goldberg, E.; Haight, R.C. (Rockwell International Corp., Canoga Park, CA). *Nuclear Science and Engineering;* **94**: No. 2, 136-144(Oct 1986).

Total /sup 4/He production cross-section measurements have been made for /sup 6/Li and /sup 7/Li for 15-MeV neutrons. Isotopically enriched samples of lithium metal were comparded with an intense flux of T(d,n) neutrons from a rotating target neutron source. Following the irradiation, the accumulated /sup 4/He was determined by isotope-dilution mass spectrometry. The lithium samples and the incident neutron spectrum were accurately characterized, both by experimental methods and by calculational simulations. The measured /sup 4/He production cross sections are 0.512 +. 0.026 b for /sup 6/Li and 0.336 +. 0.016 b for /sup 7/Li, at an average neutron energy of 14.95 MeV.

6514 Nuclear Properties And Reactions, A=20-38, Experimental

12709 **/sup 36/S(t,pγ)/sup 38/S reaction.** Olness, J.W.; Warburton, E.K.; Becker, J.A.; Decman, D.J.; Henry, E.A.; Mann, L.G.; Ussery, L. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review [Section] C: Nuclear Physics;* **34**: No. 6, 2049-2054(Dec 1986). Contract W-7405-ENG-48;AC02-76CH00016.

The /sup 36/S(t,pγ) /sup 38/S reaction was used to populate levels in /sup 38/S up to 3-MeV excitation. A definite 2^+ assignment to the 1292-keV first-excited state was obtained from a (t,pγ) angular correlation. Doppler shift information provided lower limits of 0.45 and 0.2 ps for the mean lifetimes of the 1291→0 and 2825→1291 transitions. Evidence for a possible new level at 2805 keV was obtained from p-γ coincidence data. The known level spectrum of /sup 38/S is compared to predictions of a shell-model interaction utilizing the full sdpf model space. The E2 and M1 transition rates predicted by this calculation are also presented.

6515 Nuclear Properties And Reactions, A=39-58, Experimental

12710 **Coupled-channel analysis of nucleon scattering from /sup 40/Ca.** Delaroche, J.P.; Honore, G.M.; Tornow, W.; Walter, R.L. (Centre d'Etudes, de Bruyeres-le-Chatel). pp 901-904 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Differential cross sections and analyzing powers for neutron scattering from /sup 40/Ca have been measured at TUNL in the 10-17 MeV energy range. These measurements and other $\sigma(\theta)$ and σ/sub T/ measurements, as well as available /sup 40/Ca+p data, have been combined together in a coupled-channel analysis in order to trace the properties (energy dependencies, spin-orbit potentials, deformation parameters) of the nucleon + /sup 40/Ca potential up to 80 MeV.

12711 **Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru.** Katcoff, S. (Brookhaven National Lab., Upton, NY 11973). pp 557-560 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Targets of Cr, Fe, Zn, Rb, and Ru were irradiated in the hydraulic tube of the Oak Ridge HFIR reactor at a neutron flux of 2.6 x 10/sup 15/ n/cm/sup 2/sec for 1 day and 20 days. The reactor burn-up cross sections (in barns) of the radioactive product nuclides are: /sup 51/Cr, <10; /sup 59/Fe, <10; /sup 65/Zn, 60+.30; /sup 86/Rb, <20; /sup 103/Ru, <20.

12712 **Isovector resonances in pion charge exchange.** Bowman, J.D. (Los Alamos National Lab., NM). pp 549-559 of Nuclear structure 1985. Broglia, R.; Hagemann, G.B.; Herskind, B. (eds.). Amsterdam, Netherlands; Elsevier Science Publishers B.V. (1985).

From Proceedings of the Niels Bohr centennial conference; Copenhagen, Denmark (20-24 May 1985).

The (π/sup +/-/, π^0) reactions as probes of isovector resonances are discussed. Experimental observation of the isovector monopole resonance is reported. Experimental results are presented for L=0, 1, and 2 isovector resonances and are compared to random-phase approximation calculations.

6516 Nuclear Properties And Reactions, A=59-89, Experimental

12713 (INIS-SU—365, pp 15-21) **Inelastic collisions of neon-22 nuclei with nuclei in photoemulsion at 90 GeV/c momentum.** Vokalova, A.; Krasnov, S.A.; Tolstov, K.D. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780050. (N—12-85).

In JINR rapid commutations. Collection.

The experimental data obtained according to the analysis of 4303 inelastic interactions of the relativistic neon-22 nuclei with the nuclei in photoemulsion are presented. The multiplicities and angular distributions are shown as the functions of the disintegration degree of the colliding nuclei. It is shown that the same number of interacting nucleons of the projectile neon and carbon nuclei are connected with the different impact parameters with the target nucleus. 1 ref.; 7 figs.; 1 tab.

12714 **Q-value determination for the /sup 80/Kr(d,p)/sup 81/Kr reaction.** Burks, B.L.; Varner, R.L.; Ludwig, E.J. (Physics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* **34**: No. 6, 2316-2318(Dec 1986). Contract AS05-76ER02408;AC05-84OR21400.

The ground-state Q value for the /sup 80/Kr(d,p)/sup 81/Kr reaction has been determined by extrapolating to 0.0 MeV excitation the Q values measured for nine excited states in /sup 81/Kr. (The ground state is not observed.) Peaks from the /sup 28/Si(d,p)/sup 29/Si reaction served as energy calibration points. A ground-state Q value of 5646 +- 4 keV was found for the /sup 80/Kr(d,p)/sup 81/Kr reaction. A ground-state mass excess for /sup 80/Kr of -77 898 +- 7 keV was deduced using recent /sup 81/Kr ground-state mass measurements and the /sup 80/Kr(d,p)/sup 81/Kr Q value from the present work.

12715 **Half-life of ^{60}Fe.** Kutschera, W.; Billquist, P.J.; Frekers, D.; Henning, W.; Jensen, K.J.; Xiuzeng, M.A.; Pardo, R.; Paul, M.; Rehm, K.E.; Smither, R.K.; Yntema, J.L. (Argonne National Lab., IL). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **B5**: 430-435(1984). Contract W-31-109-ENG-38.

The half-life of ^{60}Fe has been measured to be T/sub 1/2/ = (1.49 +/- 0.27) x 10^6 a, significantly longer than the one previous measurement of Roy and Kohman which reported a value of 3 x 10^5 a uncertain by a factor of 3. The present value was obtained from measurements of specific activity and radioisotope concentration in a material produced by spallation of copper with 191 MeV protons. ^{60}Fe/Fe ratios in the range of 10^{-8} were measured with the Argonne FN tandem-superconducting linear accelerator system in conjunction with an Enge split-pole spectrograph. The specific activity of ^{60}Fe in Fe was measured through the grow-in of the 1.332 MeV gamma-ray line of the ^{60}Co daughter activity. 14 references, 5 figures, 1 table.

12718 **(JINR—E-1-85-231) Experimental investigations of the particle production process at the stage before the decay of resonances.** Strugalski, Z. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700400.

Process of particle production in its initial stage of development was studied with the help of target nucleus applied as a precision indicator of this process properties - within the time range less than 10sup(-22) s and within the space regions less than 10sup(-12) sm. In collisions of hadrons with nucleous, in particular in collisions of nucleons with nucleons,particle production occurs through intermediate objects in two-particle endoenergic reactions of the $2 \rightarrow 2$ type. The intermediate objects decay into usually observed resonances and particles. 60 refs.; 5 figs.

12719 **(JINR—E-3-85-226) Differential elastic scattering cross sections of cadmium isotopes and p-neutron strength functions in the range $50 < A < 130$.** Popov, A.B.; Samosvat, G.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1985. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700401.

Submitted to the International conference on Nuclear Data for Basic and Applied Scince (Santa Fe, May 13 - 17, 1985).

The measurements are being carried out on the IBR-30 pulsed reactor of angle distributions of neutrons with energies up to 400 keV elastically scattered by the nuclei in the 3p-maximum of neutron strength function. The experimental data on cross section parameters were obtained for the sup(106)Cd, sup(108)Cd, sup(110)Cd, sup(112)Cd and sup(116)Cd nuclei. The strength functions and potential scattering parameters S^0, Ssub(1/2)sup(1), Ssub(3/2)sup(1), Rsub(0)sup(infinity) and Rsub(1)sup(infinity) were determined. The paper also includes data on Ssub(1/2)sup(1) and Ssub(3/2)sup(1) obtained for other nuclei in the range $50 < A < 130$. The spin-orbital splitting in p-neutton strength functions is demonstrated. 5 refs.

12720 **(JINR—R-1-85-590) Study on 7.3 GeV deuteron interaction with the ^{93}Nb, ^{159}Tb, ^{202}Pb, sup(207,2)Pb and ^{209}Bi nuclei.** Buttsev, V.S.; Buttseva, G.L.; Kostin, V.Ya.; Migalenya, V.Ya. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy; AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1985. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700402.

Submitted to the journal Yad. Fiz. .

The results of investigation of 7.3 GeV deuteron interactions with niobium, terbium, lead and bismuth nuclei are presented. The production cross sections of residual nuclei in a wide mass number range of $24 <= A <= 92$ for sup(93)Nb target, $24 <= A <= 157$ for sup(159)Tb target, $24 <= A <= 206$ for sup(202, 207)Pb target and $24 <= A <= 206$ for ^{209}Bi target respectively have been determined for *g-ray yield of producted nuclides. For the ^{86}Y, ^{87}Y, ^{93}Tc, ^{94}Tc, ^{104}Ce and ^{196}Tl isotopes the isomeric ratios (^{9} sub(m)/^{9} sub(g)) have been determined. They are compared with those measured in reactions induced by protons, *a-particles and ^{12}C ions. 20 refs.; 3 figs.; 7 tabs.

12721 **(JINR—R-3-85-451) Study on the ^{149}Sm(n,γα) reaction on thermal neutrons and estimation of radiative strength functions of primary soft γ-transitions.** Vacik, J.; Gnatovic, V.; Kvitek, J.; Cervena, J.; Jahoda, L.; Vtyurin, V.A.; Popov, Yu.P.; Phuang Van Duan. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics; Ceskoslovenska Akademie Ved, Rez. Ustav Jaderne Fyziky). 1985. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700403.

The $^{149}Sm(n, \alpha)^{146}Nd$ and $^{149}Sm(n, \gamma\alpha)^{146}Nd$ reactions on thermal neutrons have been measured. The cross sections of seven partial α-transitions to the ground and excited states of ^{146}Nd daughter nucleus have been obtained. The cross section of the (n, $\alpha\alpha$) reaction turned out to be equal to (3.5 +- 0.7) x 10^{-3} b. The radiation strength functions of the primary soft γ-transitions are estimated under assumption of pure M1-transitions Ssup(cc) (M1) < 2.5 x 10^{-8} [MeV^{-3}] and of pure E1 transitions Ssup(cc)(E1) < 4 x 10^{-8} MeV. The Ssup(cc)(E1) estimate is compared using the known models for the giant dipole resonance with the photonuclear data extrapolation. The known models are shown to be not in contradiction with the obtained data. 15 refs.; 2figs.; 4 tabs.

12722 **(UCRL—95092) Example of a U(5) nucleus.** Aprahamian, A. (Lawrence Livermore National Lab., CA (USA)). Sep 1986. Contract W-7405-ENG-48. 6p. (CONF-8606130—12). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002160.

From International conference on nuclear structure, reactions, and symmetries; Dubrovnik, Yugoslavia (5 Jun 1986).

Evidence is shown for the observation of five-closely spaced states in ^{110}Cd with a centroid at 1989 keV which may represent the first identification of all five members of the three-phonon quintuplet. 11 refs., 2 figs.

12723 **Fission following fusion of Ni+Sn.** Lesko, K.T.; Henning, W.; Rehm, K.E.; Rosner, G.; Schiffer, J.P.; Stephans, G.S.F.; Zeidman, B.; Freeman, W.S. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] C: Nuclear Physics;* **34**: No. 6, 2155-2164(Dec 1986). Contract W-31-109-ENG-38.

Excitation functions for fission were measured for /sup 58,64/Ni beams incident on the even /sup 112//sup —//sup 124/ Sn targets at energies extending from well below to about 1.5 times the Coulomb barrier. Fission was identified by kinematic coincidence between fission fragments. Angle integrated fission cross sections were obtained from angular distributions taken at several energies for all systems. From these and the previously measured cross sections for evaporation residues, we obtain the total fusion cross sections and fission probabilities over the energy range 150 approx. <E/sub c.m./approx. <240 MeV. The competition between particle evaporation and fission in the compound nuclei is compared to statistical model calculations. A good description of the data for all 14 systems is achieved with the use of a single set of parameters. The model includes fission barriers with finite range and nuclear diffuseness effects, and partial-wave distributions for fusion that are qualitatively consistent with those from microscopic reaction model calculations. The fusion excitation functions are analyzed in terms of the dynamical fusion model of Swiatecki et al. Within this model we extract new values for the "extra-push" parameters.

12724 **Level structure of /sup 148/Ba: A test of the N/sub p/N/sub n/ scheme far off stability.** Hill, J.C.; Wohn, F.K.; Leininger, K.; Winger, J.A.; Nieland, M.E.; Gill, R.L.; Piotrowski, A.; Petry, R.F.; Goulden, J.D. (Ames Laboratory, Iowa State University, Ames, Iowa 50011). *Physical Review [Section] C: Nuclear Physics;* **34**: No. 6, 2312-2315(Dec 1986). Contract W-7405-ENG-82;AC02-76CH00016.

The deformed nucleus /sup 148/Ba (populated in /sup 148/Cs decay) is the heaviest Z = 56 and the lightest N = 92 nucleus known; thus its levels are extrapolations of both Z and N systematics. Values for $E(2_1^+)$, $E(4_1^+)/E(2_1^+)$, and $E(2_2^+)$ are in excellent agreement with interpolative predictions from systematics of the valence-nucleon product N/sub p/N/sub n/.

12725 **Absolute measurements of the /sup 115/In(n,γ)/sup 116m1/In cross section for fast neutrons.** Grady, D.J.; Knoll, G.F.; Robertson, J.C. (Univ. of Michigan, Dept. of Nuclear Engineering, Ann Arbor, MI). *Nuclear Science and Engineering;* **94**: No. 3, 227-232(Nov 1986).

The neutron capture cross section in /sup 115/In leading to the 54.12 min isomeric state (m/sub 1/) in /sup 116/In has been absolutely determined at neutron energies of 23,265, and 964 keV. These energies are the median neutron energies of the three photoneutron sources, Sb-Be, Na-D, and Na-Be, applied in this work. The measurements are independent of other cross-section data except for corrections amounting to <10%. Reaction rates were determined by beta counting of the /sup 116mI/In decay activity using a 4π gas flow proportional counter. Detector efficiency was measured using 4π beta-gamma coincidence counting techniques, incorporating the foil absorber method of efficiency extrapolation for correction of complex decay scheme effects. Photoneutron source emission rates were determined by indirect comparison with the U.S. National Bureau of Standards NBS-II standard source in the University of Michigan Manganese Bath. The normalized scalar flux was calculated from the neutron emission angular distribution results of a Monte Carlo computer program used to model neutron and gamma transport in the source. Correction factors were applied related to competing reactions, neutron scattering from experiment components, background from room-return neutrons, and differences in the energy spectra of the neutron sources. The absolute cross-section values obtained for the /sup 115/In(n,γ)/sup 116mI/In reaction were 588 +. 11, 196 +. 4, and 203 +. 4 mb at 23, 265, and 964 keV, respectively.

12726 **Angular-distribution neutron-emission spectra of niobium following bombardment by fast neutrons.** Guenther, P.T.; Smith, A.B. (Argonne National Lab., Argonne, IL). pp 955-958 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Neutron-emission spectra at ten angles between 20 and 160 degrees and incident neutron energies of 5.9, 7.1 and 8.4 MeV were measured relative to the neutron field emitted after spontaneous fission of /sup 252/Cf. The angular distribution of inelastically scattered neutrons appears to be essentially isotropic where it can be separated from the dominant elastic scattering peak. Above an excitation energy of 4 MeV the spectra are well described by a Maxwellian temperature distribution.

12727 **Nuclear data for production of /sup 117m/Sn for biomedical application.** Mausner, L.F.; Mirzadeh, S.; Ward, T.E. (Medical Dept., Brookhaven National Lab., Upton, NY). pp 733-737 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

The /sup 117m/Sn(4+)DTPA has been shown to have high uptake in cortical bone with negligible soft-tissue deposition. The long half-life (14 d) of /sup 117m/Sn and its emission of abundant short-range Auger and conversion electrons, make /sup 117m/Sn(4+)DTPA an attractive therapeutic agent for bone tumors. The necessary nuclear data for production of clinical quantities of /sup 117m/Sn using Sb(p,2pxn) reactions at BLIP was obtained. The excitation functions for /sup 121/Sb(p,2p3n) and /sup 123/Sb(p,2p5n) reactions in the regions of 43 ≦E/sub p/≦60 MeV were measured and compared with predicted values obtained from semi-empirical formulae. /sup 117m/Sn is routinely produced at ORNL by thermal neutron activation of /sup 116/Sn. The authors have investigated the possibility of improving the specific activity of the reactor-produced /sup 117m/Sn by irradiating enriched /sup 116/Sn and /sup 117/Sn in the core of the HFBR. The results indicate that, due to a strong absorption resonance at E/sub n/≅110 eV, better specific activity for reactor-produced /sup 117m/Sn can be obtained by irradiating natural tin in the core of a reactor.

12728 **Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr.** Salah, M.M.; Harvey, J.A.; Hill, N.W.; Hussein, A.Z.; Perey, F.G. (Oak Ridge National Lab., Oak Ridge, TN 37831). pp 593-596 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

High-resolution transmission measurements of zirconium metal samples have been carried out at ORELA using the 80-m flight path and an improved /sup 6/Li-glass scintillation neutron detector. Four different thicknesses of the pure zirconium metal and one sample of zircalloy were used in four separate experiments. The transmission data for these samples were measured at room temperature, and one sample was cooled to liquid nitrogen temperature. These data were analyzed using the multilevel R-matrix computer code SAMMY.

12729 **Deformation in odd-mass nuclei near A ~100: one- and three-quasiparticle Nilsson states in $_{39}{}^{99}Y_{60}$.** Meyer, R.A.; Monnand, E.; Pinston, J.A.; Schussler, F.; Ragnarsson, I.; Pfeiffer, B.; Lawin, H.; Lhersonneau, G.; Seo, T.; Sistemich, K. (Kernforschungsanlage Juelich, West Germany). *Nuclear Physics* [*Section*] *A;* **A439**: 510-534(1985).

The deexcitation of the 8.6 μs isomer of $_{39}{}^{99}Y$ has been studied using γ-ray spectroscopy techniques at LOHENGRIN and JOSEF. The resultant level scheme is analyzed within the framework of the particle-rotor coupling model. The ground-state band, to spin 19+/2, is found to have band properties consistent with a π[422 5/2] Nilsson assignment. The 8.6 μs isomer and a side band with a band-head half-life of 1.4 ns are found to have J/sup π/ values of 17+/2 and 11+/2, respectively. Their properties are consistent with a {π[422 5/2] nu[411 3/2]nu[404 9/2]} assignment. Some evidence is given for the dominance of the nu nu interaction over the πnu interaction in these three-quasiparticle partners. 29 references, 14 figures, 4 tables.

(In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700404.

Submitted to the journal Sov. Radioch. .

The products of heavy ion reactions induced by bombarding ^{154}Gd with 149 MeV and 160 MeV ^{20}Ne ions were chemically separated by cation exchange and investigated by γ-spectrometry. In the W-fraction the new isotopes ^{169}W and ^{169}W were identified. Their half-lives have been found to be 49 +- 7 s and 55 +- 10 s, respectively. The most intensive γ-lines have been assigned to these isotopes. 8 refs.; 5 figs.; 1 tab.

12733 **(LAFI—071) Sup(153,155)Eu level structure according to the deformed nuclei models.** Guseva, T.V.; Tambergs, J.J.; Bondarenko, V.A. (AN Latvijskoj SSR, Riga. Inst. Fiziki). 1984. 44p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700405.

The energy level structure of transitional deformation region odd nuclei of sup(153, 155)Eu has been studies in terms of several nuclear models. The energy-level and γ-transition probability calculation according to the nonadiabatic rotational model, as well as the cranking shell model analysis indicate the strong collectivisation of low-lying states. The results of sub (153, 155)Eu energy-level structure calculations on the basis of single-qasiparticle-rotation-vibration model are presented. 22 refs.; 11 tabs.

12734 **Search for the beta decay of /sup 180/Lu to /sup 180/Hf/sup m/.** Kellogg, S.E.; Norman, E.B. (Nuclear Physics Laboratory, University of Washington, Seattle, Washington 98195). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2248-2255(Dec 1986). Contract AC06-81ER40048;AC03-76SF00098.

The t/sub 1/2/ = 5.7 min /sup 180/Lu isotope was produced in the /sup 180/Hf(n,p) reaction and its subsequent β decay back to /sup 180/Hf was studied with a Ge(Li) spectrometer. A radiochemical technique was used to measure the fractional population of the I/sup π/, K = (8⁻,8) isomer in /sup 180/Hf to be f/sub m/ = 0.005 +- 0.018X The limit on f/sub m/ is shown to be too small to account for the nucleosynthesis of /sup 180/Ta/sup m/ in the r process. The possible existence of a high-spin isomer in /sup 180/Lu and its astrophysical consequences are discussed.

12735 **Isomeric levels in /sup 180/Lu and the nucleosynthesis of /sup 180/Ta/sup m/.** Lesko, K.T.; Norman, E.B.; Moltz, D.M.; Larimer, R.M.; Crane, S.G.; Kellogg, S.E. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2256-2260(Dec 1986). Contract AC03-76SF00098;AC06-81ER40048.

Searches have been made for short-lived isomers in /sup 180/Lu suggested by the preceding paper. Samples of /sup 180/Lu were produced via the /sup 180/Hf(n,p) reaction. Evidence for decay of a /sup 180/Lu isomer was sought by examining the decay curves of the known /sup 180/Lu and /sup 180/Hf/sup m/ delayed γ rays, and by searching for previously unidentified delayed γ rays. No evidence for a /sup 180/Lu isomer was observed for half-lives between 10 and 300 sec. The relevance of these observations for understanding the nucleosynthesis of /sup 180/Ta/sup m/ is discussed.

12736 **Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U.** Tubbs, L.E.; Birkelund, J.R.; Huizenga, J.R.; Hilscher, D.; Jahnke, U.; Rossner, H.; Gebauer, B. (Univ. of Rochester, NY). *Physical Review* [*Section*] *C: Nuclear Physics;* **32**: No. 1, 214-221(Jul 1985). Contract AC02-76ER03496.

Angular correlations of fragments both in and out of the reaction plane from 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U have been measured. The correlated data have been evaluated in terms of a full linear momentum transfer component and less than full linear momentum components. The method of evaluation has also been applied to other available data for ^{16}O- and ^{20}Ne-induced reactions. The maximum angular momentum l/sub FLMT/ associated with full linear momentum transfer for the systems analyzed agrees with the predictions of a classical dynamical model based on the proximity nuclear potential and one-body nuclear friction. Because of projectile breakup, the angular momentum distribution in the composite nucleus is markedly distorted from the (2l + 1) distribution expected for full linear momentum transfer.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Neutron yields from proton bombardment of elemental Pb and depleted U have been measured at bombarding energies of 318 and 800 MeV. Additionally, at 800 MeV, data were obtained for Al and C. The data were obtained at angles/flight-paths of 7.5deg/30m and 30deg/40m and were collected in two parameter histograms of time-of-flight and pulse-height in order to select detector biases in the analysis and to permit comparison of calculated and experimental pulse height spectra in the calculation of detector efficiency. The data have been reduced to absolute double-differential cross sections and are in good agreement with INC calculations at 800 MeV, but exceed calculation by a factor of three at the lower energy.

In JINR rapid commutations. Collection.

The experiments describe an emission of heavy clusters from excited ^{234}Pa and ^{236}U nuclei, which are produced in bombarding ^{232}Th targets by deuterons and α particles with 17 and 35 MeV energies, respectively. It is shown that the nuclide with mass A=24 emitted with approximately 2 microbarn cross section and the nuclide with mass A=28 were not observed and the cross section was estimated to be lower than 0.1 microbarn. For its heavy fragments the upper level of cross section is obtained from 3 x 10sup(-2) to 3 x 10sup(-4) microbarn. The results of experiments are interpreted as ternary fission with the emission of heavy cluster A=24, while the limit for probability of extreme asymmetric binary fission GITAsub(clus.)/GITAsub(tot.) <= 3 x 10sup(-10) was determined. 11 refs.; 1 tab.; 1 fig.

12744 (INIS-SU—392, pp 140) **Estimation of half-life values of actinide radionuclides.** Chechev, V.P. 1986. (In Russian). NTIS (US Sales Only), PC A99/MF A01. File Number DE87780053. (CONF-8604278—Summs.).

12747 (INIS-SU—392, pp 143) **Measurement of absolute intensity of 74.67 keV gamma radiation from the sup(243)Am decay.** Amatuni, E.N.; Gejdel'man, A.M.; Egorov, Yu.S.; Krylov, E.G.; Chereshkevich, Yu.L. 1986. (In Russian). NTIS (US Sales Only), PC A99/MF A01. File Number DE87780053. (CONF-8604278—Summs.).

From 36. conference on nuclear spectroscopy and nuclear structure; Khar'kov, USSR (15 Apr 1986).

12748 **Search for correlated narrow-peak structure in the two-photon spectrum from 6-MeV/nucleon U+Th collisions.** Meyerhof, W.E.; Molitoris, J.D.; Danzmann, K.; Spooner, D.W.; Stephens, F.S.; Diamond, R.M.; Beck, E.; Schaefer, A.; Mueller, B. (Department of Physics, Stanford University, Stanford, California 94305). *Physical Review Letters;* **57**: No. 17, 2139-2142(27 Oct 1986).

We have searched for 180° (c.m.) correlated equal-energy two-photon decays produced in 6-MeV/nucleon U+Th collisions. In the summed-energy region between 1.5 and 1.8 MeV, we set an upper limit of 3 x 10/sup -10/ decays per projectile for the yield integrated over a target thickness of 3.6 mg/cm², which corresponds to a cross section of 3 x 10/sup -29/ cm² averaged over the target. This can be compared to a production cross section of (1-2) x 10/sup -28/ cm², averaged over a target thickness of 0.3—0.6 mg/cm² found by others for correlated electron-positron pairs in the same reaction.

12749 **Neutron total cross section of /sup 240/Pu below 6 eV and the parameters of the 1.056-eV resonance.** Spencer, R.R.; Harvey, J.A.; Hill, N.W.; Weston, L.W. (Oak Ridge National Lab., Oak Ridge, TN). pp 581-584 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Measurements of the low-energy neutron transmission of five different /sup 240/Pu samples have been made using the Oak Ridge Electron Linear Accelerator (ORELA) pulsed-neutron source and the time-of-flight technique in an attempt to resolve discrepancies between the evaluated low-energy cross section of this nuclide and the observed production of heavier Pu isotopes in light-water reactors (LWRs). Three "thin" samples consisting of Pu metal foils containing 0.726 at % /sup 240/Pu were measured above 0.4 eV in order to derive the parameters of the 1.056-eV resonance, which is

responsible for most of the observed 2200-m/s total cross section. Two "thick" samples of 99.97 at % /sup 240/Pu metal were measured from 0.003 eV to about 6 eV to obtain the 2200-m/s cross section and the cross-section shape in the low-energy region. A consistent set of resonance parameters was derived from the above data sets.

12750 **Fission channel analysis for /sup 232/Th(n,f).** Becker, J.A.; Bauer, R.W. (Lawrence Livermore National Lab., Livermore, CA 94550). pp 349-352 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Angular distributions of fission fragments produced in the / sup 232/Th(n,f) reaction have been measured in 40-keV intervals. A simplified reaction model was adopted, and a channel analysis done for 0.72 ≦ E/sub n/ (MeV) ≦ 4.5 MeV. An anomaly at E/sub n/ = 2.98 MeV suggests that K remains a good quantum number some 2 MeV above the fission threshold. The percentage contribution to the cross section of K = 3/2 states for incident neutron energies between 1.1 and 1.3 MeV is larger than previously thought.

12751 **(AD-A—172675/1/XAB) Coherent scattering of light by nuclear spins. Final report.** Weber, J. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). 1 Jun 1986. 44p. NTIS, PC A03/MF A01.

A new kind of coherent interaction is possible for strongly coupled scatterers. The general theory is presented and applied to the coherent absorption of light by an ensemble of coupled nuclei, with polarized spins. Three kinds of experiments have been carried out, in which the coupling of scatterers with each other is important. These are: a) low energy antineutrinos interacting with nuclei of a solid; b) Raman scattering of light by electrons in a thin conducting film on the surface of polarized dielectric; and c) interaction of light with polarized nuclei of a crystal. For a) the theory is the interaction of two current densities and the lowest-order process is antineutrino scattering, b) is a scattering process described by the interaction of light with electrons, and c) is an absorption process described by the interaction of light with magnetic moments. All of these processes may have total cross sections orders greater than the corresponding ones for scatterers that are not tightly bound. This appears true for all tightly bound scatterer interactions.

12752 **(BNL—38864) Dynamical symmetries in nuclear structure.** Casten, R.F. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 28p. (CONF-8610110—2). NTIS, PC A03/MF A01; GPO Dep. File Number DE87003236.

From 15. international colloquium on group theoretical methods in physics; Philadelphia, PA, USA (20 Oct 1986).

In recent years the concept of dynamical symmetries in nuclei has witnessed a renaissance of interest and activity. Much of this work has been developed in the context of the Interacting Boson Approximation (or IBA) model. The appearance and properties of dynamical symmetries in nuclei will be reviewed, with emphasis on their characteristic signatures and on the role of the proton-neutron interaction in their formation, systematics and evolution. 36 refs., 20 figs.

12753 (CONF-860270—, pp 139-143) **Percolation description of nuclear fragmentation.** Bauer, W.; Mosel, U.; Post, U. (Michigan State Univ., East Lansing). Apr 1986. NTIS, PC A08/MF A01. File Number DE86009123.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

The authors have introduced a statistical model of high-energy proton-induced fragmentation reactions based on bond-percolation theory. Using only a few conservation laws (charge, baryon number, total momentum and energy) and an extremely simplified two-body short-range interaction, it can reproduce a surprising amount of experimental data. Based on the results of the authors calculations they conclude: multifragmentation of the target in high-energy proton-induced collisions is a volume and not surface dominated phenomenon. The decay of the spectator matter is happening simultaneously rather than sequentially. The data assembled so far are not a unique signature of a liquid-gas phase transition of nuclear matter.

12754 (CONF-860270—, pp 155-158) **Baryon recoil and the fragmentation regions in ultra-relativistic nuclear collisions.** Csernai, L.P.; Gyulassy, M. (Lawrence Berkeley Lab., CA). Apr 1986. NTIS, PC A08/MF A01. File Number DE86009123.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

The purpose of this paper is to reinvestigate the description of the fragmentation regions of ultrarelativistic nuclear collisions. Also, the authors update the estimates of energy density reached by incorporating recent nuclear stopping power results. They find that most of the discrepancy between kinetic and hydrodynamic estimates resulted from the lack of exact baryon conservation in the hydrodynamic formulation. They formulate a new hydrodynamic model preserving the continuity equation in a way that nevertheless allows them to incorporate large baryon recoil observed empirically. This model leads to significantly higher energy densities than even the earliest estimates suggested. Therefore, the prospects for studying high baryon density plasmas look better than ever.

12755 (CONF-860270—, pp 159-162) **Dilepton emission and the QCD phase transition in ultrarelativistic nuclear collisions.** Kajantie, K.; Kapusta, J.; McLerran, L.; Mekjian, A. (Univ. of Helsinki, Finland). Apr 1986. NTIS, PC A08/MF A01. File Number DE86009123.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

A proposed signal for the formation of quark-gluon plasma is the emission of lepton pairs via quark-antiquark annihilation in the plasma. Since the produced leptons do not interact strongly with the quark-gluon plasma or with the final hadronized matter they will escape from the system to provide information on the early high temperature epoch of the nucleus-nucleus collision. Since the authors are here only interested in the central rapidity region they shall use Bjorken's longitudinal hydrodynamic model for the space-time evolution of the produced matter to compute some properties of dilepton emission.

12756 **(DOE/ER/05126—302) Relation of non-relativistic methods to nuclear physics.** Redish, E.F. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). 24 Aug 1986. Contract AS05-76ER05126. 8p. (ORO—5126-302; CONF-860832—9). NTIS, PC A02. File Number DE87002267.

From 11. international conference on few-body systems in particle and nuclear physics; Tokyo, Japan (24 Aug 1986).

The non-relativistic nucleon-only (NRNO) formalism considers nuclear systems to be composed of nucleons described by two-component spinors and dynamics described by a hamiltonian consisting of non-relativistic kinetic energies plus two-body energy-independent potentials. This formalism is considered as a traditional framework for studying nuclear systems. In light of the development of alternative frameworks and the process of reconsidering the fundamental degrees of freedom needed to study nuclei, the author seeks to more clearly define the NRNO formalism and proposes guidelines for some calculations relevant to the debate between the NRNO formalism and other frameworks for nuclear physics research. 12 refs., 2 figs.

12757 **(DOE/ER/10353—8) Computational methods for the nuclear and neutron matter problem: Progress report [for the period 1 February 1986-31 January 1987].** Kalos, M.H.; Carlson, J.; Schmidt, K. (New York Univ., NY (USA). Courant Inst. of Mathematical Sciences). Nov 1986. Contract AC02-79ER10353. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003576.

Ongoing research in several areas is summarized. A brief description is made of microscopic calculations of low energy alpha-neutron scattering. This is the smallest system where the L-S splitting may be easily calculated. In order to test variational wavefunctions, the possibility of treating systems of light nuclei with the correlated basis function method has been investigated. A study of the ground state properties of ^{3}He has continued. Finally, the properties of the alpha particle and triton have been calculated with the Green's function Monte Carlo method. 1 ref., 2 figs., 3 tabs. (DWL)

12758 **(DOE/ER/40048—05-N7) Some open questions in nuclear physics.** Henley, E.M. (Washington Univ., Seattle (USA). Dept. of Physics). Oct 1986. Contract AC06-81ER40048. 13p. (CONF-8610183—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003134.

From LAMPF users group meeting; Los Alamos, NM, USA (1 Oct 1986).

A review of recent work in nuclear physics is presented. The paper gives a broad discussion of research goals in nuclear structure, quark-gluon degrees of freedom, quark-gluon plasma, symmetries, and rare decays. (DWL)

12759 **(DOE/ER/40048—31-N6) Nuclear physics issues in double beta decay.** Haxton, W.C. (Washington Univ., Seattle (USA)). 1986. Contract AC06-81ER40048. 13p. (CONF-8606205—3; CONF-860575—61). NTIS, PC A02/MF A01; GPO Dep. File Number DE87000514.

From International symposium on nuclear beta decay and neutrinos; Osaka, Japan (11 Jun 1986).

A number of issues in double beta decay are discussed: shell model estimates of 2nu matrix elements, a sum rule for the double Gamow-Teller operator, a comparison of shell model and quasiparticle RPA results, Pontecorvo's Te ratio argument, neutrinoless $\beta\beta$ decay mediated by heavy neutrinos, and the structure of O^+ states in Ge isotopes. 24 refs., 3 figs.

12760 **(DOE/ER/40114—T3) Precise tests for the unitarized pion photoproduction impulse amplitude in exclusive nuclear reactions.** Wittman, R. (Rensselaer Polytechnic Inst., Troy, NY (USA)). Jul 1986. Contract AC02-83ER40114. 124p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87003924.

An impulse amplitude for pion photoproduction, suitable for the nuclear problem, is constructed with improved background dynamics and unitarity. The superior features of the amplitude are demonstrated at energies between threshold (E/sub γ/ = 150 MeV) and the Δ(1232) resonance energy (E/sub γ/ = 320 MeV) by discussing their effects on partial cross sections relevant to exclusive transitions in the 1p-shell. The specific reactions of $^{13}C(\gamma,\pi^-)^{13}N$/sub g.s./ and $^{14}N(\gamma,\pi^+)^{14}C$/sub g.s./ are discussed in light of these more general partial cross sections. The nuclear structure of the A = 14 system helps to enhance the effects considered. At or near resonance, very sizable (20 to 30%) effects arise both from the unitarity and from the refined treatment of the pionic final state interaction generated in the Δ-hole approach. Other examples of charged pion photoproduction reactions for 1p-shell nuclei are discussed briefly. Future theoretical improvements and experimental possibilities are suggested. 61 refs., 58 figs.

12761 **(DOE/ER/40145—T2) Theoretical nuclear physics group: Progress in research, November 1, 1985-October 31, 1986.** (Texas Univ., Austin (USA). Dept. of Physics). Nov 1986. Contract FG05-84ER40145. 60p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87003333.

Theoretical investigations include reactions induced by light ions, reactions induced by heavy ions, and nuclear collective motions interpreted by the Boson Expansion Theory. This report consists of short synopses of specific research projects including discussions of theoretical calculations. 96 refs., 12 figs.

12762 **(DOE/ER/40199—T1) Nuclear reaction studies: Progress report.** Thaler, R.M. (Case Western Reserve Univ., Cleveland, OH (USA). Dept. of Physics). 19 Nov 1986. Contract AC02-85ER40199. 4p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003571.

A principal focus of recent research has been the three-body problem. A great deal of effort has been devoted to the creation of a computer program to calculate physical observables in the three body problem below 1 GeV. Successful results have been obtained for the triton. Additional work concerns scattering of K^+ mesons from nuclei, antinucleon physics, relativistic nuclear physics and inclusive reactions. (DWL)

12763 **(IAE—3878/2) On the data reliability of light nuclei description on the basis of realistic NN interactions.** Ehfros, V.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700380.

Examination of some attempts to solve the problem of nuclei of s- and p-shells on the basis of realistic NN-interactions is conducted. The degree of reliability of data on global nucleus characteritics obtained in this case is analyzed. The problem of accuracy of binding energy light nucleus (for example, ^{3}H, ^{4}He) fixation by D-wave weight in the deuteron in case of realistic NN-interactions is discussed. 23 refs.; 3 figs.; 5 tabs.

12764 **(INIS-BR—541) Giant resonance of electrical multipole from droplet model.** Tauhata, L. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1984. 152p. (In Portuguese). NTIS (US Sales Only), PC A08/MF A01. File Number DE87700381.

The formalism of the electrical multipole resonance developed from the Droplet nuclear model is presented. It combines the approaches of Goldhaber-Teller (GT) and Steinwedel-Jensen (SJ) and it shows the relative contribution of Coulomb, superficial and neutron excess energies. It also discusses the calculation of half-width. The model evaluates correctly the resonance energies as a function of nuclear mass and allows, through the Mixture Index, the prediction of the complementary participation of modes SJ and GT in the giant nuclear resonance. Values of the mixture index, for each multipolarity, reproduce well the form factors obtained from experiments of charged particle inelastic scattering. The formalism presented for the calculation of the half-width gives a macroscopic description of the friction mechanism. The establishment of the macroscopic structure of the Dissipation Function is used as a reference in the comparison of microscopic calculations.

12806 **(ITEP—88-1985) Effect of nuclear spin-orbit interaction in light Σ-atoms.** Bogdanova, L.N.; Kudryavtsev, A.E.; Markushin, V.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki; AN SSSR, Moscow. Fizicheskij Inst.). 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700382.

It is shown that nuclear widths and shifts of light Σ-atoms levels can essentially differ for hyperfine structure states j=1 +- 1/2. This effect is due to the influence of a spin-orbit interaction on the position of near-threshold one-particle levels of a Σ-hyperon in a nucleus. 27 refs.; 3 figs.; 1 tab.

12807 **(ITF—85-75-R) Study on the mechanism of low-energy neutron interaction with heavy nuclei.** Ezhov, S.N.; Kabakova, N.E.; Plyujko, V.A. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700386.

The improved calculation method of a fluctuation component of an average cross section both with and without allowance for inelastic direct transitions is formulated. The relations between the exact and approximated approaches to the calculation of fluctuation cross sections are considered. It is shown that for the determination of the role of various mechanisms of inelastic neutron interaction within the energy range 0.5-2 MeV one can use the data either on inelastic scattering cross section or on angular distributions. 37 refs.; 7 figs.

12808 **(ITF—85-76-R) Nuclear three-body problem and energy-dependent potentials.** Abdurakhmanov, A.; Akhmadkhodzhaev, B.; Zubarev, A.L.; Irgaziev, B.F. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700387.

Energy-dependent potentials in the three-body problem are being considered. Three-particle equations for the case of pairing energy-dependent potentials are generalized and the problems related to this ambiguous generalization are investigated. In terms of the equations obtained the tritium binding energy and vertex coupling constants (Tdn) and (Tdν) are evaluated. The binding energy and, especially, coupling constants are shown to be sensitive to a shape of the energy-dependent potential. 13 refs.; 2 tabs.

12809 **(ITF—85-86-R) Nucleon mass equality effect in the elastic pd-scattering at intermediate energies.** Kuzmichev, V.E.; Peresypkin, V.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700388.

The high-energy elastic scattering in the three-particle system at an arbitrary mass relation is considered on the basis of the cluster expansion method. It is found that the accounting of the nucleon mass equality increases the differential cross section of pd-scattering in the region of the second diffraction maximum by 1.5 times and decreases the total cross section by 2%. 13 refs.; 2 figs.

12810 **(ITF—85-92-R) Elastic pα scattering at high energies.** Enkovskij, L.L.; Polozov, A.D.; Struminskij, B.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700389.

Differential and total cross sections of high-energy pα scattering are calculated within the framework of Glauber-Sitenko formalism. The dipole pomeron model is used as the amplitude of NN-scattering. The comparison of the obtained results with experimental data is made. 10 refs.; 3 figs.; 1 tab.

12811 **(ITF—85-125-R) Pauli principle effect on the behaviour of neutron-deuteron scattering near three-particle threshold.** Takibaev, N.Zh.; Kharchevnikov, P.B. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700384.

The threshold behaviour of the nd-decay reaction is found to be essentially dependent on the value of a total spin in a neutron-deuteron systems: the channel with S=3/2 turns to be suppressed by Pauli principle relative to the channel with S=1/2. There is actually no effect produced by a specific form of NN-forces. 5 refs.; 1 fig.

12812 **(ITF—85-130-R) Relativistic deuteron fragmentation into proton and the deuteron structure at small distances.** Anchishkin, D.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700385.

The deviation of experimental data on the cross sections of deuteron fragmentation into protons on ^{12}C at different energies with the calculated ones on the known two-nucleon wave functions is analysed. The similarity of the deviations is interpreted as the manifestation of the deuteron nonnucleon degrees of freedom at small distances. It is shown that the hybrid model describes the experimental data on the cross section of the deuteron fragmentation on ^{12}C. The relativistic effects are taken into account in the framework of the light-cone dynamics. 13 refs.; 4 figs.

12813 **(ITP—85-18-E) Generalized hyperspheric function method and the pion scattering by nucleus of ^{18}O.** Gmitro, M.; Steshenko, A.I. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700390.

In the framework of the known multiple scattering theory the differential cross section of the $^{18}Q(PI, PI)$ reaction for the energies 29, 164, 180 and 230 MeV is calculated. The wave functions of the ground state and excited states of the nucleus ^{18}O are found in the minimum approach of generalized hyperspheric function method. The pion-nucleus t sub(PIA) matrix is constructed by solving the Lippman-Schwinger equation on-energy-shell and taken into account the phases of PIN - scattering. Theoretical values of oifferential cross section of the (PI^{+-} - ^{18}O)-reaction under consideration adequately describe experimental data. 24 refs.; 5 figs.; 2 tabs.

12814 **(ITP—85-19-E) Phenomenological Hamiltonian of Sp(2,R) model for heavy deformed nuclei.** Avramenko, V.I.; Asherova, R.M.; Filippov, G.F.; Smirnov, Yu.F.; Zajtsev, S.A. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700383.

In the frame of the symplectic collective model, operating with the microscopical basic functions of irraducible representation of SU(3) groups the energy spectrum of collective excitation in ^{164}Kr nucleus is calculated. Also the absolute and relative values of probabilities E2-transitions between collective states are obtained. The indexes of SU(3) symmetry are chosen in correspondence with rules of Nillsson orbital occupation. 20 refs.; 3 tabs.

12815 **(ITP—85-25-E) On the nature of resonances in photonuclear reactions.** Filippov, G.F.; Vasilevsky, V.S.; Kruchinin, S.P.; Chopovsky, L.L. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700391.

An investigation of continuous spectrum states of the ^{6}He, ^{6}Li, ^{7}Li and ^{7}Be light atomic nuclei is carried out within the microscopic approach taking into account the dynamics of cluster and quadrupole collective degrees of freedom. The interaction of these nuclei with electromagnetic radiation is shown to lead to the excitation of collective resonances with energy exceeding 20 MeV and width GITA<1 MeV, and also giant quadrupole resonances with parameters: E=12-15 MeV and GITA approximately 5 MeV. 48 refs.; 6 figs.

12816 (ITP—85-38-E) Faddeev approach in three-quark systems. Kuperin, Yu.A.; Kvintsinskij, A.A.; Merkur'ev, S.P.; Novozhilov, V.Yu. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700371.

Calculations of baryon static properties represent a noval field where the Faddeev differential equations are applied. The mass spectra and were functions of baryons from multiplets of spin-partity Jsup(P)=1/2$^+$, 3/2$^+$ are investigated in non-relativistic quark model. The structure parameters characterizing the "quality" of the baryon wave functions, i.e. charge radii, electromagnetic form factors quark distribution functions, are calculated. It is shown that the majority of the popular qq-potentials do not give "high quality" wave functions in spite of the good fit for the hadron masses. 29 refs.; 4 figs.; 3 tabs.

12817 (ITP—85-59-E) Studies of the three-nucleon system properties using the interpolating amplitude scattering function. Petrov, N.M.; Pushkash, A.M. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700392.

The three-nucleon motion problem is formulated and investigated using the interpolating function method. The pole functions corresponding to the bound state of the three-nucleon system and the low energy functions interpolating the nd-scattering length are calculated for a separable potential. 10 refs.; 5 figs.; 1 tab.

12818 (JINR—E-7-85-575) Two-stage model for fast particle emission in heavy-ion collisions. Biedermann, M.; Maedler, P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Technische Univ., Dresden (German Democratic Republic). Sektion Physik). 1985. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700393.

Submitted to the journal Z. Phys., A.

Using Bertsch's trajectory model two physically distinct approaches is applied to describe fast particle emission in heavy-ion collisions. In the early stage particle emission in the spirit of the Fermi-jet mechanism is calculated. In the later stage, after neck formation, particles are assumed to be emitted from a rapidly expanding hot zone of appreciably large initial dimension, which is strongly anisotropic in momentum space. Absolute double-differential cross sections for preequilibrium neutron emission and obtain a remarkable agreement with experimental data without introducing free parameters are calculated. 53 refs.; 13 figs.

12819 (JINR—R-1-85-315) Structure functions and quark distributions in nuclens and nuclei. Savin, I.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1985. 48p. (In Russian). (CONF-840757—40). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700396.

From 22. international conference on high energy physics; Leipzig, German D.R. (19 Jul 1984).

The data obtaned in the course of studying quark distribution in nucleons and nuclei are discussed. The results of measuring the R(x, Q^2) parameter which is determined through the relation of structure functions are considered. The experiments on studying nuclear effects in nucleon structure functions are analyzed. It is pointed out that the EMC effect, lepton-nucleus and hadron-nucleus interactions indicate the existence in nuclei of multiquark states. The data on structure functions determined from deep inelastic muon and neutrino scattering on nuclei are given. 59 refs.; 36 figs.; 4 tabs.

12820 (JINR—R-1-85-668) Analysis of experimental data on light nucleus production in relativistic αA-interactions within the generalized coalescence model. Gorshkova, N.L.; Denisenko, K.G.; Lozhkin, O.V.; Murin, Yu.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy; Radievyj Inst., Leningrad (USSR)). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700395.

Inclusive cross section of production isotopes from ^{1}H to ^{6}Li with kinetic energy 10-50 MeV/N in collisions of 3.33 GeV/N α particles with Ag and Au nuclei are analyzed. Variation of coalescence model is suggested to describe spectra in that energy range. In the model together with the usual parameter P_0 - the radius of coalescence sphere in momentum representation a new parameter Esub(c) is used. It characterizes Coulomb potential of the fragment source. To obtain spectra of nucleons from which fragments have been formed the experimnental ratio formed with the help of the found nucleon distributions give ^{6}He, sup(6, 7, 8)Li spectra. Comparison of the results with experimental data shows a good agreement. The parameters P_0 and Esub(c) have been found and the simplest interpretation is considered. For α-particle source the value of charge number Zsub(r)=30 and 1.4 normal nuclear density value have been obtained. 10 refs.; 5 figs.; 2 tabs.

12821 (KFTI—84-27) Effect of antisymmetry of final states on cross sections of the ^{4}He(γ,p)^{3}H and ^{4}He(γ,n)^{3}He reactions with polarized photons. Mel'nik, Yu.P.; Shebeko, A.V. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700394.

In the plane-wave pulse approximation cross sections and asymmetry in distributions of ^{7}He(γ, p)^{3}H and ^{4}He(γ, n)^{3}He reaction products with polarized photons of intermediate energies (Ksub(γ)=40-140 MeV) are calculated. In calculations along with the mechanism of direct knocking-out of nucleons the contribution of the so called recoil diagram caused by antisymmetry effects of final state wave functions is considered. It has been assumed that the ^{4}He, ^{6}He and ^{3}H wave functions are spatially-symmetric corresponding to S-wave states of nucleons of oscillator model while the electromagnetic transition operator comprises only convection current and magnetic interaction. It is shown that recoil mechanism results in appearance of asymmetry in neutron distributions compared by value with proton asymmetry. 25 refs.; 4 figs.

12822 Quark cluster model for nuclear matter through variational approach. Tosa, S. (Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2302-2311(Dec 1986).

As a model for nuclear matter based on quark clustering, we consider a system of fermions carrying color, interacting through a δ-function potential in one dimensional space. The dynamical properties of the system are studied by the variational method as a function of density. We develop a trial wave function for triplet (three-quark) clusters in analogy to the BCS wave function for pairs in the theory of superconductivity. We show that the system consists of a Fermi gas of color-neutral triplet clusters (nucleons) at low density and a Fermi gas of quarks in the limit of high density. The low density result agrees with the exact result derived by the method of the Bethe ansatz through second order in density.

12823 Gauge-invariant nuclear Compton amplitude manifesting low-energy theorems. Friar, J.L.; Fallieros, S. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2029-2042(Dec 1986).

The electromagnetic field representation of the nuclear electromagnetic interaction is developed, by extending previous work on the nuclear current (one-photon amplitude) to the nuclear Compton amplitude. The resulting form of the Compton amplitude is gauge invariant and, in transverse gauge, manifests the low-energy theorems for the $0^+ \rightarrow 0^+$ case, which is discussed in detail. Deuteron forward photodisintegration is also studied numerically, and it is shown that the generalized Siegert form of the retarded electric dipole interaction efficiently incorporates pion-exchange currents implicitly, while large explicit forms of these currents are needed in the standard representation of the interaction. Gauge invariance and Reiss's strong-field momentum-translation approximation are also discussed.

12824 Measurements and calculations of neutron scattering in the actinide region. Hansen, L.F.; Pohl, B.A.; Wong, C.; Haight, R.C.; Lagrange, C. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2075-2083(Dec 1986). Contract W-7405-ENG-48.

Neutron scattering differential cross sections were measured for /sup 232/Th, /sup 238/U, and /sup 239/Pu at 14.1 MeV. Optical model calculations were performed using the coupled-channel formalism for deformed nuclei as given by Tamura. Several microscopic and phenomenological optical model potentials were tested for these heavy nuclei: (i) a folding optical model potential using the microscopic nucleon-nucleon effective interaction of Jeukenne, Lejeune, and Mahaux with deformed nuclear density distributions (these calculations are addressed in the text as semimicroscopic optical model potentials), (ii) global phenomenological optical model potentials optimized for the actinide region, and (iii) neutron potentials derived from 35 MeV proton optical potentials using the Lane formalism. The total cross sections calculated from these optical model potentials at 14.1 MeV are also compared with measurements in the literature. The semimicroscopic calculations reproduce reasonably well the measured angular distributions with only two free parameters used to optimize fits to the data. The calculations carried out with optical potentials inferred from proton data give good agreement with the neutron data, an agreement which is similar to that between calculational results using neutron global potentials optimized for this mass region and the measured data.

12825 Reply to Comment on Comparison of approximate chiral-dynamical $\pi N \rightarrow \pi\pi N$ models used in A(π,2π) calculations. Liu, L.C. (Los Alamos National Laboratory, Los Alamos, New Mexico). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2351-2352(Dec 1986).

It is shown that in forward-angle pion-nucleus double charge exchange reactions leading to double analog states the contribution from the contact diagram of the virtual pion production does not vanish identically. Numerical effects of this diagram in various other double charge exchange reactions should, therefore, be examined case by case.

12826 Observations on rotating finite-range fission barriers derived from barriers for nonrotating nuclei. Blann, M. (Division, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **34**: No. 6, 2215-2216(Dec 1986). Contract W-7405-ENG-48.

Fission barriers calculated from the rotating liquid drop model with finite-range corrections based on scaling of the nonrotating finite-range model of Krappe et al. are compared with results explicitly calculated for rotating systems with the finite-range effect included. The scaling method is shown to give excellent agreement with the calculated barriers, confirming earlier conclusions on effective fission barrier heights based on the scaling procedure.

12827 Neutron multiplicity equation and its application for (n,2n) multiplication measurements by statistical correlation techniques. Kumar, A.; Srinivasan, M. (Institut de Genie Atomique, Ecole Polytechnique Federale de Lausanne, PHB-Ecublens, CH-1015 Lausanne). *Nuclear Science and Engineering;* **93**: No. 3, 240-247(Jul 1986).

A new equation, called the neutron multiplicity equation (NME), has been derived starting from basic physics principles. Neutron multiplicity v is defined as the integral number of neutrons leaking from a neutron multiplying system for a source neutron introduced into it. Probability distribution of neutron multiplicities (PDNMs) gives the probability of leakage of neutrons as a function of their multiplicity v. The PDNM is directly measurable through statistical correlation techniques. In a specific application, the NME has been solved for PDNM as a function of v for /sup 9/Be spheres of varying radii and driven by a centrally located 14-MeV deuterium-tritium neutron source. The potential of NME for sensitivity analysis is demonstrated through a particular modification of secondary neutron transfer cross sections of /sup 9/Be. It turns out that PDNM is very sensitive, even as the "average" neutron leakage is practically insensitive to it.

12828 Nuclear information needs for the astrophysical s-process. Mathews, G.J.; Howard, W.M.; Takahashi, K.; Ward, R.A. (Univ. of California, Lawrence Livermore National Lab., Livermore, CA 94550). pp 927-931 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

The astrophysical s-process is a sequence of neutron-capture and beta-decay reactions on a slow time scale compared to beta-decay lifetimes near the line of stability. The authors systematically study this detailed sequence of neutron capture, continuum and bound-state beta decay, positron decay, and electron-capture reactions that comprise the s-process for a broad range of astrophysical environments. The results are then compared with the solar-system abundances of heavy elements to determine the range of physical conditions responsible for their nucleosynthesis. The nuclear data needs are extensive, but have begun to be precise enough to allow for a consistent interpretation of the astrophysical site for the s-process.

12829 Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments. Hetrick, D.M.; Fu, C.Y.; Larson, D.C. (Oak Ridge National Lab.). pp 1197-1200 of Nuclear data for basic and applied science. Volume 2. Young, P.G.; Brown, R.E.; Auchampaugh, G.E.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Nuclear model codes were used to compute cross sections for neutron-induced reactions on /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr for incident energies from 1 to 20 MeV. The input parameters for the model codes were determined through analysis of experimental data in this energy region. The models used, the input data, the resulting calculations, and comparisons with measured data are discussed.

12830 Uncertainty propagation from raw data to final results. Larson, N.M. (Oak Ridge National Lab.). pp 1593-1596 of Nuclear data for basic and applied science. Volume 2. Young, P.G.; Brown, R.E.; Auchampaugh, G.E.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Reduction of data from raw numbers (counts per channel) to physically meaningful quantities (such as cross sections) is in itself a complicated procedure. Propagation of experimental uncertainties through that reduction process has sometimes been perceived as even more difficult, if not impossible. At the Oak Ridge Electron Linear Accelerator, a computer code ALEX has been developed to assist in the propagation process. The purpose of ALEX is to carefully and correctly propagate all experimental uncertainties through the entire reduction procedure, yielding the complete covariance matrix for the reduced data, while requiring little additional input from the experimentalist beyond that which is needed for the data reduction itself. The theoretical model used in ALEX is described, with emphasis on transmission measurements. Application to natural iron and natural nickel measurements is shown.

12831 Nuclear transport-phenomena in low-energy heavy-ion collisions. Huizenga, J.R.; Schroeder, W.U. (Univ. of Rochester, NY). pp 255-279 of Semiclassical descriptions of atomic and nuclear collisions. Bang, J.; de Boer, J. (eds.). Amsterdam, Netherlands; Elsevier Science Publishers B.V. (1985).

From Proceedings of the Niels Bohr centennial conference; Copenhagen, Denmark (25-28 Mar 1985).

The characteristic properties of a new nuclear reaction mechanism induced in low-energy heavy-ion collisions are discussed. Collision dynamics and final fragment production are indic-

ative of transport processes occurring in nuclear matter far from equilibrium. These relaxation mechanisms are mediated dominantly by the exchange of independent nucleons between the reaction partners. 15 references, 32 figures.

12832 **Static deformations and rotational excitations of baryons in the Skyrme model.** Hajduk, C.; Schwesinger, B. (State Univ. of New York, Stony Brook). *Physics Letters [Section] B;* **145B**: No. 3-4, 171-175(20 Sep 1984). Contract AC02-76ER13001.

The stability of baryons against static quadrupole deformations is studied. In the Skyrme model the nucleon and the Δ-isobar turn out to be spherical. States having a spin different from their isospin ($K > 0$) are strongly deformed and lie ~500 MeV above the ground states. 12 references, 2 figures, 1 table.

12833 **Watson's theorem and resonant pion photoproduction amplitude in the delta channel.** Wittman, R.; Davidson, R.; Mukhopadhyay, N.C. (Rensselaer Polytechnic Institute, Troy, NY). *Physics Letters [Section] B;* **142B**: No. 5,6, 336-339(2 Aug 1984). Contract AC02-83ER40114.

The CGLN and BL theories of the pion photoproduction on nucleons, used in nuclear calculations, are examined regarding their predictions of the resonant $M_1 +$ and $E_1 +$ multipoles. The nonunitary BL approach violates Watson's theorem, and predicts these multipoles poorly. In the static limit, the CGLN multipoles satisfy Watson's theorem and are in fine agreement with data. The unitarized BL multipoles agree with those from the Olsson theory and data. 15 references, 3 figures.

12834 **Breakup-fusion description of nonequilibrium protons from (α,p) reactions.** Udagawa, T.; Li, X.H.; Tamura, T. (Univ. of Texas, Austin). *Physics Letters [Section] B;* **135B**: No. 5-6, 333-336(16 Feb 1984).

The nonequilibrium part of the proton spectra from a few (α,p) reactions is calculated, assuming the breakup-fusion (BF) mechanism. It is shown that the calculation reproduces very well the higher-energy parts of the observed spectra, but underestimates the lower-energy parts. The reason why this happens and a plausible mechanism that may fill up this gap are discussed. 12 references, 2 figures.

12835 **Theoretical aspects of double beta decay.** Haxton, W.C. (Theoretical Div., Los Alamos National Lab., Los Alamos, NM 87545). pp 252-267 of Fifth workshop on grand unification. Kang, K.; Fried, H.; Frampton, P. Singapore, Singapore; World Scientific Pub. Co. Pte. Ltd. (1984). (CONF-8404155—).

From 5. workshop on grand unification; Providence, RI, USA (12 Apr 1984).

Considerable effort has been expended recently in theoretical studies of double beta decay. Much of this work has focused on the constraints this process places on gauge theories of the weak interaction, in general, and on the neutrino mass matrix, in particular. In addition, interesting nuclear structure questions have arisen in studies of double beta decay matrix elements. After briefly reviewing the theory of double beta decay, some of the progress that has been made in these areas is summarized.

6540 Radiation And Shielding Physics

REFER ALSO TO CITATION(S) 11222, 12664, 12728, 12749

12836 **(DOE/ER/60474—1) Biophysical studies related to energy generation: Eighteen year progress report.** Green, A.E.S. (Florida Univ., Gainesville (USA). Dept. of Nuclear Engineering Sciences). 24 Dec 1986. Contract FG05-86ER60474. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003908.

Research accomplishments are briefly summarized. These include the successful transfer of the detailed atomic cross section approach from aeronomy to radiological physics, the application of analytic shell and optical model electron-atom potentials to estimations of electronic excitation and ionization cross sections for radiological applications, the use of two dimensional yield spectra to applied energy degradation studies, research into energy-atmospheric environments, and work on connecting gaseous and liquid phase electron energy loss measures. A list of publications is included.

12837 **(IAE—3870/4) Restoration of an approximate neutron pulse shape according to known temporal moments.** Stolypin, V.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700378.

The formula for the approximate neutron pulse description through the whole neutron energy range is suggested. It goes over into the known formulae for neutron pulse description with the energy exceeding greatly the energy of thermal motion of moderator nuclei, and into the formula describing time variations of neutron distributions which are in equilibrium with moderator nuclei. The error in peak value determination of neutron density is shown not to exceed 10%. 10 refs.; 4 figs.; 3 tabs.

12838 **(IAE—3942/4) Comparison of solutions of a nonstationary diffusion equation and the telegraph equation for the description of time variation of the thermal neutron density.** Stolypin, V.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700379.

Solutions of the telegraph and neutron nonstationary diffusion equations are analyzed. Applicability limits for diffusion approximation are established to describe thermal neutron transport. Solutions of the telegraph and neutron nonstationary diffusion equations, used for the description of thermal neutron transport, are shown to be similar, if a thermal neutron source is the density of fast neutron slowing-down into thermal one. 6 refs.

12839 **(INIS-BR—543) Direct observation of gliding dislocations interactions with defects in irradiated niobium single crystals by means of the high voltage electronic microscopy (HVEM).** Otero, M.P. (Sao Paulo Univ. (Brazil)). 1985. 156p. (In Portuguese). NTIS (US Sales Only), PC A08/MF A01. File Number DE87700350.

The interactions of gliding dislocations with defects in irradiated niobium that result in the formation of dislocations channels. The effects in the mechanical behaviour of [941]- and [441]- oriented Nb single crystals due to oxygen addition, neutron and electron irradiation was observed either by macroscopic deformation in a Instron machine or 'in-situ' deformation in the HVEM-High Voltage Electron Microscope. Some specimens were irradiated at IPNS-Intense Pulsed Neutron Source, at 325 K, with 5×10^{17} n/cm², others were irradiated with electrons in the HVEM. The interactions between gliding dislocations with clusters point defects and dislocations were observed. The primary mechanism for removal of the clusters by the gliding dislocations was the 'sweeping' of the clusters along with the gliding dislocations. As to the point defects, they were 'swept' by the gliding dislocations and left as aligned loops close to the intersections of the gliding dislocations with the upper and lower specimen surfaces. For the illustration of this phenomena, a schematic drawing was made. The mechanism of 'bowing-out' interaction of dislocations with defect clusters was also observed. The reported anomalous slip observed to operate in the [941]- oriented Nb was also directly observed and a qualitive explanation along with a schematic drawing was proposed. This would explain the softenig observed after the yield stress in the [941]- oriented Nb deformed in the Instron machine.

12840 (INIS-SU—369, pp 295-297) **Distribution of hadron intranuclear cascade for large distance from a source.** Bibin, V.L.; Kazarnovskij, M.V.; Serezhnikov, S.V. (AN SSSR, Moscow. Inst. Yadernykh Issledovanij). 1985. (In Russian). NTIS (US Sales Only), PC A19/MF A01. File Number DE87780052. (CONF-8410203—Vol.2).

From 9. All-Union conference on charged particle accelerators; Dubna, USSR (16 Oct 1984).

Analytical solution of the problem of three-component hadron cascade development for large distances from a source is obtained in the framework of a series of simplifying assumptions. It

makes possible to understand physical mechanisms of the process studied and to obtain approximate asymptotic expressions for hadron distribution functions.

12841 (LAFI—079) Role of 3d-ions for radiation defect production in MgO and $MgAl_2O_4$. Mironova, N.A.; Grinvald, G.A.; Skvortsova, V.N. (AN Latvijskoj SSR, Riga. Inst. Fiziki). 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700352.

Optical properties of MgO and $MgAl_2O_4$ crystals containing chromium and manganese impurity ions were studied by exposure to but all types of radiation. Complicated defects of the "impurity-intrinsic matrix defect" type were preferably considered. It has been shown that different symmetry center forming chromium ions in MgO:Crsup(3+) change their valency with various efficiency being exposed to external action. Besides, the compensating vacancy does not participate in the hole center formation. For $MgOxAl_2O_3$ single crystals the presence of octahedrally coordinated manganese ions suppresses the hole center creation by gamma-irradiation. Studying luminescence spectra of Crsup(3+) ions in $MgAl_2O_4$ it has been states that neutron irradiation increases the degree of inversion for the magnesium-aluminium spinel. 38 refs.; 13 figs.

12842 Incorporation of Monte Carlo electron interface studies into photon general cavity theory. Horowitz, Y.S.; Moscovitch, M.; Mack, J.M.; Kearsley, H.H.E. (Ben Gurion Univ. of the Negev, Physics Dept., Beersheva 84105). *Nuclear Science and Engineering;* **94**: No. 3, 233-240(Nov 1986).

Electron Monte Carlo calculations using CYLTRAN and a new PHSECE (Photon-Produced Secondary Electrons) technique were carried out to estimate electron fluences and energy deposition profiles near LiF/Al and LiF/Pb material interfaces undergoing /sup 60/Co gamma irradiation. Several interesting and new features emerge: (a) although the buildup of the secondary electron fluences at the interfaces of the irradiated media is approximately exponential, the value of the electron mass fluence buildup coefficient, γ, is not equal to the electron mass fluence attenuation coefficient, β; (b) the β value of the attenuation of the gamma generated electron fluences at the cavity/medium interfaces is strongly dependent on the Z of the adjacent material; and (c) for LiF/Pb there is a significant "intrusion" energy deposition mode arising from sidescattering in the wall material (lead).

12843 Approximate solution to the Kolmogorov equation for a fission chain-reacting system. Ruby, L.; McSwine, T.L. (Univ. of California, Berkeley, Dept. of Nuclear Engineering, Berkeley, CA). *Nuclear Science and Engineering;* **94**: No. 3, 271-273(Nov 1986).

An approximate solution has been obtained for the Kolmogorov equation describing a fission chain-reacting system. The method considers the population of neutrons, delayed-neutron precursors, and detector counts. The effect of the detector is separated from the statistics of the chain reaction by a weak coupling assumption that predicts that the detector responds to the average rather than to the instantaneous neutron population. An approximate solution to the remaining equation, involving the populations of neutrons and precursors, predicts a negative-binomial behaviour for the neutron probability distribution.

12844 Choice of biasing function for source biasing. Gelbard, E.M. (Argonne National Lab., Applied Physics Div., Argonne, IL). *Nuclear Science and Engineering;* **94**: No. 3, 274-276(Nov 1986).

Two different descriptions have been used for Monte Carlo source biasing. One relies on a direct optimization of biasing parameters, the other on an intuitive application of the adjoint flux. But use of the adjoint flux is based on the assumption that importance sampling will be used throughout the calculation, and that source sampling will not be stratified. It is shown that if these conditions are not satisfied, use of the importance functions has no theoretical justification and, in principle, biasing parameters must be optimized directly. Source biasing is probably the simplest, and one of the oldest, of all variance-reduction techniques, and one might suppose that it is, by now, perfectly well understood.

12845 A flux-limited diffusion model for charged-particle transport. Dorr, M.R. (Lawrence Livermore National Lab., P.O. Box 808, Livermore, CA). *Nuclear Science and Engineering;* **94**: No. 2, 157-166(Oct 1986).

A new algorithm for modeling charged-particle transport in a fully ionized plasma is presented. A standard multigroup discretization of the Fokker-Planck-Boltzmann equation is transport corrected to implicitly include the anisotropic effects of both coulomb scattering and nuclear reactions. This allows the subsequent application of the Levermore flux-limited diffusion theory, which was originally developed for isotropic radiative transfer calculations. A finite differencing of the resulting spatial transport operator is constructed so as to yield centered and upwinded operators in the diffusion and free-streaming limits, respectively. The time integration is performed by the general purpose ordinary differential equation solver TORANAGA. This approach results in a highly vectorizable algorithm that has been implemented on the CRAY-1. Some numerical results are presented that compare this algorithm to the corresponding, but far more expensive, Monte Carlo calculations.

12846 An interpolation method for functions of two variables with applications to radiation measurements. Hsu, H.H. (Los Alamos National Lab., Physics Div., Mail Stop D410, Los Alamos, NM). *Nuclear Science and Engineering;* **94**: No. 2, 199-205(Oct 1986).

An interpolation method is developed for functions of two variables. This approach uses semiempirical formulas with several parameters, avoiding the large data base and repetitious calculations characteristic of the usual interpolation methods. Two examples illustrate the method. In principle, the method can be extended to cases with more than two variables.

12847 Carbon Kerma factor for 18- and 20-MeV neutrons. DeLuca, P.M. Jr.; Barschell, H.H.; Burhoe, M.; Haight, R.C. (Univ. of Wisconsin, 1300 University Avenue, Madison, WI). *Nuclear Science and Engineering;* **94**: No. 2, 192-198(Oct 1986).

Earlier measurements of the kerma factor of carbon have been extended to neutron energies of 18 and 20 MeV. The measured values are lower than published values based on estimated microscopic cross sections.

12848 A finite element projection method for the solution of particle transport problems. Wills, E.; Roderick, N.; McDaniel, P. (McClellan Central Lab., McClellan Air Force Base, Sacramento, CA 95652). *Nuclear Science and Engineering;* **93**: No. 3, 291-307(Jul 1986).

A method for solving particle transport problems has been developed. In this method the particle flux is expressed as a linear and separable sum of odd and even components in the direction variables. Then a Bubnov-Galerkin projection technique and an equivalent variational Raleigh-Ritz solution are applied to the second-order transport equation. A dual finite element basis of polynomial splines in space and spherical harmonics in angle is used. The general theoretical and numerical problem formalism is carried out for a seven-dimensional problem with anisotropic scattering, time dependence, three spatial and two angular variables, and with a multigroup treatment of the energy dependence. The boundary conditions for most physical problems of interest are dealt with explicitly and rigorously by a classical minimization (variational) principle. Finally, the computational validation of the method is obtained by a computer solution to the monoenergetic steady-state air-over-ground problem in a cylindrical (r,z) geometry and with an exponentially varying atmosphere.

12849 Some remarks on convergence and stability in ray-tracing calculations. Nelson, P.; Zelany, R. (Institute for Numerical Transport Theory, Dept. of Mathematics, Texas Tech Univ., Lubbock, TX 79409). *Nuclear Science and Engineering;* **93**: No. 3, 283-290(Jul 1986).

A class of finite difference methods, the linear one-cell functional methods, is introduced, and observed to encompass the vast majority of spatial approximations used in one-dimensional transport theory. It is noted that, under minimal additional assumptions, these methods satisfy the classical result, valid for one-step finite

difference approximations to initial value problems, that consistency implies both convergence and stability. This explains the observed absence of nonconvergence and instability from ray-tracing calculations, and also indicates the limitations of this result.

12850 **Generalization of neutron transport predictive models utilizing sensitivity theory and its implementation into a computer code.** Bhuiyan, S.I.; Roussin, R.W.; Lucius, J.L.; Marable, J.H.; Bartine, D.E. (Bangladesh Atomic Energy Commission, Institute of Nuclear Science and Technology, P.O. Box 3787, Dhaka). *Nuclear Science and Engineering;* **93**: No. 3, 313-317(Jul 1986).

Three models, a linear, exponential or BEST, and a power model, developed using sensitivity theory to predict deep-penetration neutron transport in practical shielding problems, have been generalized into a common expression. One can obtain any of the above three models from this generalized expression simply by choosing the proper index parameters. Subsequently, a scheme for implementation of this into a computer code was adopted in "SENATOR." SENATOR replaces the SENTINEL module of the Oak Ridge National Laboratory (ORNL) FORSS system. The supporting data bases (i.e., the sensitivity profile) and the Fortran code, along with some utility programs, are assembled in a package identified as CONSENT and can be obtained through the Radiation Shielding Information Center at ORNL.

12851 **A combination of F/sub n/ and TP/sub n/ methods.** Ganguly, K. (Texas Tech Univ., Dept. of Mathematics, Lubbock, TX 79409). *Nuclear Science and Engineering;* **93**: No. 3, 308-312(Jul 1986).

The ideas of the F/sub N/ and transport P/sub N/ approximation (TP/sub N/) methods in transport theory are suitably combined to formulate an accurate approximation scheme for the monoenergetic transport equation. The method involves the use of the singular integral equation for the surface flux as used in the F/sub N/ method and angular flux representation of the TP/sub N/ approximation. This leads to a consistent approximate scheme for the computation of angular flux.

12852 **A calorimetric measurement of the heat deposition in the vicinity of a spallation neutron target.** Fischer, W.E.; Moritz, L.; Spitzer, H.; Thorson, I.M. (Schweizerisches Institut fur Nuklearforschung, 5234 Villigen). *Nuclear Science and Engineering;* **93**: No. 3, 273-282(Jul 1986).

An experiment to measure the heat deposition in various materials in the vicinity of a spallation neuron target is described. This experiment has been performed at the Thermal Neutron Facility, TRIUMF. In the analysis of the data, the contributions to the heat deposition from (n,γ) capture processes, fast neutron, and prompt gamma-ray scattering are separated.

12853 **Resonance self-shielding in fast neutron spectra.** Mo, S.C. Lafayette, IN; Purdue Univ. (1986). 246p. University Microfilms Order No. 86-22,196.

Thesis (Ph. D.).

The study of resonance self-shielding in heterogeneous media has direct applications on the design and analyses of fast neutronic problems. Integral reaction rate measurements using resonance detector foils require a self shielding correction to account for the spatial shielding effect of the foil. Typical experimental correction technique based on extrapolating measurements for several foils of different thicknesses can lead to uncertainties in the experimental data. A new analysis method was developed to evaluate the foil correction factors of resonance detectors in fast neutron spectra. The new analysis method is based on an iterative treatment of the integral transport equation that describes the single and multiple scattering processes inside the detector foil. The foil correction factor at each experimental position is related to the impinging neutron spectrum by combining the resonance self-shielding factors of individual Doppler broadened resonances with the multigroup reaction rates obtained from the results of a two-dimensional diffusion theory calculation. Another important subject concerning heterogeneous resonance self-shielding occurs near a zone interface that separates regions of a different material compositions. Such transition was observed experimentally in the capture data of ^{238}U near the FBBF transformer-blanket interface.

12854 **Capture in the 1.15-keV iron resonance.** Weston, L.W.; Todd, J.H. (Oak Ridge National Lab., Oak Ridge, TN 37831). pp 585-588 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

The 1.15-keV resonance in iron is important to fast reactors in that a major part of the iron capture integral is due to this one resonance. This resonance is also a good test case for capture gamma-ray detectors, which are meant to have an efficiency independent of gamma-ray energy spectra, because this resonance has an unusually hard spectrum and other iron resonances do not. There have been severe discrepancies among different groups who have measured the capture area and transmission of this resonance. A new measurement, employing C/sub 6/F/sub 6/ liquid scintillators and pulse-height weighting to effect total energy detection, has been made of the ratio of the capture area of the 22.8-keV resonance relative to that of the 1.15-keV resonance. The 22.8-keV resonance has a relatively soft gamma-ray spectrum and there is agreement on the capture area. The results (2.91 +. 0.17) agree well with transmission measurements and confirm the applicability of total energy detectors for use on capture resonances with very hard capture gamma-ray spectra.

12855 **VITAMIN-E 174n, 38G general purpose cross-section library.** Roussin, R.W.; White, J.E.; Bartley, J.L. (Radiation Shielding Information Center, Oak Ridge National Lab., P.O. Box X, Oak Ridge, TN 37831). pp 799-802 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

VITAMIN-E, offering a different approach to obtaining multigroup cross sections for a wide range of radiation transport analyses, is now available from RSIC.

From Midyear topical symposium of the Health Physics Society: health physics of radiation-producing machines; Reno, NV, USA (8 Feb 1987).

An organized and structured safety program for x-ray generating devices was initiated in October, 1979. An X-ray Device Control Office was established to manage the program that currently oversees the activities of 201 x-ray generating devices and to provide SOP reviews, perform shielding calculations, and provide training for both the operators and health physics x-ray device surveyors. The new program also establishes controls for procurement of new equipment, requires the writing of Standard Operating Procedures, requires training for operators and provides routine and non-routine safety inspections of x-ray generating devices. Prior to this program going into effect, the Laboratory had recorded nine documented x-ray related exposure accidents. Since then, there

have been none. Program elements and experiences of interest to other x-ray device users are discussed. 3 refs.

12858 **(PNL-SA—13687) Status of beta measurement evaluation and upgrade program.** Swinth, K.L. (Pacific Northwest Lab., Richland, WA (USA)). 1986. Contract AC06-76RL01830. 6p. (CONF-860149—4). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002062.

From DOE beta measurement workshop; Albuquerque, NM, USA (23 Jan 1986).

In 1983, the US Department of Energy (DOE) initiated a program to evaluate and upgrade beta dosimetry capabilities at DOE and DOE-contractor facilities. The program has several elements which structure the development of improvements in beta measurement practices. In addition to Pacific Northwest Laboratory (PNL), universities, private corporations, and other DOE facilities are involved in the research efforts.

12859 **(UCRL—95043) Production and shielding of x rays from electron beam vapor sources.** Singh, M.S. (Lawrence Livermore National Lab., CA (USA)). 14 Nov 1986. Contract W-7405-ENG-48. 12p. (CONF-870219—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002756.

From Midyear topical symposium of the Health Physics Society: health physics of radiation-producing machines; Reno, NV, USA (8 Feb 1987).

Electron-beam vapor sources are now widely used in material processing sciences and coating technologies, such as the semiconductor industry for producing aluminum films on Si wafers; the metallurgical industry for melting, evaporating, and refining metals; and at Lawrence Livermore National Laboratory (LLNL) for vaporizing metals for laser isotope separation applications. Power for these sources ranges from the kW regime in the semiconductor industry to the multi-MW regime in laser separation technology. Operations of these sources can generate copious amounts of x rays by the direct and indirect interactions of the energetic electrons with the target materials. In this paper, we present the results of our calculations regarding the x-ray emission intensity, angular intensity and energy spectrum distribution, and shielding characteristics for vapor sources with acceleration voltages from 10 kV to 60 kV. 4 refs., 12 figs., 2 tabs.

12860 **(CONF-870220—1) Resonance ionization mass spectrometry using ion-beam sampling.** Goeringer, D.E.; Christie, W.H. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87001834.

From Southwest optics conference; Albuquerque, NM, USA (9 Feb 1987).

Resonance ionization mass spectrometry has been used to study the effects of surface chemistry on neutral yields from ion-beam sputtered samples. 2 refs., 2 tabs.

12861 **(DOE/ER/45199—T1) Inelastic scattering in condensed matter with high intensity Moessbauer radiation: Progress report for period March 1, 1986-October 31, 1986.** Mullen, J.G. (Purdue Univ., Lafayette, IN (USA). Dept. of Physics). Oct 1986. Contract FG02-85ER45199. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003996.

The scientific progress made during the past year can be broadly classified into three categories. First, new techniques have been found for measuring Moessbauer parameters using a microfoil conversion electron (MICE) detector. The MICE detector, coupled with high intensity sources and a LiF crystal monochromator, has permitted an accurate measurement of both the interference parameter and the lifetime of the Moessbauer isomer for the 46.5 keV transition in ^{183}W. The MICE detector has also been used in a double resonance geometry, where a conventional detector is replaced by a resonant MICE detector, to measure the temperature dependence of the recoil-free fraction for metallic tungsten. A second area where important scientific results were found was with the resonance scattering from TaS_2-1T. In addition to a sharp cusp in the inelastic scattering found just above the 80 K incommensurate to commensurate transition, a sharp discontinuity was found in the elastic and inelastic fractions of the scattered lines from the (100) primary satellites. A temperature dependence to the Debye-Waller factor was also found which is independent of the scattering wave vector, contrasting completely with the common k^2 dependence associated with phonons. High intensity Moessbauer sources have been fabricated (100 Ci) permit the k space resolution in gamma scattering comparable to an x-ray machine, while still maintaining the energy resolution of Moessbauer spectroscopy. Because of this capability, the first resolution function analysis for gamma scattering has been applied to TDS studies in silicon. 7 refs.

12862 **(DOE/ER/45200—2-10/86) Inelastic scattering in condensed matter with high intensity Mossbauer radiation: Progress report for period March 1, 1986-October 31, 1986.** Yelon, W.B.; Schupp, G. (Missouri Univ., Columbia (USA). Research Reactor Facility). Oct 1986. Contract FG02-85ER45200. 12p. NTIS, PC A02/MF A01; 2; GPO Dep. File Number DE87003379.

The scientific progress made during the past year can be broadly classified into three categories. First, new techniques were found for measuring Mossbauer parameters using our microfoil conversion electron (MICE) detector. The MICE detector, coupled with our high intensity sources and a LiF crystal monochromator, has permitted an accurate measurement of both the interference parameter and the lifetime of the Mossbauer isomer for the 46.5 keV transition in ^{183}W. The MICE detector was also used in a double resonance geometry, where a conventional detector is replaced by a resonant MICE detector, to measure the temperature dependence of the recoil-free fraction for metallic tungsten. Signal-to-background enhancement attained by this technique for the 46.5 keV line of ^{183}W was a factor of three better than that found for an intrinsic germanium detector in transmission geometry. Secondly in the resonance scattering from TaS_2-1T in addition to a sharp cusp in the inelastic scattering found just above the 80 K incommensurate to commensurate transition, a sharp discontinuity was found in the elastic and inelastic fractions of the scattered lines from the (100) primary satellites. A temperature dependence to the Debye-Waller factor was found which is independent of the scattering wave vector, contrasting completely with the common k^2 dependence associated with phonons. The high intensity Mossbauer sources which were fabricated (100 Ci) permitted the k space resolution in gamma scattering comparable to an x-ray machine, while still maintaining the energy resolution of Mossbauer spectroscopy. The first resolution function analysis for gamma scattering was carried out and applied to TDS studies in silicon. 8 refs.

12863 **(DOE/ER/45200—T1) Inelastic scattering in condensed matter with high intensity Moessbauer radiation. Progress report, March 1-October 31, 1986.** Yelon, W.B.; Schupp, G. (Missouri Univ., Columbia (USA). Research Reactor Facility). Oct 1986. Contract FG02-85ER45200. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002122.

The scientific progress made during the past year can be broadly classified into three categories. First, new techniques for measuring Moessbauer parameters using a microfoil conversion electron (MICE) detector have been developed. Second, work has continued on resonance scattering from TaS_2-IT. Finally, a high intensity Moessbauer source has been fabricated which permits k space resolution comparable to an x-ray machine. A list of publications is included. (DWL)

12864 **(DOE/ER/53179—T5) Nuclear spin-polarized HD, D_2, HT and DT solids, liquids and high density gases: Quarterly status report No. 9, July 1, 1986-September 30, 1986.** (Syracuse Univ., NY (USA). Dept. of Physics). 30 Oct 1986. Contract FG02-84ER53179. 4p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003385.

Testing and troubleshooting of a dilution refrigerator is reported. Efforts to obtain large and extremely pure ortho-D_2 samples and plans for future experiments are described.

12865 **(LA—10674-MS) Finite strain measures.** Cook, W.A. (Los Alamos National Lab., NM (USA)). Dec 1986. Contract W-7405-ENG-36. 84p. NTIS, PC A05/MF A01. File Number DE87003660.

The first in a series of reports on nonlinear mechanics, this report derives, discusses, and illustrates finite strain measures. Included are deformations for configurations (or states) of a deforming body, coordinate systems to describe the configurations, and descriptions (approaches used to describe translation, rotation, and deformation). Green and Almansi strains are derived for the corotational and codeformational descriptions. Solutions of deformation example problems and comparison of the results indicate that for these two strains (1) in the case of a rectangular body with uniform extensions, they are quite different; (2) in the case of a rectangular body in simple shear, their two shearing strains are identical and their nonzero normal strains have identical magnitudes but opposite signs; (3) in the case of a cylinder, inflation and extension correspond to uniform extension whereas torsion corresponds to simple shear; and (4) in the case of longitudinal to circular beam deformation, they can be compared with uniform extension when stretch is constant in each direction. Therefore, solution of these example problems indicates that differences between Green and Almansi strains are in the normal strains and that their shearing strains are identical when differences in the normal strains are eliminated. Signorini and blank (unnamed) strains are also defined; and Green, Almansi, Signorini, blank, Biot, and logarithmic strains are all compared for a uniform extension problem. All strain measures lead to correct solutions in nonlinear mechanics when problems are formulated correctly and the constitutive relations are accurate. 12 refs., 20 figs.

12866 **(LA—10715-MS) General finite strain tensors.** Cook, W.A. (Los Alamos National Lab., NM (USA)). Dec 1986. Contract W-7405-ENG-36. 27p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87003807.

This report derives, illustrates, and compares general strain tensors (or measures). General strain tensors are a generalization of the Green and Almansi strain tensors that use the reference configuration (or state) to describe the strain tensors as a linear combination of the undeformed and deformed configurations. Two different descriptions (approaches used to describe translation, rotation, and deformation) are used to derive general strain tensors: (1) the corotational, which uses material coordinates to describe the undeformed configuration; spatial coordinates to describe the deformed configuration; and reference coordinates to describe the reference configuration; and (2) the codeformational, which uses convected coordinates to describe the undeformed, deformed, and reference configurations. Because strain tensors have a set of principal axes, along which is an associated stretch (the ratio of differential lengths [deformed/undeformed]), we were able to use functions of stretch to compare strain measures. We used a uniform extension problem to illustrate the general strain tensors and to compare with other strain measures.

12867 **(LA-UR—86-3827) One-dimensional easy-plane magnets: Classical sine-Gordon theory or a quantum model?.** Wysin, G.M.; Bishop, A.R. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 12p. (CONF-8605199—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002910.

From 6. CNLS annual conference on nonlinearities in condensed matter; Los Alamos, NM, USA (4 May 1986).

A classical mechanics description of one-dimensional easy-plane ferro- and antiferromagnets predicts the existence of sine-Gordon kink excitations in these systems, for the case of a small applied field within the ("strong") easy plane. Here we consider: (1) the deviations from the sine-Gordon model, due to stronger fields or weaker anisotropy, which result in modified kink properties, including negative effective masses and kink-antikink annihilation and reflection during collisions, and, (2) equilibrium thermodynamics, especially specific heat, for quantum spin S = 1/2, and S = 1 models, comparing with the predictions of classical sine-Gordon theory and with available experimental results. The applicability of a sine-Gordon model versus a quantum model or the full classical magnetic Hamiltonian is discussed, for materials such as $CsNiF_3$, CHAB [$(C_6H_{11}NH_3)CuBr_3$] and TMMC [$(CD_3)_4NMnCl_3$]. 27 refs., 7 fgis.

12868 **(LBL—21941) A molecular surface science study of the structure of adsorbates on surfaces: Importance to lubrication.** Mate, C.M. (California Univ., Berkeley (USA)). Sep 1986. Contract AC03-76SF00098. 249p. NTIS, PC A11/MF A01; 1; GPO Dep. File Number DE87003521.

The interaction and bonding of atoms and molecules on metal surfaces is explored under ultra-high vacuum conditions using a variety of surface science techniques: high resolution electron energy loss spectroscopy (HREELS), low energy electron diffraction (LEED), thermal desorption spectroscopy (TDS), Auger electron spectroscopy (AES), work function measurements, and second harmonic generation (SHG). 164 refs., 51 figs., 3 tabs.

12869 **Analysis of the lowest 4f→5d two-photon transition in Ce/sup 3+/:CaF_2.** Gayen, S.K.; Hamilton, D.S.; Bartram, R.H. (Department of Physics and Institute of Materials Science, University of Connecticut, Storrs, Connecticut 06268). *Physical Review [Section] B: Condensed Matter;* **34**: No. 11, 7517-7523(1 Dec 1986).

A theoretical estimate of the two-photon absorption (TPA) cross section for the lowest 4f→5d zero-phonon transition in Ce/sup 3+/:CaF_2 is presented. A point-charge crystal-field model is used to calculate the odd component of the C_4/sub v/ crystal field which mixes states of opposite parity into the initial and final states participating in the transition. The sum over intermediate states is evaluated by assuming a constant energy denominator and using a closure approximation. The calculated magnitude and polarization anisotropy of the TPA cross section are compared with the experimentally measured values and methods to improve the calculation are discussed.

12870 **Effective interactions for self-energy. I. Theory.** Ng, T.K.; Singwi, K.S. (Department of Physics and Astronomy, Northwestern University, Evanston, Illinois 60201). *Physical Review [Section] B: Condensed Matter;* **34**: No. 11, 7738-7742(1 Dec 1986).

A systematic way of deriving effective interactions for self-energy calculations in Fermi-liquid systems is presented. The self-energy expression contains effects of density and spin fluctuations and also multiple scattering between particles. Results for arbitrarily polarized one-component Fermi-liquid systems and unpolarized two-component systems are explicitly given.

12871 **Effective interactions for self-energy. II. Application to electron and electron-hole liquids.** Ng, T.K.; Singwi, K.S. (Department of Physics and Astronomy, Northwestern University, Evanston, Illinois 60201). *Physical Review [Section] B: Condensed Matter;* **34**: No. 11, 7743-7747(1 Dec 1986).

Effective masses in an electron gas and an electron-hole liquid are calculated for different values of r/sub s/ and of the ratio M/sub h//M/sub e/ (in the case of the electron-hole liquid) using the self-energy expressions derived in the preceding paper [Ng and Singwi, Phys. Rev. B 34, 7738 (1986)]. In the case of an electron gas, it is found that spin-fluctuation effects lead to an appreciable amount of mass enhancement for metallic r/sub s/ values, whereas in the case of an electron-hole liquid, both spin and density fluctuations are important in determining the quasiparticle properties.

12872 **Microcanonical simulation of the three-dimensional random-field Ising model.** Arian, Y.; Shapir, Y. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973 and Department of Physics, State University of New York, Stony Brook, New York 11794). *Physical Review [Section] B: Condensed Matter;* **34**: No. 11, 8133-8136(1 Dec 1986).

Results of large microcanonical simulations of the three-dimensional random-field Ising model are reported, including the distribution of local magnetizations. Domains are shown to be formed already above T/sub c/. The apparent behavior near the critical point, strongly affected by divergent relaxation times, varies with the random-field excess. For some realizations the sudden flip of a large domain appears as a discontinuous transition.

12873 **Predicting new solids and superconductors.** Cohen, M.L. (Univ. of California, Berkeley). *Science (Washington, D.C.);* **234**: 549-553(31 Oct 1986). Contract AC03-76SF00098.

It is now possible to start with a simple model of a solid composed of atomic cores and itinerant valence electrons and compute the total energy for a given structural arrangement of atoms with enough precision to predict the existence of new solids and their properties. The application of the model based on the pseudopotential method is described with silicon chosen as a prototype material. With only information about the constituent atoms, the electronic, structural, vibrational, and even superconducting properties of solids can be calculated from first principles. The successful predictions of superconductivity in highly condensed hexagonal silicon and the existence of new high-pressure semiconductor phases are highlighted. A discussion is presented of the use of the method to discover new stable or metastable solids at high pressures.

12874 **Circular intensity differential scattering measurements of planar and focal Conic orientations of cholesteric liquid crystals.** Hall, K.; Keller, D.; Samori, B.; Wells, K.S. (Univ. of California, Berkeley, CA). pp 77-91 of Applications of circularly polarized radiation using synchrotron and ordinary sources. Allen, F.; Bustamante, C. New York, NY; Plenum Press (1985). (CONF-8405239—).

From Workshop on applicatons of circularly polarized synchrotron radiation; Albuquerque, NM, USA (18 May 1984).

The authors have applied the technique of circular intensity differential scattering (CIDS) to the study of oriented liquid crystals. The chirality of manipulation of their helical parameters make them an ideal system for investigating the dependence of the CIDS pattern on handedness and pitch. The authors have studied both right- and left-handed liquid crystals of pitch from 460 nm to 4 microns, with the helix axis oriented either parallel (planar orientation) or perpendicular (focal conic orientation) to the incident beam. The results showed that CIDS is sensitive to the handedness of the helix, for when two liquid crystals of the same pitch but opposite handedness were compared, the signs of their respective CIDS patterns were reversed.

12875 **Stress concentrations due to sliding grain boundaries in creeping alloys.** Lau, C.W.; Argon, A.S.; McClintock, F.A. (Massachusetts Institute of Technology, Cambridge). *American Society for Testing and Materials, Special Technical Publication;* **1**: I.551-I.571(1984). Contract AC02-77ER04461.

The most dominant singular stress distributions caused by grain-boundary sliding accommodated by power-law creep have been determined at hard grain-boundary particles and at triple grain junctions, where cavitation and eventual creep cracking are frequently observed. Finite element computations have been used to connect these local stresses to the far-field stresses. These finite element analyses incorporate a specially formulated power-type singularity element, a new method of simulating periodicity and symmetry boundary conditions, a scheme for automatic variable step selection for stable time integration, and a method to bypass the influence of incompressibility. The deviatoric stresses obtained from the finite element results show very good agreement with the dominant singularity solutions, and provide accurate estimates of the generalized stress intensity factors. 22 references, 14 figures, 1 table.

12876 **Wavepacket approach to gas-surface scattering: application to surfaces with imperfections.** Drolshagen, G.; Heller, E.J. (Los Alamos National Lab., NM). *Surface Science;* **139**: 260-280(1984).

A time dependent wavepacket approach is applied to diffractive scattering from surfaces with imperfections. This semiclassical method is based on Gaussian wavefunctions whose average positions and momenta are those of classical trajectories. The approach can be applied to arbitrary potentials. Positions, shapes and magnitudes of the diffraction peaks are obtained in a single calculation. In a first example the wavepacket method is applied to a stepped surface. The diffraction pattern is calculated for different incident scattering angles and for various regular and random distributions of steps with two different incident scattering angles and for various regular and random distributions of steps with two different sizes. Second, the approach is used to study the scattering for an interaction potential modeling a corrugated surface with adsorbed atoms. The diffraction intensities are examined for several final scattering directions and again for regular and random arrangements of the adsorbed atoms. 27 references, 8 figures.

12877 **Vibrational and configurational contributions to the thermodynamics of metallic solutions.** Williams, R.O. (Oak Ridge National Lab., TN). *CALPHAD: Computer Coupling of Phase Diagrams and Thermochemistry;* **8**: No. 2, 135-148(1984). Contract W-7405-ENG-26.

The authors have developed a solution model for the thermodynamics of metallic systems that is composed of three contributions beyond the regular solution model. The contribution due to the nonrandomness is based upon a two-term expansion of the Guggenheim statistical mechanical model. There is a vibrational contribution that is treated as being an alloying effect on the Debye temperature. In fitting this model to the data in Hultgren et al. it was necessary to include a third term that represented a bias, the precise nature of which could not be determined. It was possible to select fixed values for the three parameters that represent these effects, along with an individual interaction energy for each system, that provided a satisfactory fit of the majority of the solution data in Hultgren et al. 32 references, 7 figures, 1 table.

12878 **Complex J-integral and Peach-Koehler equation.** Chang, S.J. (Union Carbide Corp., Oak Ridge, TN). *International Journal of Fracture;* **16**: R79-R82(1980). Contract W-7405-ENG-26.

Budiansky and Rice derived the J-integral in terms of the complex stress functions phi(z) and psi(z). It is convenient for calculating the force on an elastic singularity or the energy release rate for a crack if the problem is solved by the method of complex variables. In the present paper it is shown how the Peach-Koehler equation for the force acting on a dislocation can be obtained by the complex J-integral. It is then applied to the crack model of Bilby, Cottrell, and Swinden (BCS model) to show that the J-integral of this model is equal to the sum of all forces on the dislocations which are distributed within the plastic zone. Material properties such as work hardening and rate dependence enter only if the authors are concerned with the fracture criterion. 3 references.

12879 **Josephson current in low-dimensional proximity systems and the field effect.** Kresin, V.Z. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] B: Condensed Matter;* **34**: No. 11, 7587-7595(1 Dec 1986). Contract AC03-76SF00098.

The system S/sub α/-M/sub β/-S/sub γ/ (S/sub α/ and S/sub γ/ are superconductors, M/sub β/ is a semiconductor, a semimetal, or a normal metal) is studied. Particular attention is paid to the case when M/sub β/ contains a two-dimensional electron gas (e.g., an inversion layer). A one-dimensional (1D) case is also considered. The Josephson current is evaluated and the main factors determining the field effect are studied. A special diagrammatic method allowing one to calculate the thermodynamic Green's function and, consequently, the Josephson current, has been developed. The current depends strongly on the electron concentration which leads to a noticeable field effect. The dependence of j/sub m/ on other factors, such as temperature, mobility, effect mass, etc. is also studied. The field effect appears to be stronger for low-dimensional systems. An analysis of the experimental data obtained recently for the Nb-InAs-Nb system is carried out.

12880 **Unusual temperature dependence of the upper critical field in superconducting heavy-fermion systems.** Tachiki, M.; Dunlap, B.D.; Crabtree, G.W.; Takahashi, S.; Koyama, T. (Materials Science and Technology Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *B: Condensed Matter;* **34**: No. 11, 7603-7609(1 Dec 1986).

A new formulation of the superconducting properties of heavy-fermion metals with potentially dramatic consequences for the critical field is proposed and analyzed. The new feature of the formulation consists of including the field dependence of the normal-state properties such as the magnetic susceptibility, electronic specific heat, and electronic scattering lifetime in the calculation of the superconducting critical field. These effects are important for heavy-fermion metals because (1) the characteristic energy of the low-temperature coherent state is low, so that an applied magnetic field can appreciably alter the normal-state properties, and (2) the large effective masses lead to low Fermi velocities and high orbital critical fields, so that a significant field dependence of the normal-state properties may occur below H/sub c/$_2$. A Green's-function description of the field dependence of the normal-state properties showing how they arise from field dependence of the self-energy and vertex functions in the periodic Anderson model is given. The effect of these field-dependent normal-state properties on the superconducting critical field is calculated using a generalization of standard theory. For certain values of the parameters, the calculations predict unusually steep critical-field curves and magnetic-field-induced superconductivity, qualitatively similar to recent experimental results.

12881 **Itinerant f-electron model of heavy-fermion systems.** Kim, D.J. (Materials Science and Technology Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *B: Condensed Matter;* **34**: No. 11, 8107-8110(1 Dec 1986).

Combining spin-fluctuation and electron-phonon interaction effects, we show that the large electron-mass enhancement and other properties of heavy-fermion metals may be understood qualitatively within a simple itinerant f-electron model.

12882 **(DOE/ER/13044—5) Connectivity properties of Mandelbrot's percolation process.** Chayes, J.T.; Chayes, L.; Durrett, R. (Cornell Univ., Ithaca, NY (USA)). Aug 1986. Contract AC02-83ER13044. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004002.

In 1974 Mandelbrot introduced a process in [0,1] which he called "canonical curdling" and later used in his book(s) on fractals to generate self-similar random sets with Hausdorff dimension D is an element of (0,2). In this paper we will study the connectivity or "percolation" properties of these sets, proving all of the claims he made in Section 23 of the "Fractal Geometry of Nature" and a new one that he did not anticipate: There is a probability p/sub c/ is an element of (0,1) so that if p < p/sub c/ then the set is "dustlike" i.e., the largest connected component is a point, whereas if p ≧ p/sub c/ (notice the =) opposing sides are connected with positive probability and furthermore if we tile the plane with independent copies of the system then there is with probability one a unique unbounded connected component which intersects a positive fraction of the tiles. More succinctly put the system has a first order phase transition. 13 refs., 7 figs.

12883 **(DOE/ER/13044—7) Painleve property and integrability.** Ercolani, N.; Siggia, E.D. (Arizona Univ., Tucson (USA). Dept. of Mathematics; Cornell Univ., Ithaca, NY (USA). Lab. of Atomic and Solid State Physics). 13 Jan 1987. Contract AC02-83ER13044. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004003.

For an n-degree of freedom hyperelliptic separable Hamiltonian, the pole series with n + 1 free constants, through the Hamilton-Jacobi equation, bounds the degrees of the n-polynomials in involution. When all the pole series have no fewer than 2n constants, the phase space is conjectured to be just the direct product of 2n complex lines cut out by (2n-1) integrals. 14 refs.

12884 **(DOE/ER/25009—354) Minimization by simulated annealing: Is detailed balance necessary.** Williams, R.D. (California Inst. of Tech., Pasadena (USA)). 1986. Contract AC03-81ER40050;FG03-85ER25009. 18p. (CALT—69-1407). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003560.

We consider a Hamiltonian which is derived from the design of a load-balancer for parallel computers, and which is also the Potts model with an extra term which equalizes the proportion of each Potts state. We find the global minimum of the Hamiltonian using simulated annealing (SA), and by two similar methods which do not satisfy detailed balance. The first method biasses the system toward the minimum, and finds the global minimum about 20 times faster than SA; the second method is much easier to implement on a parallel computer than SA, and results in slight degradation of performance over SA. 8 refs., 5 figs.

12885 **(DOE/ET/13146—2) Investigations of transitions from order to chaos in dynamical systems: Progress report.** Schmidt, G. (Stevens Inst. of Tech., Hoboken, NJ (USA). Dept. of Physics). Dec 1986. Contract AC02-84ER13146. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003795.

Dynamical systems were investigated using analytical, computational and experimental methods. The systems studied could be represented by two dimensional dissipative maps or nonlinear differential equations representing flow in some three dimensional phase space. It was found that a large class of these systems exhibits universal characteristics. These characteristics involve not only universal period doubling routes to chaos, but universal properties of the strange attractors representing chaotic behavior. These results were anticipated by laboratory and computer experiments and confirmed finally by renormalized theory. In this class of systems strange attractors, their crises, fractal dimension, Liapunoff exponents show universal behavior as the strength parameter and dissipation is varied. 17 refs.

12886 **(IAE—4094/1) Solitons and theory of representations.** Kulish, P.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700318.

Problems on the theory of group representations finding application in constructing the quantum variant of the inverse scattering problem are discussed. The multicomponent nonlinear Shroedinger equation is considered as a main example of nonlinear evolution equations (NEE). 19 refs.

12887 **(IFVE-OTF—85-133) Relativistic gravitation theory and graviton rest mass.** Logunov, A.A.; Mestvirishvili, M.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700321.

Submitted to the journal Theor. Math. Phys. .

The graviton rest mass m has been introduced. The equations describing a massive gravitational field have been obtained in the framework of the RTG. Assuming the whole "hidden mass" of matter in the Universe to be due to the existence of a massive gravitational field, we obtain the upper bound on m: m < or approximately 0.64 x 10sup(-65) g. 5 refs.

12888 **(IFVE-OTF—85-162) Relativistic theory of gravity.** Logunov, A.A.; Mestvirishvili, M.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 67p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87700322.

This work presents an unambiguous construction of the relativistic theory of gravity (RTG) in the framework of relativity and the geometrization principle. The gauge principle has been formulated, and the Lagrangian density of the gravitational field has thus

been constructed. This theory explains the totality of the available experimental data on the solar system and predicts the existence of gravitational waves of the Faraday-Maxwell type. According to the RTG, the Universe is infinite and "flat", hence it follows that its matter density should be equal to its critical density. Therefore, an appreciable "hidden mass" exceeding the presently observed mass of the matter almost 40-fold should exist in the Universe in some form of the matter or other. In accordance with the RTG, a massive body having a finite density ceases to contract under gravitational forces within a finite interval of proper time. From the viewpoint of an external reference frame, the brightness of the body decreases exponentially (it is getting darker), but nothing extraordinary happens in this case because its density always remains finite and, for example, for a body with the mass of about 10^8 M_0 it is equal to 2 g/cm^3. That is why it follows from the RTG that there could be no object whatsoever (black holes) in which gravitational collapse of matter develops to an infinite density. As has been shown, the presence of a cosmological term necessarily requires the introduction of a term with an explicit dependence on the Minkowski metrics. For the long-range gravitational forces the cosmological constant vanishes. 24 refs.

In JINR rapid commutations. Collection.

In the literature about Inverse Problems there are no tractable methods for construction of nonspherical potentials from the asymptotic wave function. This problem turned out to be solved in special cases. The methods of reconstruction from scattering data are given for the class of potentials admitting the separation of variables in spheroidal coordinates. This is the first case when the agorithms of the inverse problem solution for spherically-nonsymmetrical local potentials can practically be realised. The modifications of the formalisms of Regge-Newton-Sabatier and finite-difference approximation of Hooshyar-Rasavy are considered.

12890 (INIS-SU—365) **JINR rapid commutations. Collection.** (Joint Inst. for Nuclear Research, Dubna (USSR)). 1985. 58p. (In Russian). (N—12-85). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780050.

The individual papers for this meeting have been abstracted separately.

12891 (ITF—85-85-R) **Normal gauge in N=1 supergravity.** Bandos, I.A.; Zima, V.G. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700323.

Normal gauge is fixed on the embedding functions and compensators for all known kinds of N=1 supergravity as well as for its new formulation with auxiliary superfield. As the simplest application the superfield equations of motion for all kinds of simple supergravity are derived by varying the action of the new formulation. Gauges in curved real superspace are considered, too. 24 refs.

12892 (ITF—85-95-R) **Functional determinants and effective action for conformal scalar and spinor fields in external gravitational field.** Bukhbinder, I.L.; Gusynin, V.P.; Fomin, P.I. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700351.

A method for evaluating the functional determinants of some differential operators in quantum field theory is developed. It is shown that the ratios of two determinants for conformally connected metrics and for conformal matter fields are calculated in explicit form. 29 refs.

12893 (JINR—E-4-85-525) **Representations which satisfy identities associated with tensor operators. Second-degree tensor operators which transform under the representations (2ΛY) of so(2n,c) and (Λ_2) of sp(2n,c).** Iosifescu, M.; Scutaru, H. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Institutul Central de Fizica, Bucharest (Romania)). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700317.

In previous works a method has been pointed out for the determination of all polynominal identities which can be satissfied by the generators xsub(i) of representations p of a Lie algebra. These identities are Tsub(σ)sup((k)) (x_1, ..., xsub(n))=0, where Tsub(σ)sup((k)) (x_1, ..., xsub(n)) is a tensor operator transforming under the subrepresentation σ of (ad x k)sub(s). The present work determines the representations p for which Tsub($2\Lambda_1$)sup(2)9(p)=0 for so(2n, c) and Tsub(Λ_3)sup(2(2)) (p)=0 for sp(2n, c). They result from the condition Tsub(σ)sup((2)) (p)vsub(p)=0 (vsub(p)=highest weight vector of p). It is proved that in the first case p=(kΛsub(n-1)) or p=(kΛsub(n)) and that in the second p=(kΛsub(n)). Equations for vsub(p) are also determined. 26 refs.

12894 (JINR—E-4-85-705) **Open quantum system and the damping of collective modes in deep inelastic collisions.** Sandulescu, A.; Scutaru, H. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Institutul Central de Fizica, Bucharest (Romania)). 1985. 44p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700319.

In the framework of the Lindblad theory for open quantum systems the following results are obtained: a generalization of the fundamental constraints on quantum mechanical diffusion coefficients which appear in the corresponding master equations, a generalization of pure state condition and generalized Schrodinger type nonlinear equation for an open system. Also, the Schroedinger, Heisenberfg and Weyl-Wigner-Moyal representations of the Lindblad equation are given explicitly. On the basis of these representations, it is shown that various master equations for the damped quantum oscillator used in the literature for the description of the damped collective modes are particular cases of the Lindblad equation and that the majority of these equations are not satisfying the constraints on quantum mechanical diffusion coefficients. The solutions of the differential equations for the variances are put in a new synthetic for, suggested by a direct computation of the variances from the time dependent Weyl operators. The solution of the Lindblad equation in the Weyl-Wigner-Moyal representation is of Gaussian type if the initial form of the Wigner function is taken to be a Gaussian corresponding to a coherent wave furction. 49 refs.

12895 (UWThPh—86-26) **Stochastic quantization of gravity and string fields.** Rumpf, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700324.

The stochastic quantization method of Parisi and Wu is generalized so as to make it applicable to Einstein's theory of gravitation. The generalization is based on the existence of a preferred metric in field configuration space, involves Ito's calculus, and introduces a complex stochastic process adapted to Lorentzian spacetime. It implies formally the path integral measure of DeWitt, a causual Feynman propagator, and a consistent stochastic perturbation theory. The lineraized version of the theory is also obtained from the stochastic quantization of the free string field theory of Siegel and Zwiebach.

12896 (UWThPh—86-27) **Level comparison theorems and supersymmetric quantum mechanics.** Baumgartner, B.; Grosse, H.; Martin, A. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik; European Organization for Nuclear Research, Geneva (Switzerland)). 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700320.

The sign of the Laplacian of the spherical symmetric potential determines the order of energy levels with the same principal Coulomb quantum number. This recently derived theorem has been generalized, extended and applied to various situations in particle, nuclear and atomic physics. Besides a comparison theorem the essential step was the use of supersymmetric quantum mechanics. Recently worked out applications of supersymmetric quantum mechanics to index problems of Dirac operators are mentioned.

12897 (UWThPh—86-28) **Exact superpartners of N = 2 supergravity solitons.** Aichelburg, P.C.; Embacher, F. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700325.

By applying long-range N = 2 supergauge transformations to the Majumdar-Papapetrou configurations, the set of all superpartners to the bosonic multi-solitons is exhibited. The resulting configuration is parametrized by two additional complex Grassmann numbers. Apart from mass and electric (possibly magnetic) charge it carries a supercharge which is algebraically constrained due to the central charges in the supersymmetry algebra. The supercharge gives rise to an 'intrinsic' angular momentum. Similar to the Kerr metric, the configuration is stationary with an anomalous magnetic moment.

12898 **Quantum Monte Carlo.** Ceperley, D.; Alder, B. (Lawrence Livermore National Lab., CA). *Science (Washington, D.C.);* **231**: 555-560(7 Feb 1986). Contract W-7405-ENG-48.

An outline of a random walk computational method for solving the Schroedinger equation for many interacting particles is given, together with a survey of results achieved so far and of applications that remain to be explored. Monte Carlo simulations can be used to calculate accurately the bulk properties of the light elements hydrogen, helium, and lithium as well as the properties of the isolated atoms and of molecules made up from these elements. It is now possible to make reliable predictions of the behavior of these substances under experimentally difficult conditions, such as high pressure, and of properties that are difficult to measure experimentally, such as the momentum distribution in superfluid helium. For chemical systems, the stochastic method has a number of advantages over the widely used variational approach to determine ground-state properties, namely fast convergence to the exact result within objectively established error bounds. 37 references 4 figures.

12899 **Relationship between supersymmetry and the inverse method in quantum mechanics.** Nieto, M.M. (Los Alamos National Lab., NM). *Physics Letters [Section] B;* **145B**: No. 3-4, 208-210(20 Sep 1984).

In supersymmetric QM the bosonic hamiltonian H/sub +/ = A dagger A yields the fermionic hamiltonian H/sub -/ = AA dagger. However, the most general B/sub λ/ that satisfies B/sub λ/ B/sub λ/ dagger = H/sub -/ yields an H/sub B+/(λ) = B/sub λ/ dagger B/sub λ/ which in general is not H/sub +/. This new hamiltonian can be understood as a special case of the application of the inverse method to H/sub +/ to obtain new hamiltonians, one of which is H/sub B+/(λ). When λ = 0 the new hamiltonian has the original bosonic spectrum but with the ground state removed. 11 references, 1 table.

12900 **Theorem about Hamiltonian systems.** Case, K.M. (Rockefeller Univ., New York, NY). *Proceedings of the National Academy of Sciences of the United States of America;* **81**: 5893-5895(Sep 1984). Contract AC02-81ER10807.

A simple theorem in Hamiltonian mechanics is pointed out. One consequence is a generalization of the classical result that symmetries are generated by Poisson brackets of conserved functionals. General applications are discussed. Special emphasis is given to the Kadomtsev-Petviashvili equation. 5 references.

12901 **Mechanism for the generation of cavitation maxima by pulsed ultrasound.** Flynn, H.G.; Church, C.C. (Univ. of Rochester, NY). *Journal of the Acoustical Society of America;* **76**: No. 2, 505-512(Aug 1984). Contract AC02-76EV03490.

A train of 1-MHz pulses can generate maxima of cavitation activity at pulse lengths of 6 and 60 ms and at pressure amplitudes, P/sub A/, between 5.4 and 9.4 bars (or intensities between 10 and 30 W/cm^2). Generation of maxima at P/sub A/ between these limits on pressure amplitude implies that the increase in cavitation activity originates from gas nuclei with radii lying in a critical size range centered at about 0.08 μm. The mechanism proposed for this phenomenon suggests that nuclei in this critical range are unstabilized nuclei generated in one pulse and surviving to the next with an appreciable fraction of the survivors lying in the critical range. Transient cavities that grow from such small nuclei are shown to behave as isolated mechanical systems that on reaching maximum size collapse as imploding spheres. The maximum pressures reached in such imploding cavities would then approximate those calculated for the spherical collapse of cavities. The occurrence of the observed maxima is ascribed to the spherical collapse of transient cavities. 17 references, 5 figures.

12902 **Polynomial constants for the quantized NLS equation.** Case, K.M. (Rockefeller Univ., New York, NY). *Journal of Mathematical Physics (New York);* **25**: No. 7, 2306-2314(Jul 1984). Contract AC02-81ER10807.

The classical nonlinear Schroedinger equation (NLS) is known to have an infinite number of polynomial constants. While recursion relations to compute these are available, no general expressions in terms of the fields have been found. However, general expressions have been obtained in terms of the reflection coefficients. When one turns to the quantum case where the fields become operators with conventional commutation relations, the polynomials with suitable ordering are still constants. The classical expression for the constants in terms of the reflection coefficients strongly suggests what the quantum form should be. This conjecture is proved for the repulsive case. The expression is significantly simpler than the classical one. It is I/sub n/ = (1/2 π) integral/sub ∞//sup ∞/ (k)/sup n/ R *(k) R (k)dk. 6 references.

12903 **Abstract kinetic equations relevant to supercritical media.** Greenberg, W.; van der Mee, C.V.M. (Universita degli Studi di Firenze, Florenze, Italy). *Journal of Functional Analysis;* **57**: No. 2, 111-142(15 Jun 1984). Contract AS05-80ER10711.

The abstract Hilbert space equation is studied with a partial range boundary condition. This models half-space stationary transport problems in supercritical media. A complete existence and uniqueness theory is developed. 35 references.

12904 **Analysis of a multigrid method as an iterative technique for solving linear systems.** Greenbaum, A. (Lawrence Livermore National Lab., CA). *SIAM (Society for Industrial and Applied Mathematics) Journal on Numerical Analysis;* **21**: No. 3, 473-485(Jun 1984). Contract W-7405-ENG-48.

A general class of iterative methods is introduced for solving symmetric, positive definite linear systems. These methods use two different approximations to the inverse of the matrix of the problem, one of which involves the inverse of a smaller matrix. It is shown that the methods of this class reduce the error by a constant factor at each step and that under ideal circumstances this constant is equal to (k' - 1)/(k' + 1), where k' is the ratio of the largest eigenvalue to the (J + 1)st eigenvalue of the matrix, J being the dimension of the smaller matrix involved. A multigrid method is presented as an example of a method of this class, and it is shown that while the multigrid method does not quite achieve this optimal rate of convergence, it does reduce the error at each step by a constant factor independent of the mesh spacing h. The size of this constant factor and properties of the differential equation and the discretization that affect it are also discussed. 5 references, 1 table.

12905 **Logarithmic perturbation expansions in nonrelativistic quantum mechanics.** Imbo, T.; Sukhatme, U. (Univ. of Illinois, Chicago). *American Journal of Physics;* **52**: No. 2, 140-146(Feb 1984). Contract AC02-83ER40110.

The authors discuss an alternative method of performing coupling constant perturbation expansions in nonrelativistic quantum mechanics. This method, called logarithmic perturbation theory, yields new expressions for any-order corrections E/sub n/ to an unperturbed bound-state energy which do not involve cumbersome sums over intermediate unperturbed states. In one dimension, these corrections E/sub n/ can be evaluated using a simple explicit form containing a small number of integrals. In more than one dimension the approach is systematic but computations require the solution of well-defined partial differential equations. For order n = 2 this equation is identical to that appearing in the method of Dalgarno and Lewis. Numerous illustrative examples are presented. 5 references.

12906 **Stochastic analysis of explosive behavior: a qualitative approach.** Frankowicz, M.; Mansour, M.M.; Nicolis, G. (Universite Libre de Bruxelles, Belgium). *Physica A (Amsterdam);* **125A**: 237-246(1984). Contract AS05-81ER10947.

In many instances, the evolution of physico-chemical systems involves a long slow induction period followed by an abrupt switching to a final stable attractor. In the present paper the properties of fluctuations during this explosive stage of evolution are analyzed. Qualitative arguments, confirmed by an exactly soluble model, establish that this regime is characterized by the development of long tails and multiple humps in the probability distribution. The implications of this phenomenon of transient bimodality are discussed. 12 references, 3 figures.

12907 **Stationary transport processes with unbounded collision operators.** Greenberg, W.; Van Der Mee, C.V.M. (Universita degli Studi di Firenze, Italy). *Letters in Mathematical Physics;* 8: 7-12(1984). Contract AS05-80ER10711.

An abstract Hilbert space equation is studied, which models many of the stationary, one-dimensional transport equations with partial-range boundary conditions. In particular, the collision term may be unbounded and nondissipative. A complete existence and uniqueness theory is presented. 18 references.

12908 **Models of disordered media: some new results, including some new connections between composite-media, fluid-state, and random-flight theories.** Stell, G. (State Univ. of New York, NY). pp 347-369 of Lecture notes in mathematics. Dold, A.; Eckmann, B. (eds.). New York, NY; Springer-Verlag (1983).

Some new theoretical results on the microstructure of models of two-phase disordered media are given, as well as the new quantitative bounds on the thermal conductivity that follows for one such model (randomly centered spherical inclusions). A second set of results is then given for random flights, including random flights with hit expectancy prescribed in a unit hall around the flight origin. Finally, some interesting correspondences are demonstrated, via the Ornstein-Zernike equation, between random-flight results, liquid-state results and percolation-theory results. 27 references, 6 figures, 4 tables.

12910 (CONF-8510176—, pp 24-29) **New Hamiltonian methods in gyrokinetic plasma theory.** Frieman, E.A.; Hagan, W.K. (Science Applications International Corp., La Jolla, CA). 1985. NTIS, PC A13/MF A01. File Number DE86005973.

From 3. symposium on energy engineering sciences: thermofluids and solid mechanics; University Park, PA, USA (8 Oct 1985).

The application of the direct interaction approximation (DIA) to turbulent systems in which multi-time and -space scales exist is discussed. These different scales can be exploited to perform an asymptotic expansion of the dynamical governing equations prior to the application of the DIA. Based on a cursory examination of the Navier-Stokes equation, it is conjectured that such an approach may resolve some of the problems associated with the DIA. The problem of anomalous transport in tokamak fusion plasmas is another example of a problem which might benefit from such an approach. A new Hamiltonian method for deriving the nonlinear gyrokinetic equations which govern this system is discussed and shown to resolve many of the issues introduced by the recent application of Hamiltonian methods to this problem. This is followed by a reformulation of the DIA for systems in which there are two governing equations, instead of the usual one.

12911 **(DOE/ER/53161—1) Theoretical study of the trapping of relativistic electron beams in tokamaks for current drive: Final scientific report, 1 September 1983-1 August 1984.** Kusse, B.R.; Lovelace, R.V.E. (Cornell Univ., Ithaca, NY (USA)). [1985]. Contract AC02-83ER53161. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003358.

During this contract period we have addressed two areas of merging and trapping by looking at magnetic reconnection and equilibrium. Magnetic reconnection must occur if the beam and plasma channel are to merge. This reconnection can be driven by the self attraction of the beam and plasma current channels or a combination of the self attraction and an externally driving coal as was done in the Cornell experiments. The reconnection time will obviously play a large role in determining the time it takes for the electron beam particles to reach the minor axis. Sustained trapping of the beam particles depends upon establishing a stable equilibrium configuration in which the electron distribution has a high energy component.

12912 **(DOE/ER/53196—T5) Rf effects on plasma stability: Final report.** Krall, N.A. (JAYCOR, San Diego, CA (USA)). Dec 1986. Contract AC03-85ER53196. 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004130.

A program of study on the effect of high frequency waves on low frequency stability of plasma was concluded. The inclusion of electromagnetic modes completed the survey of mode types and wave number geometry, and a calculation in cylindrical geometry validated the slab model calculations. Application of the method to drift and trapped particle instabilities confirmed the relevance of rf processes to tokamaks and ionospheric plasmas, in addition to the mirror devices for which they were originally explored.

12913 **(DOE/ER/53211—122) Advanced development of particle beam probe diagnostic systems: Technical progress report covering the period 10 December 1985-30 November 1986.** Hickok, R.L.; Jennings, W.C.; Connor, K.A.; Crowley, T.P. (Rensselaer Polytechnic Inst., Troy, NY (USA)). Dec 1986. Contract FG02-85ER53211. 13p. NTIS MF A01; 2; GPO Dep. File Number DE87003572.

During the period covered by this report, significant progress was made in: (1) Demonstrating fast continuous T/sub e/ measurements by simultaneous observations of both 2^+ and 3^+ secondary ions. (2) Improving the techniques for simultaneous measurements of the k and ω spectra for both n-tilde and phi-tilde. (3) Developing new procedures for processing fluctuation data that improves the extraction of weak coherent signals in the presence of strong wideband fluctuations. (4) Identifying both the capabilities and the necessary technological development required to implement beam probes or reactor size systems, and (5) improving the technology of present day systems.

12914 **(DOE/ER/53223—17) Self-excitation of the ballooning tearing mode and the nature of anomalous transport in toroidal magnetic confinement systems.** Zakharov, L.E.; Riedel, K.S. (New York Univ., NY (USA). Courant Inst. of Mathematical Sciences). Aug 1986. Contract FG02-86ER53223. 19p. (MF—111). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003419.

The self-excitation of the ballooning tearing mode in toroidal systems with strong magnetic fields is discovered. This instability is driven by the pressure gradient at small islands and arises from the coupling of poloidal harmonics. This instability is always unstable with respect to perturbations of finite size. In our opinion, it is the main mechanism for plasma turbulence and therefore defines the energy confinement time in tokamaks and stellarators.

12915 **(DOE/ER/53227—99) Trapping of gun-injected plasma by a tokamak.** Leonard, A.W.; Dexter, R.N.; Sprott, J.C. (Wisconsin Univ., Madison (USA). Dept. of Physics). Oct 1986. Contract FG02-86ER53227. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004147.

It is shown that a plasma produced by a Marshall gun can be injected into and trapped by a tokamak plasma. Gun injection raises the line-averaged density and peaks the density profile. Trapping of the gun-injected plasma is explainable in terms of a depolarization current mechanism. A model is developed which describes the slowing of a plasma beam crossing into the magnetic field of a tokamak. The slowing down time is shown to go as tau/sub s/ $\propto$ n^{-1}/sub b/T^{3}/sub e/$(a_0/L)^{2}$, where n/sub b/ and T/sub e/ are the density and temperature of the plasma beam and a_0/L is the pitch of the field lines per unit length in the direction in which the beam is traveling. Experimental tests of this model are consistent with the scaling predictions.

12916 **(DOE/ER/53227—100) The trapping of a gun-injected plasma by a tokamak.** Leonard, A.W. (Wisconsin Univ., Madison (USA). Dept. of Physics). Oct 1986. Contract FG02-86ER53227. 101p. NTIS, PC A06/MF A01. File Number DE87004146.

A Marshall gun was used to refuel a tokamak discharge on the Tokapole II device. Gun injection was able to increase the line-averaged density of the discharge by 50%. The density profile became more peaked due to gun injection. A model is discussed which describes the trapping of a gun injected plasma in a pure octupole field, due to a depolarization current. This model is expanded to include arbitrary toroidal fields added to the poloidal field. A slowing time, tau/sub s/, is derived for the trapping of an injected plasma of density n/sub b/, and temperature, T/sub e/, into poloidal field, B/sub p/ and toroidal field, B/sub t/. The experiment is extended to the tokamak discharge by the addition of plasma density and current to the vacuum fields, B/sub p/ and B/sub t/. Plasma density is seen to not significantly affect trapping. The increase in trapping with plasma current is explained in terms of additional poloidal field added to the central current channel. An extrapolation is made of the refueling system to the reactor-size tokamak TFTR. An effective system seems easily obtainable.

12917 **(DOE/ET/53193—6) Heating and current-drive with high phase velocity compressional Alfven waves.** Li, Y.M.; Mahajan, S.M.; Ross, D.W. (Texas Univ., Austin (USA). Fusion Research Center). Dec 1986. Contract AC05-76ET53036;AS05-85ER53193. 33p. (FRC—293). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004317.

It is shown that high phase velocity compressional Alfven waves have the desirable features needed for efficient current drive in fusion-reactor-like conditions; the energy deposition is low on the α-particles, and high on the hot electrons in the plasma interior.

12918 **(GTFR—67) Analysis of neutral beam driven impurity flow reversal in PLT.** Malik, M.A.; Stacey, W.M. Jr.; Thomas, C.E. (Georgia Inst. of Tech., Atlanta (USA). Fusion Research Center). Oct 1986. Contract AS05-78ET52025. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003565.

The Stacey-Sigmar impurity transport theory for tokamak plasmas is applied to the analysis of experimental data from the PLT tokamak with a tungsten limiter. The drag term, which is a central piece in the theory, is evaluated from the recently developed gyroviscous theory for radial momentum transfer. An effort is made to base the modeling of the experiment on measured quantities. Where measured data is not available, recourse is made to extrapolation or numerical modeling. The theoretical and the experimental tungsten fluxes are shown to agree very closely within the uncertainties of the experimental data.

12919 **(IAE—4051/16) Computer code for calculating tearing instability in a tokamak.** Chudnovskij, A.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700358.

A code for modelling of mutual effect of transport processes and tearing instability in a tokamak is described. Equations and formulae of the tearing-mode dynamics are presented. Peculiarities of software are described. Calculations have shown the correspondance of calculated tearing mode with experimental regimes and developed magnetic hydrodynamic activity. An example of calculation results output on curve plotter is presented. 16 refs.; 5 figs.

12920 **(IAE—4089/7) Energy confinement in a plasma of the T-13 tokamak under variation of plasma filament large radius.** Abramov, A.V.; Belashov, V.I.; Bortnikov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700353.

Investigation results of the dependence of energy confinement time tau in elctron component of the plasma filament on large radius R at joule heating of plasma in T-13 tokamak are presented. Small filament radius is a<=8.5 sm, large radius changed within the range of 46<=R<=81 sm. tau dependence on R has not been found in given experiments. The obtained tau value has been compared with a number of known scalings for confinement time. 9 refs.; 8 figs.

12921 **(IAE—4100/7) Diagnostics of ultrasoft X radiation of a dense thermonuclear plasma by means of vacuum photoemission detectors.** Aranchuk, L.E.; Bogolyubskij, S.L.; Tel'kovskaya, O.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700355.

Diagnostics, designed for investigating dense plasma radiation in the spectrum region of 0.01 keV <= E < 10 keV, is described. Design and characteristics of vacuum photoemission detectors, used for plasma X radiation detection, are described. The measurement results of absolute energy spectra of plasma channel radiation are given, the channels being formed during explosion of thin wires in the diode of a heavy-current generator. 14 refs.; 10 figs.; 2 tabs.

12922 **(IAE—4130/6) Simulation of collective transfer in a toroidal plasma.** Gribkov, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 32p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700359.

Plasma drift in magnetic configurations with the separatrix is considered. Drift patterns and the coefficient of plasma diffusion in such configurations are calculated. Estimation of transfer coefficients and their comparison with the results of a local theory are carried out. The equation for small nonpotential oscillations of dissipative balloon modes is solved. The balloon modes at finite conductivity are shown to lead to pseudoclassical transfers. A nonlinear model of fishbone oscillations is simulated; it reflects main qualitative features of the phenomenon observed during the experiment. 27 refs.; 16 figs.

12923 **(INPE—3810) Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency.** Shibata, C.S.; Montes, A. (Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)). Feb 1986. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700360.

The accessibility of electron frequency range electromagnetic waves in magnetized inhomogeneous tokamak plasmas is studied using the cold plasma model. Simple equations for cutoff and resonance surfaces are obtained for parabolic density profile plasma. Using cartesian coordinates in the poloidal cross section of the tokamak, these equations are arranged in a convenient standard form, in order to facilitate the plotting of the various surfaces simultaneously. Graphical outputs for several cases are presented, together with the principal cutoff and resonance frequency profiles along the minor radius.

12924 **(INPE—3914) Steady state behavior of rotating plasmas in a vacuum-arc centrifuge.** Bittencourt, J.A.; Ludwig, G.O. (Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)). Jun 1986. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700357.

The steady state behavior of the fully ionized, multiple species, rotating, magnetized plasma in a vacuum-arc plasma centrifuge

is described in detail. The analysis is based on a multiple species fluid model which includes electromagnetic, pressure gradient, centrifugal and collisional forces, for each species, in cylindrical geometry. It is shown that there is a family of theoretically possible dynamical equilibrium configurations, which can be achieved by different combinations of ion rotation velocity, radial ion density distribution and radial dependence of internal electric potential. The parametric dependences of the various plasma parameters under equilibrium conditions, including the ion separation factor, are presented for a nickel-copper plasma. The numerical results are analysed and discussed on light of experimentally measured plasma characteristics in a vacuum-arc plasma centrifuge.

12925 **(ISL-R—07/85) Stationary, one-dimensional models for laser-produced plasmas.** Daree, K. (Institut Franco-Allemand de Recherches de Saint-Louis, 68 (France)). Jun 1985. 134p. (In German). (ETN—86-97623). NTIS, PC A07/MF A01.

One-dimensional, stationary models for laser-produced plasmas were compared. The most interesting models seem to be those with the assumption of a self regulation of the plasma, i.e., based on the defined geometrical dimensions of the plasma. Such a model was numerically evaluated for a parallel flow, whereby the physical effects partial ionization, laser light absorption, and heat conduction were taken into account. The effect of several parameters (e.g., laser beam intensity, laser wavelength) on the calculation results is discussed. The calculation results agree very satisfactorily with experimental results.

12926 **(ITEF—33-1985) Some problems of data interpretation of time-of-flight mass spectrometry of laser plasma.** Latyshev, S.V.; Rudskoj, I.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700356.

Expansion of laser plasma in vacuum is theoretically investigated. A new assessment of the value of recombination heating bringing about quantitative agreement of the theoretical model with results of time-of-flight mass-spectrometry of laser plasma is suggested. 23 refs.; 3 figs.

12927 **(ITF—85-52-R) Nonlinear electromagnetic wave interaction in a plasma-molecular medium bounded by a spherical surface.** Zagorodnij, A.G.; Nazarenko, L.A.; Shevchenko, A.Yu.; Yakimenko, I.P. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700361.

Nonlinear effects, when plane waves falling on a plasma-molecular medium bounded by a spherical surface, are investigated in the approximation of the given current. General relations for nonlinear electromagnetic field sources are presented. The solution of an electrodynamic problem of plasma-molecular sphere excitation by point dipole placed in the external region is given. Electromagnetic fields, generating due to nonlinear interaction of two plane waves, are calculated by means of the above solution and on the base of a reciprocity theorem. Numerical analysis of energy characteristics of such fields is performed, and total peculiarities of their angular and frequency distributions are established on its base. 22 refs.; 6 figs.

12928 **(KFTI—85-10) On the peculiarities of SHF radiation absorption under the electron-cyclotron method of creation of stationary plasma in stellarator Saturn.** Vasil'ev, M.P.; Kulaga, A.E.; Kuleshov, I.E.; Perepelkin, N.F.; Vojtsenya, V.S.; Voloshko, A.Yu.; Solodovchenko, S.I.; Shtan', A.F. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR); AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1985. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700354.

Peculiarities of absorption of low-power 3-centimeter wave during stationary SHF plasma heating are studied in the triple toroidal stellarator, called "Saturn". Presence of the cyclotron absorption zone into the volume of closed magnetic surfaces creates nonsymmetrical radial distributions of plasma parameters and fluxes of accelerated particles in the torr plane on both from the zone. In the cyclotron zone 1-2 mm wide electron temperature is 5-6 times higher than its mean value in the remaining filament part. The density gradient is directed out the torr, where density is twice higher than that incide the torr in front of the cyclotron zone. Intensive SHF noises in plasma at cyclotron frequencies, which spectrum wiedening was determined by toroidal magnetic field inhomogeneity, were excited behind the zone in the region of the weak field 5-6 mm wide. Intensive ion plasma noises are discovered in the ECR zone and in its vicinity. Two-temperature form of the function of energy particle distribution and oscillation spectra in plasma permit to assume the turbulent plasma SHF-heating in the resonance zone due to parametric instability development. Heavy instability of noises excited in plasma may be indicative of a relaxation character of the process of SHF pumping wave absorption in the ECR zone. 13 refs.; 27 figs.

12929 **(LRP—304/86) Finite elements applied to plasma waves.** Appert, K.; Succi, S.; Vaclavik, J.; Villard, L. (Centre de Recherches en Physique des Plasmas, Lausanne (Switzerland)). Sep 1986. 31p. (CONF-8609213—1). NTIS (US Sales Only), PC A03/MF A01. File Number DE87900205.

From 1. advanced summer school on finite elements in physics; Lausanne, Switzerland (1 Sep 1986).

An introduction is given into two subjects of the theory of plasma waves and their numerical treatment with the finite element method: Linear propagation in an inhomogeneous medium and quasilinear theory. It is attempted to present the two subjects in such a way that the knowledge of plasma physics is not a prerequisite. With the information contained here a non-specialist should be able to appreciate at least the numerical part of the specialized research papers devoted to the subjects.

12930 **(ORNL/TM—9494) An experimental determination of the hot electron ring geometry in a Bumpy Torus and its implications for Bumpy Torus stability.** Hillis, D.L.; Wilgen, J.B.; Bigelow, T.S.; Jaeger, E/F.; Swain, D.W.; Hankins, O.E.; Juhala, R.E. (Oak Ridge National Lab., TN (USA)). Oct 1986. Contract AC05-84OR21400. 40p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87004048.

The hot electron rings of the ELMO Bumpy Torus (EBT) [Plasma Physics and Controlled Nuclear Fusion (IAEA, Vienna, 1975), Vol. II, p. 141] are formed by electron cyclotron resonance heating (ECRH) and have an electron temperature of 350 to 500 keV. The original intention of these hot electron rings was to provide a local minimum in the magnetic field and, thereby, stabilize the simple interchange and flute modes, which are inherent in a closed field line bumpy torus. To evaluate the electron energy density of the EBT rings and determine if enough stored energy is present to provide a local minimum in the magnetic field, a detailed understanding of the spatial distribution of the rings is imperative. The purpose of this report is to measure the ring thickness and investigate its implications for bumpy torus stability. The spatial location and radial profile of the hot electron ring are measured with a unique metal ball pellet injector, which injects small metallic balls into the EBT ring plasma. From these measurements the radial extent (or ring thickness) is about 5 to 7 cm full width at half maximum for typical EBT operation, which is much larger than previously expected. These measurements and recent modeling of the EBT plasma indicate that the hot electron ring's stored energy may not be sufficient to produce a local minimum in the magnetic field.

12931 **(PPPL—2401) Theory of current-drive in plasmas.** Fisch, N.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Dec 1986. 154p. NTIS, PC A08/MF A01. File Number DE87004047.

The continuous operation of a tokamak fusion reactor requires, among other things, a means of providing continuous toroidal current. Such operation is preferred to the conventional pulsed operation, where the plasma current is induced by a time-varying magnetic field. A variety of methods has been proposed to provide continuous current, including methods which utilize particle beams or radio frequency waves in any of several frequency regimes. Cur-

rents as large as half a mega-amp have now been produced in the laboratory by such means, and experimentation in these techniques has now involved major tokamak facilities worldwide.

12932 **(UCRL—95790) Kinetic theory of the interdiffusion coefficient in dense plasmas.** Boercker, D.B. (Lawrence Livermore National Lab., CA (USA)). Aug 1986. Contract W-7405-ENG-48. 12p. (CONF-860864—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003439.

From Meeting on strongly coupled plasma physics; Santa Cruz, CA, USA (4 Aug 1986).

Naive applications of Spitzer's theory to very dense plasmas can lead to negative diffusion coefficients. The interdiffusion coefficients in Binary Ionic Mixtures (two species of point ions in a uniform neutralizing background) have been calculated recently using molecular dynamics techniques. These calculations can provide useful benchmarks for theoretical evaluations of the diffusion coefficient in dense plasma mixtures. This paper gives a brief description of a kinetic theoretic approximation to the diffusion coefficient which generalizes Spitzer to high density and is in excellent agreement with the computer simulations. 15 refs., 1 fig., 2 tabs.

12933 **VUV study of impurity generation during ICRF heating experiments on the Alcator C tokamak.** Manning, H.L. Jr. Cambridge, MA; Harvard Univ. (1986). 223p. University Microfilms Order No. 86-20,506.

Thesis (Ph. D.).

A 2.2 m grazing incidence VUV monochromator was converted into a time resolving spectrograph by the addition of a new detector system, based on a microchannel plate image intensifier linked to a 1024-element linear photodiode array. The system covers the wavelength range 15 to 1200 A (typically 40 A at a time) with resolution of up to 0.3 A FWHM. Time resolution is selectable down to 0.5 msec. The system sensitivity was absolutely calibrated below 150 A by a soft X-ray calibration facility. The spectrograph was installed on the Alcator C tokamak at MIT to monitor plasma impurity emission. There, cross-calibration with a calibrated EUV monochromator was performed above 400 A. Calibration results, system performance characteristics, and data from Alcator C are presented. Observations of impurity behavior are presented from a series of ICRF heating experiments (180 MHz, 50-400 kW) performed on the Alcator C tokamak, using graphite limiters and stainless steel antenna Faraday shields. Large increases in metal impurity levels were seen during the RF pulse, with iron increasing by a factor of 12 at the highest RF powers. Much similar increases in carbon and oxygen were seen. Potential impurity sources and release mechanisms are discussed.

12934 **Numerical studies on the sustainment of the axial magnetic field in a reversed field pinch using a square cross section.** Odeh, I.M. Lafayette, IN; Purdue Univ. (1986). 229p. University Microfilms Order No. 86-22,201.

Thesis (Ph. D.).

A computational study of the three dimensional nonlinear resistive MHD equations for a straight cylinder is presented. The studies are applied to self-production of the an axial magnetic field, the so-called alpha effect in the reversed field pinch. The resistive MHD equations are solved by potentials that allow the resistive MHD equations are solved by potentials that allow the poloidal and toroidal symmetry of the magnetic and velocity fields to be exploited. The MHD steady state is allowed to change on a resistive time scale and solved numerically. This state is independent on z and allows the introduction of a flux function as an independent variable. The resistive MHD equations are Fourier analyzed along the ignorable coordinate of the equilibrium. Two different codes are developed. The first code is for an incompressible plasma with a specific mode number along the z axis as an approximation. Finite difference methods are employed on the x and y variables. For the incompressible case, the calculation is carried out for two spatial variations of the resistivity. The first spatial variation of the resistivity is uniform, while the second case is characterized by a sharp increase towards the wall. The second code is for three dimensional compressible MHD of constant resistivity. The simulation of the incompressible case of variable resistivity shows the production of the alpha effect, while the constant resistivity case shows the absence of the alpha effect. The simulation of the three dimensional case shows the production of the axial field.

12935 **Gyrotron: an application of the relativistic bunching of electrons to the generation of intense millimeter microwave radiation.** Caplan, M. Los Angeles, CA; Univ. of California (1986). 342p. University Microfilms Order No. 86-21,035.

Thesis (Ph. D.).

The cyclotron maser or gyrotron is capable of generating high power microwaves at millimeter wave frequencies for applications in fusion heating, radar astronomy and communications. Analytic and numerical simulation models are developed that describe the behavior of these devices under realistic laboratory conditions including the effects of circuit geometry, beam thermal spread, and mode competition. In Chapter 2, a generalized linear theory for the gyrotron is presented in the form of an integro-differential equation that can be solved within various circuit geometries thus describing gyro-amplifiers, gyro-oscillatory and gyroklystrons. In Chapter 3 a complete description of a finite size electromagnetic particle simulation model is presented that describes gyrotrons operating in a TE/sub mn/ waveguide mode. In Chapter 4 simulations and theoretical analysis are made of gyrotron amplifiers operating in the TE/sub 01/ mode. In Chapter 5 the linear eigenmodes and eigenfrequencies of gyrotron oscillators are examined. In Chapter 6 the experimental development of a GHz gyrotron is presented. Theoretical and numerical predictions of oscillation thresholds and efficiencies compare favorably with experimental data.

12936 **Alpha particle density and energy distributions in tandem mirrors using Monte-Carlo techniques.** Kerns, J.A. Troy, NY; Rensselaer Polytechnic Institute (1986). 221p. University Microfilms Order No. 86-19,986.

Thesis (Ph. D.).

Alpha particles, born at 3.52 MeV, are used to maintain the ignition temperatures in a deuterium-tritium (D-T) reacting plasma above 10 keV in tandem mirror reactors. The alpha energy is transferred to the plasma by Coulomb collisions and, after thermalization, the alphas can accumulate in the plasma and quench the reaction. The author simulated the alpha thermalization process using a Monte Carlo technique in which the alpha guiding center is followed between simulated collisions, and Spitzer's collision model is used for the alpha-plasma interaction. Monte-Carlo techniques are used to determine the alpha radial birth position, the alpha particle position at a collision, and the angle scatter and dispersion at a collision. The plasma is modeled as a hot reacting core, surrounded by a cold halo plasma ($T \sim 50$ eV). Alpha orbits that intersect the halo loose 90% of their energy to the halo electrons because of the halo drag, which is ten times greater than the drag in the core. The uneven drag across the alpha orbit also produces an outward, radial, guiding center drift. This drag drift is dependent on the plasma density and temperature radial profiles. The author modeled these profiles and have specifically studied a single-scale-length model.

12937 **Linear and nonlinear response of ion acoustic waves driven by optical mixing.** Pawley, C.J. Los Angeles, CA; Univ. of California (1986). 235p. University Microfilms Order No. 86-21,120.

Thesis (Ph. D.).

Growth and saturation of ion acoustic waves driven by two 3.3 GHz microwave pumps via optical mixing is examined both theoretically and experimentally. Two computer models are developed from the relations established through solving the Maxwell-Vlasov equations and are compared with experimental data. The models were extended to include inverse Bremsstrahlung absorption, generation of ion acoustic wave harmonics, formation of a hot ion tail distribution, and change of action potential (depletion of the highest frequency pump). Saturation of the ion acoustic wave is experimentally demonstrated and the major saturation mechanism is found to be the formation of a hot ion tail distribution. The first experimental evidence of pump depletion in an optical mixing experiment is shown, which becomes an important saturation mechanism for higher density plasmas (greater than one fourth of the critical density). These results are then compared to stimulated Brillouin scattering experiments.

12938 **Submillimeter wave propagation in tokamak plasmas.** Ma, C.H.; Hutchinson, D.P.; Staats, P.A.; Vander Sluis, K.L.; Mansfield, D.K.; Park, H.; Johnson, L.C. (Oak Ridge National Lab., TN). *Space Solar Power Review;* 6: No. 3, 221-224(1986). Contract AC05-84OR21400.

From 1985 International symposium on antennas and propagation (ISAP'85); Kyoto, Japan (20-22 Aug 1985).

Propagation of submillimeter waves (smm) in tokamak plasma was investigated both theoretically and experimentally to ensure successful measurements of electron density and plasma current distributions in tokamak devices. Theoretical analyses were carried out to study the polarization of the smm waves in TFTR and ISX-B tokamaks. A multichord smm wave interferometer/polarimeter system was employed to simultaneously measure the line electron density and poloidal field-induced Faraday rotation in the ISX-B tokamak. The experimental study on TFTR is under way. Computer codes were developed and have been used to study the wave propagation and to reconstruct the distributions of plasma current and density from the measured data. The results are compared with other measurements. 5 references, 2 figures.

7002 Fusion Power Plant Technology

REFER ALSO TO CITATION(S) 11638, 11999, 12168

12939 **(AAEC/E—629) Variation of neutron yield from a titanium-tritide target during deuterium beam bombardment.** Dalton, A.W.; Woodley, H.J. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). May 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700362.

In the laboratory simulation of D-T fusion breeder blankets, 14 MeV neutrons are produced by the bombardment of a titanium-tritide target with deuterium ions, using accelerating voltages up to 500 keV and beam currents ranging from micro to milliamperes. For the accurate determination of tritium breeding ratios in the experimental assemblies, an absolute determination of the total neutron yield over the irradiation period is required. The theoretical and experimental methods used to determine the ion composition of the deuterium beam, the changing absolute yields, and energy distributions of the neutrons emitted from the target during prolonged irradiation are described, using the AAEC 14 MeV neutron generator as a typical example. Analysis of the measured data identified two ion species in the beam of the neutron generator. It was shown that after a 21-hour irradiation of the target with a 250 μA beam (18.5C) at 200 kV, the neutron output from the D-T reaction dropped from an initial value of 2×10^{10} to 4×10^{8} neutrons per second. The integrated neutron output over this period was estimated to be 2.05×10^{14}, of which about 24 per cent originated from the interaction of monatomic ions and 75 per cent from diatomic ions; less than one per cent arose from D-D reaction.

12940 **(AD-A—172612/4/XAB) Use of incoherence to produce smooth and controllable irradiation profiles with KrF fusion lasers. Memorandum report.** Lehmberg, R.H.; Goldhar, J. (Naval Research Lab., Washington, DC (USA)). 14 Aug 1986. 21p. (NRL-MR—5829). NTIS, PC A02/MF A01.

A technique called Echelon Free Induced Spatial Incoherence, is proposed for producing smooth, controllable target beam profiles with large KrF fusion lasers. The idea is basically an image-projection technique that projects the desired time-averaged spatial profile F(x) onto the target via the laser system, using partially-coherent broadband light. The information needed to reproduce F(x) is transported through the system by a multitude of independent coherence zones, whose diameters are small in comparison to scale length of linear aberration and gain nonuniformities; as a result, F(x) remains relatively insensitive to these effects. This concept is closely related to the Induced Spatial Incoherence (ISI) technique used with glass lasers, except that it does not require echelons at the output of the system. An analysis is carried out to evaluate the perturbations of F(x) due to linear aberration, self-focusing, gain saturation, and diffraction. It shows that under conditions applicable to large KrF lasers, the perturbations will result in a small broadening and smoothing of F(x), whose functional form should be controllable to within a few percent. The ability of this technique to generate smooth focal profiles is demonstrated using a small KrF discharge oscillator preamplifier system.

12941 **(AD-A—172649/6/XAB) Control of ion-velocity distributions in laser-target interaction experiments. Memorandum report.** Grun, J.; Stellingwerf, R.; Ripin, B.H. (Mission Research Corp., Albuquerque, NM (USA)). 6 Oct 1986. 20p. NTIS, PC A02/MF A01.

The width of ion velocity distributions from laser-produced plasmas can be controlled experimentally by varying the size of the laser spot. The ion velocity width is determined primarily by whether the ions are mostly in the rarefraction or steady-state regime. It is not dominated by the thermal distribution of the ions, as is often assumed.

12942 **(AD-A—172945/8/XAB) Application of laser saturation to the efficient generation of short-wavelength radiation from plasmas. Final report, 1 November 1984-31 October 1985.** Measures, R.M. (Toronto Univ., Ontario (Canada). Inst. for Aerospace Studies). May 1986. 136p. NTIS, PC A07/MF A01.

Resonant laser pumping of transitions within atoms or ions represents a powerful mode of coupling laser energy into a gas or plasma. In the case of laser saturation of a resonance transition, rapid heating of the free electrons by superelastic collision quenching of the laser-pumped state has been shown to play the central role in this process. The author developed a computer code that models this laser ionization based on resonance saturation (LIBORS) and permits mapping the three-dimensional nature of this complex interaction. He was able to show, by comparison with experiment, that this LIBORS computer code can predict the radial and axial electron density and temperature profiles of the plasma formed along the path of the laser pulse. These experimental results in themselves represent the first detailed measurements of a sodium plasma created by laser resonance saturation and reveal the importance of laser attenuation in the formation of the plasma. We have also shown that both one and two photon resonant laser pumping of a cold, unexcited plasma created by two photon ionization of strontium vapor can lead to rapid excitation of high lying states of the strontium ion. Lastly, we have demonstrated parametric generation within this same strontium plasma when the laser is tuned close to a two-photon transition of the ion.

12943 (BNL—52006, pp 137-140) **Predominance of the bronze-processed compound superconductors.** Tanaka, H. (Furukawa Electric Co., Ltd., Tokyo, Japan). 1986. NTIS, PC A15/MF A01. File Number DE87001456. (CONF-860583—).

From International Committee for Future Accelerators workshop on superconducting magnets and cryogenics; Upton, NY, USA (12 May 1986).

Various processes of the superconducting compound materials are reviewed in view of their probability in large scale manufacture. Recent improvements in superconducting properties and problems in the applications of the compound conductors for magnets are also discussed. It appears that the bronze-processed Nb_3Sn and V_3Ga to be in a prominent position in practical compound superconductors.

12944 **(CONF-860917—12-Vugraphs) The compact ignition tokamak: an overview.** Flanagan, C.A. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87001686.

From 14. SOFT - symposium on fusion technology; Avignon, France (8 Sep 1986).

Viewgraphs of CIT design efforts are given. (MOW)

12945 **(CONF-861019—17) Pumping of hydrocarbons using non-evaporable getters.** Emerson, L.C.; Knize, R.J.; Cecchi, J.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). 1986. Contract AC02-76CH03073;AC05-84OR21400. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87002181.

From 10. international vacuum congress and 6. international conference on solid surfaces and the 33. national symposium of the American Vacuum Society; Baltimore, MD, USA (27 Oct 1986).

Pumping speed measurements have been obtained for a number of gaseous hydrocarbons including members of the alkene, alkadiene, and cycloalkane groups as a function of temperature using a Zr-Al alloy getter. Pumping speeds were obtained by analysis of an exponential least squares fit to the pressure decay curve following introduction of each gas. It was found that these pumping speeds are relatively high (up to 400 l/s) and exhibit, with only a few exceptions, little temperature dependence. This is in contrast to the earlier reported results for the alkane series.

12946 (CONF-861196—1) High-throughput continuous cryopump. Foster, C.A. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.). 1986. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87000396.

From 28. annual meeting of the American Vacuum Society; Baltimore, MD, USA (3 Nov 1986).

A cryopump with a unique method of regeneration which allows continuous operation at high throughput has been constructed and tested. Deuterium was pumped continuously at a throughput of 30 Torr.L/s at a speed of 2000 L/s and a compression ratio of 200. Argon was pumped at a throughput of 60 Torr.L/s at a speed of 1275 L/s. To produce continuous operation of the pump, a method of regeneration that does not thermally cycle the pump is employed. A small chamber (the "snail") passes over the pumping surface and removes the frost from it either by mechanical action with a scraper or by local heating. The material removed is topologically in a secondary vacuum system with low conductance into the primary vacuum; thus, the exhaust can be pumped at pressures up to an effective compression ratio determined by the ratio of the pumping speed to the leakage conductance of the snail. The pump, which is all-metal-sealed and dry and which regenerates every 60 s, would be an ideal system for pumping tritium. Potential fusion applications are for mpmp limiters, for repeating pneumatic pellet injection lines, and for the centrifuge pellet injector spin tank, all of which will require pumping tritium at high throughput. Industrial applications requiring ultraclean pumping of corrosive gases at high throughput, such as the reactive ion etch semiconductor process, may also be feasible.

12947 (DOE/ER/52111—1-10/86) Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor refueling: Technical progress report. Kim, K. (Illinois Univ., Urbana (USA). Dept. of Electrical and Computer Engineering). 10 Nov 1986. Contract FG02-84ER52111. 138p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87003417.

A detailed experimental study successfully demonstrates the acceleration of frozen hydrogen pellets by means of a fuseless two-stage electromagnetic railgun system. This system consists of a pneumatic hydrogen pellet injector, which freezes and pneumatically pre-accelerates (with high-pressure helium as the propellant gas) cylindrical 1.6-mm-dia by 2.15-mm-long hydrogen pellets, and a 60-cm-long, 1.6-mm-dia circular-bore electromagnetic railgun. The pellet is introduced into the railgun by means of a coupling piece, and a plasma-arc armature is created from the propellant gas by means of a very unique, fuseless, arc-initiation scheme. Railgun-accelerated hydrogen pellet velocities in excess of 1.6 km/s are achieved from pneumatically accelerated injection velocities of 800 m/s. Streak-camera and current-probe data show that the plasma-arc armature moves at a velocity proportional to the railgun current, I. Insight to this I-dependence is gained through the use of streak photography and current probes for varying bore geometries and gas pressures.

12948 (DOE/ER/53198—102) Reversed field pinch boundary study: Quarterly progress report for the period Sept. 13, 1986-Dec. 13, 1986. Dexter, R.N.; Prager, S.C.; Sprott, J.C. (Wisconsin Univ., Madison (USA). Dept. of Physics). Jan 1987. Contract FG02-85ER53198. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003998.

This report summarizes our progress during the seventh quarter of support of our RFP boundary study. We began and successfully completed the installation of the optimized divertor rings, thereby initiating Subproject-2. Plasmas have been formed and studied at the 100 kA level, but reversal as not yet been achieved. A program of glow and pulsed discharge cleaning has been initiated. We also took occupancy of a newly created control room adjacent to the eventual placement of MST. Optical cabling for the new data acquisition system was installed, and we are now using MDS, the MIT-developed Model Data (acquisition) System. Our engineers inspected the fabrication status and quality of MST in Italy, and reviewed the remaining scheduling features.

12949 (DOE/ER/53227—98) Stochasticity about a poloidal divertor separatrix. Skinner, D.A.; Osborne, T.H.; Prager, S.C.; Park, W. (Wisconsin Univ., Madison (USA). Dept. of Physics). Oct 1986. Contract FG02-86ER53227. 19p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003388.

The stochasticization of the magnetic separatrix due to the presence of a helical perturbation in a poloidal divertor tokamak is illustrated by a numerical computation which traces magnetic field lines.

12950 (DOE/ER/53227—101) Equilibrium studies of a poloidal divertor pinch with a reversed-toroidal field. Sarff, J.S.; Sprott, J.C.; Turner, L. (Wisconsin Univ., Madison (USA). Dept. of Physics). Nov 1986. Contract FG02-86ER53227. 38p. NTIS, PC A03. File Number DE87004143.

An analytic solution for the force-free magnetic field, del x B-vector = λB-vector, in the poloidal divertor configuration of the Tokapole II device is presented. Experiments conducted on Tokapole II which provide equilibrium magnetic field profile measurements using a magnetic probe are then described. Observations include a non-constant-λ profile and a large diamagnetic current near the magnetic separatrix.

12951 (GA-A—18133) Program element 2: Blanket and shield thermal-hydraulic and thermomechanical testing of the first Wall/Blanket/Shield program: Final report. (GA Technologies, Inc., San Diego, CA (USA)). Nov 1986. Contract W-31-109-ENG-38. 78p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87004042.

Two single-effect scoping tests were performed in Phase 1 of this project. These tests included the measurement of heat transfer contact resistance between a Li_2O breeder pellet and stainless steel clad in argon gas - in the temperature range of 500° to 700°C. The effective heat transfer coefficient was found to lie in the range of 1100 to 1700 W/m²-K which is acceptable for the design of Li_2O solid breeder blankets. This effective heat transfer coefficient is expected to improve in helium gas, which has a much higher thermal conductivity than argon. In the second set of tests, the thermomechanical behavior of Li_2O pellets was determined under simulated blanket conditions, including thermal cycling, in the presence of a helium gas purge flow of controlled moisture content. The results showed that at a temperature below 800°C and with a reasonable purge flow moisture content of ≈10 ppM, Li_2O pellet sintering and pore closure, pellet-clad interaction and vapor phase transport of LiOH are minimal. A multiple-effects solid breeder blanket integral simulation test, followed by an engineering-scale nuclear test are the proposed next steps in this series of tests. Preliminary designs for these experiments were completed. Fabrication techniques for the manufacturing of microspheres as an alternate fuel form for solid breeder fuel were also investigated in the study. Microspheres of $LiAlO_2$ from <30 μm to 180 μm were fabricated by the plasma spray technique. Production of $\sim$650 μm spheres by a sol-gel process was demonstrated and feasibility was indicated from the production of spheres from $\sim$100 μm to $\sim$800 μm in diameter.

12952 (IAE—4106/15) Data control system for the T-15 installation. Balabanov, Yu.V.; Matalin-Slutskij, L.A.; Timonin, V.V.; Fyakhretdinov, A.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 25p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700364.

A conception model of the automatization system of a physical experiment at the T-15 tokamak is described. Architecture of a

data control system and characteristics of a data base control system, suggested for application, are discussed. 11 refs.; 13 figs.; 1 tab.

12953 (INIS-SU—364, pp 219-226) **Problems of power, efficiency and frequency increasing for gyrotrons used in plasma investigations.** Gol'denberg, A.L.; Zapevalov, V.E.; Malygin, S.A. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE87780019. (CONF-8406342—Vol.1).

From 3. All-Union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (20 Jan 1984).

Ways of increasing efficiency of gyrotrons used for electron-cyclotron heating of plasma are studied. A possibility of magnetic field reduction during operation at harmonics of gyrofrequency as well as a possibility of using pulsed solenoids with long-term HF-pulse duration (0.1 s) are disclosed. It is also shown that two-stage recuperation of residual energy of electron flux permits to increase gyrotron efficiency up to 90%.

12954 (LBL—22296) **Heavy-ion fusion accelerator research, 1985.** (Lawrence Berkeley Lab., CA (USA)). Oct 1986. Contract AC03-76SF00098. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003541.

A plan for exploring the physics and technology of induction linac development is discussed which involves a series of increasingly sophisticated experiments. The first is the single-beam transport experiment, which has explored the physics of a single space-charge-dominated beam. Second is the multiple-beam experiment in which four independent beams will be transported and accelerated through a multigap accelerating structure. The single-beam transport experiment is described, and some results are given of stability studies and instrumentation studies. The design and fabrication of the multi-beam experiment are described, as well as results of a first round of experiments in which beam-current amplification was observed. Concurrent theoretical work, resulting in a variety of acce-leration schedules and sets of associated voltage waveforms required to implement the experiments, is also reported. (LEW)

12955 (NIIEFA-P-B—0698) **Analysis of magnetic and electrostatic field penetration through the blanket of a tokamak reactor on the discharge start.** Astapkovich, A.M.; Sadakov, S.N. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700363.

The technique of transient electromagnetic processes analysis in azimuthal-sectional constructions, using the coupled circuit approach, is considered. Calculational results of a vertical magnetic field and a vortex electromotive force (e.m.f.) penetration through the blanket of a tokamak reactor at the beginning of the discharge start are presented. The dependence of penetration delay in the magnetic field and vortex e.m.f. on the value of active blanket resistance in tracing the torus is obtained. 6 refs.; 6 figs.

12956 (UCID—20863) **TIBER II: Tokamak Ignition/Burn Experimental Reactor: 1986 status report.** Henning, C.D.; Logan, B.G. (Lawrence Livermore National Lab., CA (USA)). 23 Oct 1986. Contract W-7405-ENG-48. 255p. NTIS, PC A12/MF A01; GPO Dep. File Number DE87003975.

Several chapters are presented that cover the following areas: (1) physics basis; (2) current drive; (3) compact divertors; (4) neutron shielding; (5) high-current density, radiation-tolerant magnets; and (6) costs. (MOW)

12957 (UCRL—15623-85) **Development of charcoal sorbents for helium cryopumping.** Sedgley, D.W.; Tobin, A.G. (Grumman Aerospace Corp., Bethpage, NY (USA); Lawrence Livermore National Lab., CA (USA)). 30 Sep 1985. Contract W-7405-ENG-48. 41p. (AES—85-90). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003889.

Improved methods for cryopumping helium were developed for application to fusion reactors where high helium generation rates are expected. This study period evaluated charcoal particle size, bonding agent type and thickness, and substrate thickness. The optimum combination of charcoal, bond, and substrate was used to form a scaled-up panel for evaluation in the Tritium Systems Test Assembly (TSTA) at Los Alamos. The optimum combination is a 12 x 30 mesh coconut charcoal attached to a 0.48 cm thick copper substrate by a 0.015 cm thick silver phosphorus copper braze. A copper cement bond for attaching charcoal to a substrate was identified and tested. Helium pumping performance of this combination was comparable to that of the charcoal braze system. Environmental tests showed the charcoal's susceptibility to vacuum chamber contamination. Performance degradation followed exposure of ambient temperature charcoal to a vacuum for prolonged periods. Maintaining a liquid nitrogen-cooled shield between the charcoal and the source of contamination prevented this degradation. A combination of bake-out and LN shielding effected recovery of degraded performance.

12958 (UCRL—53723) **Static and dynamic analyses on the MFTF [Mirror Fusion Test Facility]-B Axicell Vacuum Vessel System: Final report.** Ng, D.S. (Lawrence Livermore National Lab., CA (USA)). Sep 1986. Contract W-7405-ENG-48. 69p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87003972.

The Mirror Fusion Test Facility (MFTF-B) at Lawrence Livermore National Laboratory (LLNL) is a large-scale, tandem-mirror-fusion experiment. MFTF-B comprises many highly interconnected systems, including a magnet array and a vacuum vessel. The vessel, which houses the magnet array, is supported by reinforced concrete piers and steel frames resting on an array of foundations and surrounded by a 7-ft-thick concrete shielding vault. The Pittsburgh-Des Moines (PDM) Corporation, which was awarded the contract to design and construct the vessel, carried out fixed-base static and dynamic analyses of a finite-element model of the axicell vessel and magnet systems, including the simulation of various loading conditions and three postulated earthquake excitations. Meanwhile, LLNL monitored PDM's analyses with modeling studies of its own, and independently evaluated the structural responses of the vessel in order to define design criteria for the interface members and other project equipment. The assumptions underlying the finite-element model and the behavior of the axicell vessel are described in detail in this report, with particular emphasis placed on comparing the LLNL and PDM studies and on analyzing the fixed-base behavior with the soil-structure interaction, which occurs between the vessel and the massive concrete vault wall during a postulated seismic event. The structural members that proved sensitive to the soil effect are also reevaluated.

12959 (UCRL—93786) **Compact Torus plasma ring accelerator: a new type driver for inertial confinement fusion.** Hartman, C.W.; Eddleman, J.L.; Hammer, J.H.; Meeker, D.L. (Lawrence Livermore National Lab., CA (USA)). 22 Aug 1986. Contract W-7405-ENG-48. 5p. (CONF-860601—10). NTIS, PC A02/MF A01; GPO Dep. File Number DE86016081.

From 4. international conference on emerging nuclear energy systems; Madrid, Spain (30 Jun 1986).

We discuss the acceleration of magnetically-confined plasma rings to provide a driver for ICF. The acceleration of plasma rings is predicted to be efficient and following focusing, to generate ion-bombardment power in the range 10^{15} to 10^{16} W/cm^2 at a total deposition energy of multimegajoules. The simplicity of plasma ring accelerator suggests that a 5 MJ (on target) driver would cost in the range 1 to 5 $/joule. First experimental tests of the accelerator are described.

12960 (UCRL—94217) **Construction and operation of the 12-T superconducting coils for the Mirror Fusion Test Facility.** Zbasnik, J.P.; Kozman, T.A.; Shimer, D.W.; Hathaway, D.R. (Lawrence Livermore National Lab., CA (USA)). 25 Sep 1986. Contract W-7405-ENG-48. 7p. (CONF-860914—20). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003394.

From Applied superconductivity conference (ASC '86); Baltimore, MD, USA (28 Sep 1986).

We have successfully constructed and tested a pair of high-field coils that is part of the magnet set of the Mirror Fusion Test

Facility (MFTF-B) at the Lawrence Livermore National Laboratory. Each coil consists of a multifilamentary Nb_3Sn magnet nested inside a multifilamentary NbTi magnet. During our test, these coils produced a central field of 12 T, with a peak conductor field of 12.5 T. The dimensions of the Nb_3Sn insert coil are: 1.34-m bore, 2.57-m outer diameter, and 1.14-m overall length. These coils were designed to be fully cryogenically stabilized and cooled by pool-boiling liquid helium. The operating current density of the Nb_3Sn coils is 2000 A/cm^2 and 2400 A/cm^2 for the NbTi magnet. In this paper, we present design considerations and details, construction techniques, and operational results of these coils.

12961 **(UCRL—94382) Review of target studies for heavy ion fusion.** Lindl, J.D.; Bangerter, R.D.; Mark, J.W.K.; Pan, Y.L. (Lawrence Livermore National Lab., CA (USA)). 24 Oct 1986. Contract W-7405-ENG-48. 12p. (CONF-860510—20). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003257.

From Symposium on heavy ion inertial fusion; Washington, DC, USA (27 May 1986).

We present an updated set of gain curves for radiation driven ion beam targets. The improved target performance calculated with nuclear spin polarized fuel will also be discussed. We discuss the conditions required for efficient conversion to x-rays of ion beam energy. These requirements are compared with those obtained for lasers. Recent results on symmetry requirements for direct drive ion beam targets are presented.

12962 **(UCRL—94638) Targets for laser and ion beam drivers.** Bangerter, R.O. (Lawrence Livermore National Lab., CA (USA)). 24 Oct 1986. Contract W-7405-ENG-48. 8p. (CONF-860510—21). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003256.

From Symposium on heavy ion inertial fusion; Washington, DC, USA (27 May 1986).

At the two previous heavy ion fusion symposia, researchers from Livermore presented their best estimates of target energy gain. The results presented at Tokyo differed significantly from those presented at Darmstadt. The Livermore estimates were again revised for this symposium. The new estimates are given in an accompanying paper by Lindl et al. and in additional detail in this paper. The new estimates are similar to the results presented at Darmstadt. The implications of the new results are discussed.

12963 **Variable control of neutron albedo in toroidal fusion devices.** Jassby, D.L.; Micklich, B.J. (to Dept. of Energy, Washington, DC). US Patent 4,626,400. 2 Dec 1986. Filed date 1 Jun 1983. v.p.

This patent describes a toroidal fusion plasma device, including a vacuum vessel for confining a plasma which contains fusion neutrons. The vacuum vessel has inboard and outboard walls, a arrangement for varying, between steady state operating modes, one of the flux and the energy spectrum of the fusion neutrons which are incident on the outboard wall. The arrangement comprises: neutron reflective material exclusively disposed immediately adjacent the inboard wall so as to reflect ones of the fusion neutrons having a predetermined flux and energy spectrum onto a predetermined portion of the outboard wall; and means for positioning the neutron reflective material into and out of communication with the fusion neutrons, whereby at least one of the flux and the energy spectrum of the fusion neutrons which are incident on the outboard wall is varied when the albedo material is in communication with the fusion neutrons.

12964 **Limiter.** Cohen, S.A.; Hosea, J.C.; Timberlake, J.R. (to Dept. of Energy, Washington, DC). US Patent 4,626,399. 2 Dec 1986. Filed date 19 Oct 1984. v.p.

This patent describes a nuclear fusion vacuum vessel having an inner wall; a scrape-off region which includes a bulk plasma energetic ions, and slide away electrons; and an improved limited, cylindrically symmetrical about an axis and rotatable about the axis. The limiter has a front face and a back face, the front face having an annular flat portion covering a major portion of the front face, and indented portion and a vertex therebetween. The vertex forms a leading edge for the slide away electrons, whereby the heat load absorbed by the limiter is distributed thereon upon rotation thereof.

12965 **Prospects for developing attractive magnetic fusion concepts.** Dean, S.O.; Clarke, J.F.; Fowler, T.K.; Furth, H.P.; Kulcinski, G.L.; Nuckolls, J.H.; Sheffield, J. (Fusion Power Assoc., Gaithersburg, MD). *Journal of Fusion Energy;* 5: No. 2, 107-122(Jun 1986). (CONF-850157—).

From Fusion Power Associates symposium on the search for attractive fusion concepts; La Jolla, CA, USA (31 Jan 1985).

Prospects are discussed for accelerating the fusion reactor program, specifically that engineers must show a systematic progress along the path to fusion power, that there must be a clear indication that they are intending to develop a commercial product, and that there must be in this country, a level of total R & D on energy technology that is commensurate with the energy problem that faces the United States in the future. Certain laboratory studies are cited. Selected areas of magentic fusion reactor improvement in the last decade, and the characteristics of attractive fusion reactors are discussed. Reactor design and fusion program costs are also examined.

12966 **Lasers and particle beam for fusion and strategic defense.** *Journal of Fusion Energy;* 5: No. 1, 95(Mar 1986). (CONF-850476—).

From Symposium on lasers and particle beams for fusion and strategic defense; Rochester, NY, USA (18 Apr 1985).

This special issue of the Journal of Fusion Energy consists of the edited transscripts of a symposium on the applications of laser and particle beams to fusion and strategic defense. Its eleven papers discuss these topics: the Strategic Defense Initiative; accelerators for heavy ion fusion; rf accelerators for fusion and strategic defense; Pulsed power, ICF, and the Strategic Defense Initiative; chemical lasers; the feasibility of KrF lasers for fusion; the damage resistance of coated optic; liquid crystal devices for laser systems; fusion neutral-particle beam research and its contribution to the Star Wars program; and induction linacs and free electron laser amplifiers for ICF devices and directed-energy weapons.

12967 **Determination of thermal conductivity from specific heat and thermal diffusivity measurements of plasma-sprayed cermets.** Roth, E.P.; Smith, M.F. (Sandia National Labs, Alboquerque, NM). *International Journal of Thermophysics;* 7: No. 2, 455-466(Mar 1986). (CONF-850617—).

From 9. symposium on thermophysical properties; Boulder, CO, USA (24 Jun 1985).

The thermal conductivities of three plasma-sprayed cermets have been determined over the temperature range 23-630 degrees C from the measurement of the specific heat, thermal diffusivity, and density. These cermets are mixtures of Al and SiC prepared by plasma spray deposition and are being considered for various applications in magnetic confinement fusion devices. The samples consisted of three compositions: 61 vol% Al/39 vol% SiC, 74 vol% Al/26 vol% SiC, and 83 vol% Al/17 vol% SiC. The specific heat was determined by differential scanning calorimetry through the Al melt transition up to 720°C, while the thermal diffusivity was determined using the laser flash technique up to 630°C. The linear thermal expansion was measured and used to correct the diffusivity and density values. The thermal diffusivity showed a significant increase after thermal cycling due to a reduction in the intergrain contact resistance, increasing from 0.4 to 0.6 cm /SUP 2./ S^{-1} at 160°C. However, effective medium theory calculations indicated that the thermal conductivities of both the Al and the SiC were below the ideal defect-free limit even after high-temperature cycling. The specific heat measurements showed suppressed melting points in the plasmasprayed cermets. The 39 vol% SiC began a melt endotherm at 577°C, which peaked in the 640-650°C range depending on the sample thermal history. Chemical and X-ray diffraction analysis indicated the presence of free silicon in the cermet and in the SiC powder, which resulted in a eutectic Al/Si alloy.

12968 **Conceptual design and neutronics analyses of a fusion reactor blanket simulation facility.** Beller, D.E. Lafayette, IN; Purdue Univ. (1986). 140p. University Microfilms Order No. 86-22,116.

Thesis (Ph. D.).

A new conceptual design of a fusion reactor blanket simulation facility was developed. This design follows the principles that have been successfully employed in the Purdue Fast Breeder Blan-

ket Facility (FBBR), because experiments conducted in it have resulted in the discovery of deficiencies in neutronics prediction methods. With this design, discrepancies between calculation and experimental data can be fully attributed to calculation methods because design deficiencies that could affect results are insignificant. Inelastic scattering cross sections are identified as a major source of these discrepancies. The conceptual design of this FBBR analog, the fusion reactor blanket facility (FRBF), is presented. Essential features are a cylindrical geometry and a distributed, cosine-shaped line source of 14-MeV neutrons. This source can be created by sweeping a deuteron beam over an elongated titanium-tritide target. To demonstrate that the design of the FRBF will not contribute significant deviations in experimental results, neutronics analyses were performed: results of comparisons of 2-dimensional to 1-dimensional predictions are reported for two blanket compositions. Expected deviations from 1-D predictions which are due to source anisotropy and blanket asymmetry are minimal. Thus, design of the FRBF allows simple and straightforward interpretation of the experimental results, without a need for coarse 3-D calculations.

99 GENERAL AND MISCELLANEOUS

12969 **(K/CSD/INF—86/19P) Using bar code technology to enhance classified document accountability.** Mountain, P.J.; Wade, D.J. (Oak Ridge Gaseous Diffusion Plant, TN (USA)). 1986. Contract AC05-84OT21400. 28p. (CONF-8611101—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87000760.

From 14. annual conference of the Department of Energy/ contractors micrographics and Information Management Association; Pleasanton, CA, USA (4 Nov 1986).

This paper describes a system of resources and procedures coordinated to improve a classified document inventorying process. The Bar Code Document Accountability System (BARDAS) was developed to demonstrate the feasibility of improving the management and reporting timeliness of secret document inventories by the accountable custodians. The paper discusses the reasons for the development method, the extensive error-checking, the degree of user-friendliness, and the use of bar code technology in accomplishing these goals. Finally, the reactions of users to the system and future plans for enhancement are discussed.

12970 **(LA—10899-SR) The Los Alamos National Laboratory (USA): Instituto Mexicano del Petroleo cooperative program for the ASPEN flowsheet simulator: Status report.** Phillips, T.T. (Los Alamos National Lab., NM (USA)). Jan 1987. 50p. NTIS, PC A03/MF A01. File Number DE87003806.

On June 20, 1983, the Los Alamos National Laboratory, the US Department of Energy, and the Instituto Mexicano del Petroleo (IMP) signed a Memorandum of Understanding (MOU) that established a program of cooperation between the Los Alamos National Laboratory and the IMP. This report describes the work done under Annex II of the MOU, which set up a program in the area of process simulation using the ASPEN flowsheet simulator. As a part of this program, two IMP engineers were trained at Los Alamos: one as an ASPEN system administrator and the other as an ASPEN applications engineer. After returning to Mexico, these engineers installed ASPEN on the IMP VAX computer and trained 30 other IMP engineers and scientists to use ASPEN. To date, IMP used ASPEN to simulate four major process plants. In addition, engineers from Los Alamos and IMP worked together during the summer of 1986 to develop an implementation of the UNIFAC method for predicting liquid-phase activity coefficients. The code was written and installed in ASPEN and has passed a series of initial test cases. The UNIFAC model will be released to the public domain when testing is complete. IMP has also developed and shared with Los Alamos some enhancements to a computer code that predicts physical property correlation constants for petroleum fractions. The success of the Los Alamos/IMP cooperative program for the ASPEN flowsheet simulator demonstrates that technology transfer can work in both directions. 18 refs.

12971 **(LA-UR—86-2600) Los Alamos science, Number 14.** (Los Alamos National Lab., NM (USA)). Fal 1986. Contract W-7405-ENG-36. 110p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87003612.

Nine authored articles are included covering: natural heat engine, photoconductivity, the Caribbean Basin, energy in Central America, peat, geothermal energy, and the MANIAC computer. Separate abstracts were prepared for the articles. (DLC)

12972 **(LBL-PUB—445-6/86) Recent papers submitted and reports issued.** (Lawrence Berkeley Lab., CA (USA)). Jun 1986. Contract AC03-76SF00098. 20p. NTIS, PC A02/ MF A01; GPO Dep. File Number DE87000180.

A total of 168 papers and reports are listed under: accelerator and fusion research, applied science, biology and medicine, Center for Advanced Materials, chemical biodynamics, computing, earth sciences, engineering, materials and molecular research, nuclear science, and physics. (DLC)

9901 Management

12973 **(AD-A—172402/0/XAB) Slam simulation base escape model using response surface methodology. Master's thesis.** Clark, S.P. (Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA). School of Engineering). Mar 1986. 111p. (AFIT/GST/OS—86M-3). NTIS, PC A06/MF A01.

This thesis presents a microcomputer-compatible, base escape nuclear-survivability model specifically designed to compute SAC alert aircraft pre-launch survivability. It computes the number of aircraft surviving from single or multiple bases under Sea Launched Ballistic Missile (SLBM) attack. The FORTRAN model concentrates on simulating the process from alert to take-off. In particular, it models the statistical variability of crew reaction time, engine start time, taxi time, and take-off separation time under various levels of readiness. Nuclear overpressure, gust, and thermal fluences are determined through response surface methods, and aircraft survivability is derived from cumulative log-normal damage functions. Its advantages over current base escape models are microcomputer compatibility and stochastic representation of the pre-launch survivability timing variables.

12974 **(AD-A—172419/4/XAB) Methodology for comparing a standoff weapon with current conventional munitions in a runway attack scenario. Master's thesis.** Coulter, D.M.; Fry, D.W. (Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA). School of Engineering). Mar 1986. 190p. (AFIT/GST/OS—86M-4). NTIS, PC A09/MF A01.

This research developed a SLAM discrete-event simulation model to support a methodology for comparing a standoff weapon with current conventional weapons. This study is limited to the defensive threats within a 20-NM terminal area surrounding a generic Warsaw Pact airfield. The emphasis of the study was simulation of the standoff weapon interactions with the terminal threats. Previous models have not attempted to model the threat reactions to the standoff-weapons. The resulting simulation enables the analyst to study the effects of weapon release conditions on weapon attrition, runway damage effectiveness, and aircraft attrition.

12975 **(DOE/MA—0276) Department of Energy audit liaison, followup and internal control review activity: Quarterly management report as of September 30, 1986.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Audit Liaison Div.). Dec 1986. 46p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003698.

There were 56 audit reports received with $2.6 million in new questioned costs. There were 54 reports closed, and the amounts reinstated and recovered were $2.2 million and $0.9 million, respectively. Four draft reports and one final GAO report requiring responses to GAO and/or the Congress were received and an additional 46 final reports were received for information. Seventeen inspector general (IG) reports were issued requiring preparation of a Departmental position. As of September 30, 1986, a total

of 133 internal control reviews (ICRs) were in the Departmental Internal Control Tracking System (DICTS) inventory.

12976 (AD-A—172196/8/XAB) RAMBOT (Restructuring Associative Memory Based on Training): a connectionist expert system that learns by example. Technical report, October 1985-April 1986. Mozer, M.C. (California Univ., San Diego, La Jolla (USA). Inst. for Cognitive Science). Aug 1986. 31p. (ICS—8610). NTIS, PC A03/MF A01.

Expert systems seem to be quite the rage in artificial intelligence, but getting expert knowledge into these systems is a difficult problem. One solution would be to endow the systems with powerful learning procedures that could discover appropriate behaviors by observing an expert in action. A promising source of such learning procedures can be found in recent work on connectionist networks, that is, massively parallel networks of simple processing elements. This paper discusses a connectionist expert system that learns to play a simple video game by observing a human player. The game, Robots, is played on a two-dimensional board containing the player and a number of computer-controlled robots. The object of the game is for the player to move around the board in a manner that will force all of the robots to collide with one another before any robot is able to catch the player. The connectionist system learns to associate observed situations on the board with observed moves. It is capable not only of the human player, but of learning generalizations that apply to novel situations.

12977 (AD-A—173122/3/XAB) Parallel unification scheduling in Prolog. Technical report. Citrin. (California Univ., Berkeley (USA)). 18 Sep 1986. 68p. NTIS, PC A04/MF A01.

Unification, the fundamental operation in the Prolog logic programming language can take up to 50% of the execution time of a typical Prolog system. One approach to speeding up the unification operation is to perform it on parallel hardware. Although it has been shown that, in general, there is no parallel algorithm for unification that is better than the best sequential algorithm, there is a substantial subset of unification which may be done in parallel. Identifying these subsets involves gathering data using an extension of Chang's static data-dependency analysis (SDDA), then using that data to schedule the components of a unification for parallel unification. Improvements to the information gathered by SDDA may be achieved through procedures splitting, a source-level transformation of the program. This thesis describes and evaluates the abovementioned techniques and their implementation. Results are compared to other techniques for speeding up unification. Ways in which these techniques may be applied to the Berkeley PLM machine are also described.

12978 (AD-A—173271/8/XAB) Block-oriented, local-memory-based linear-equation solution on the CRAY-2. Calahan, D.A. (Michigan Univ., Ann Arbor (USA). Dept. of Electrical Engineering and Computer Science). Aug 1986. 5p. NTIS, PC A02/MF A01.

The performances of a number of algorithms for the solution of (dense) linear equations are presented for the CRAY-2. Measurements show as much as a 6:1 speedup of blocked algorithms over conventional vectorized Gauss elimination. Execution rates in the range of 400 MFLOPS are achieved.

12979 (AD-A—173283/3/XAB) Applying activation theory for modeling task interference in dual-task situations. Final report, March 1985-June 1986. Navon. (California Univ., San Diego, La Jolla (USA). Inst. for Cognitive Science). 14 Jun 1986. 14p. NTIS, PC A02/MF A01.

The purpose of this one-year contract was to attempt to model the sources of task interference other than competition for processing resources. First, a general theory of attention was developed. The theory posits parallel computations by entities called modules, with little competition for common resources. Attention is assumed to control only the communication among modules. It is shown that the attentional mechanism is a vehicle for achieving selectivity, but is less fit for coping with multiple goals. Second, task interference of a type that is called crosstalk was computer-simulated on a parallel distributed processing network. Several interesting results emerge out of the simulation. Third, the role of conflict between outcomes of processes in producing task interference was studied experimentally. Subjects searched for different sorts of targets, each assigned to a different attentional channel. Confusability between channels and congruence of responses to them were found to be potent determinants of task interference. The author suggest that potential sources of outcome conflict may contribute to dual-task interference and argue that a great deal of the residual interference might result from other sorts of outcome conflict.

12980 (AD-A—173501/8/XAB) Visibility or disability: notes on attention. Technical report, July 1985-May 1986. Navon. (California Univ., San Diego, La Jolla (USA). Inst. for Cognitive Science). Jun 1986. 29p. (ICS—8606). NTIS, PC A03/MF A01.

This paper describes the framework of a theory of attention that posits parallel computations with little competition for common resources. The mind is likened to a set of processing entities called modules that may be active in parallel. Their activation is externally driven. Cooperation among modules lis often required for achieving goals which in turn calls for communication. Attention is assumed to control only the communication among modules. It exerts attentional emphasis by bringing the output of a to-be-attended module to the information of a maximal number of other modules, while limiting the ability of deemphasized modules to disseminate their output. This is achieved by a mechanism called decoupling that controls the connections among modules. The control of decoupling that is required for attentional emphasis is associated with an aversive phenomenal aspect that is usually called effort. The decoupling mechanism is a vehicle for achieving selectivity. It is less fit for coping with multiple goals. The reason is that confusion and outcome conflict are likely when more than one goal is emphasized. The architecture of the control over decoupling and the strategies used to cope with various situations are elaborated on.

12981 (AD-A—173593/5/XAB) Implementation of a multi-lingual database system - multi-backend database system interface. Master's thesis. Holste, S.T. (Naval Postgraduate School, Monterey, CA (USA)). Jun 1986. 128p. NTIS, PC A07/MF A01.

The limitations of the traditional Database Management System(DBMS) have become increasingly clear in recent years. Some of these limitations are interface inflexibility for user accesses, mono-lingual restriction in data languages, performance degradations over time, and excessive costs in upgrading. Two complementary approaches to the DBMS design and implementation--the multilingual database system(MLDS) and the multi-backend database system(MBDS)--effectively deal with the limitations of the traditional DBMS approach. MLDS offers a multi-lingual capability to the DBMS environment, thus freeing the user from the limitations and inflexibility of the single-data-model-and-language approach. MBDS, by contrast, is designed to deal with the issues of performance degradation and upgrading costs by providing a parallel-processing capability, and utilizing replicated software and identical hardware for expansion. System upgrades with BDS have been shown to provide an essentially proportional performance gain-to-upgrade-cost ratio. This thesis presents the implementation of an interface between MLDS and MBDS. Specifically, the author presents the procedures which create the template and Descriptor files in MLDS that are required by MBDS. Additionally the integration process tying these two systems together are described.

12982 (ANL—86-47) Mathematics and Computer Science Division Five-Year Plan, 1986-1991. (Argonne National Lab., IL (USA)). Nov 1986. Contract W-31-109-ENG-38. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004148.

This report sets forth the plans for the Mathematics and Computer Science Division during the next five years. These plans build on the Division's strong research programs in applied analy-

sis, computational mathematics, software methodology, and advanced computing. The report addresses five major issues: research programs, research environment, dissemination of research techniques, initiatives, and resource projections. Throughout, we summarize past and current efforts, and propose new areas of research and application. We view this report as a dynamic document that will be updated and revised as the Division continues its investigations in the forefront of mathematics and computer science.

12983 (ANL/MCS-TM—85) Solving banded systems on a parallel processor. Dongarra, J.J.; Johnsson, L. (Argonne National Lab., IL (USA)). Nov 1986. Contract W-31-109-ENG-38. 44p. NTIS, PC A03/MF A01. File Number DE87004032.

Ways of solving dense, banded systems on different parallel processors are examined. Processors with vector instructions are considered, and then various algorithms for the solution of large, dense, banded systems on a parallel processor are discussed. The behavior of the parallel algorithms on distributed-storage architectures configured as rings, two dimensional meshes with end-around connections (tori), boolean n-cube configured architectures, and bus-based and switch-based machines with shared storage is discussed. Measurements are presented for two bus-based architectures with shared storage, namely, the Alliant FX/8 and the Sequent Balance 21000. 43 refs.

12984 (CONF-870239—1) Observability analysis and bad data processing for state estimation using Hachtel augmented matrix method. Wu, F.F.; Liu, W.H.E.; Holten, L.; Gjelsvik, A.; Aam, S. (California Univ., Berkeley (USA); Norwegian State Power Board, Oslo; Elektrisitetsforsyningens Forskningsinstitutt, Trondheim (Norway)). 1987. Contract AC01-84CE76257. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87001320.

From 15. power industry computer application conference; Montreal, Canada (1 Feb 1987).

The triangular-factorization-based observability analysis and the normalized-residual-based bad data processing are extended to state estimation using Hachtel augmented matrix method. The Hachtel method is numerically robust, computationally efficient, and reasonable in extra storage requirement. In this paper it is shown that the observability analysis can be carried out in the process of triangular factorization of the augmented coefficient matrix used in the Hachtel method. Moreover, the normalized residuals are shown to be obtainable using the sparse inverse of this augmented matrix. The algorithms have been successfully incorporated in the state estimation program developed at Norwegian State Power Board (Statkraft). Test results on the IEEE 14 bus system and a 99-bus system consisting of the main grid of Southern Norway are presented. The Hachtel approach to state estimation provides an attractive alternative to the standard normal equations approach. 30 refs., 4 figs., 2 tabs.

12985 (CONF-8607100—1) Neural network modeling of early retinal vision processes. Jorgensen, C.C. (Oak Ridge National Lab., TN (USA). Engineering Physics and Mathematics Div.). 1986. Contract AC05-84OR21400. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87000746.

From NEUROCON 1 conference; San Jose, CA, USA (27 Jul 1986).

This paper considers two techniques to obtain values for parameters in models of vision processes in early layers of the human retina. The work is part of a long-term effort to develop a robot vision system using three computational principles of neural networks. These principles are: massive parallelism, dynamic feedback, and multi-layer pattern recognition. Two network models were studied. The first represented lateral inhibition processes as a matrix of two-dimensional linear equations with limited feedback. The second represented multi-layer networks as matrices of dynamic, two-dimensional nonlinear differential equations. The lateral inhibition model was parameterized using psychophysical data from human judgments of pattern brightness in a machband illusion. A 2-D Fourier transform was made of original and perceived patterns and used to solve for the coefficient matrix of the neural network. The coefficients were then applied to the pixel matrix of a Herman grid illusion and compared with the corresponding human subjective results through three-dimensional plots of pixel intensities. The second model was analyzed using a new computer simulation developed to work with moving images and adjustable neural connection topologies. 19 refs., 8 figs.

12986 (CONF-8609173—5) Studies of random number generators for parallel processing. Bowman, K.O.; Robinson, M.T. (Oak Ridge National Lab., TN (USA)). Sep 1986. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002817.

From 2. conference on hypercube multiprocessors; Knoxville, TN, USA (29 Sep 1986).

If Monte Carlo calculations are to be performed in a parallel processing environment, a method of generating appropriate sequences of pseudorandom numbers for each process must be available. Frederickson et al. proposed an elegant algorithm based on the concept of pseudorandom or Lehmer trees: the sequence of numbers from a linear congruential generator is divided into disjoint subsequences by the members of an auxilary sequence. One subsequence can be assigned to each process. Extensive tests show the algorithm to suffer from correlations between the parallel subsequences: this is a result of the small number of bits which particpate in the auxiliary sequence and illustrates the well-known discovery of Marsaglia. Two alternative algorithms are proposed, both of which appear to be free of interprocess correlations. One relaxes the conditions on the Lehmer tree by using an arbitrary auxiliary multiplier: it is not known to what extent the subsequences are disjoint. The other partitions the main sequence into disjoint subsequences by sending one member to each process in turn, minimizing interprocess communication by defining new sequence generating parameters. 10 refs., 4 figs.

12987 (DOE/ER/25009—327) Load balancing and sparse matrix vector multiplication on the hypercube. Fox, G.C. (California Inst. of Tech., Pasadena (USA)). 22 Jul 1986. Contract FG03-85ER25009. 35p. (CALT—68-1406). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003563.

We consider the calculation on a hypercube concurrent computer, of matrix vector multiplication $y = Ax$ where A is a large sparse matrix. A good decomposition is crucial for the case when each column of A on the average has fewer non zero elements than there are nodes in the hypercube. We develop graph theoretical and simulated annealing techniques which can lead to essentially optimal hypercube decompositions. The performance of the concurrent computer depends strongly on any correlations in the placement of non zero elements of A. 7 refs., 8 figs., 2 tabs.

12988 (DOE/ER/25009—336) Iterative full matrix-vector multiplication on the hypercube. Fox, G.C. (California Inst. of Tech., Pasadena (USA)). 29 Jul 1986. Contract FG03-85ER25009. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003561.

We analyze the performance of the hypercube for the iterative matrix vector multiplication y = ...A/sub j/A/sub j-1/ ...$A_3A_1A_0x$ in the case where the matrix A is full and quite small. 2 refs., 4 figs.

12989 (DOE/ER/25009—356) A comparison of the performance of the Caltech Mark 2 hypercube and the Elxsi 6400. Walker, D.W.; Fox, G.C.; Ho, A.; Montry, G.R. (California Inst. of Tech., Pasadena (USA); Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract FG03-85ER25009. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003559.

Previous work has investigated the use of the pre-conditioned, conjugate gradient (pcg) algorithm in solving finite element problems on the multi-processor Elxsi 6400, and has shown how the optimal use of cached and shared memory can result in faster code. In this paper the implementation of the algorithm on both the Caltech hypercube and the Elxsi 6400 are discussed. It was found that on both machines the pcg part of the code runs with efficiency greater than 90% for all problems large enough to be of interest. Sequential code can be ported to a shared memory machine without making algorithmic changes, however, extra coding is required to ensure cache coherency. When porting code to a hypercube it is often necessary to make algorithmic changes. A good implementa-

tion of the code discussed here on a shared memory machine would use a hypercube type of algorithm, with software support for hypercube message passing. 11 refs., 6 figs., 5 tabs.

12990 (K/CSD/TM—64) Automated Estimating System (AES): User's manual. Brandon, M.D.; Holder, D.A. Schwarz, R.L. (Oak Ridge Gaseous Diffusion Plant, TN (USA)). Dec 1986. Contract AC05-84OT21400. 131p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87004231.

This document describes Version 1.3 of the Automated Estimating System, a personal computer-based software package designed to aid in the creation, updating, and reporting of project cost estimates for the Estimating and Scheduling Department of the Martin Marietta Energy Systems Engineering Division.

12991 (LA—10898-MS) Los Alamos National Laboratory computer benchmarking, 1986. Simmons, M.L.; Wasserman, H.J. (Los Alamos National Lab., NM (USA)). Jan 1987. Contract W-7405-ENG-36. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003805.

This report summarizes the results of computer performance evaluations as measured by the Computer Research and Applications Group of the Los Alamos National Laboratory. The benchmarks were conducted between September 1983 and November 1986. Important characteristics of the machines tested are given, and execution times or megaflop rates for a set of portable Fortran 77 benchmark codes are listed. A brief description of the codes is included. Tests were performed on the following computers: Cray Research Inc. (CRI) CRAY-1S, X-MP/24, X-MP/48, X-MP/216, X-MP/416, and CRAY-2; Control Data Corporation (CDC) CYBER 825, 855, and 205; Fujitsu VP-200; Hitachi S810/20; NEC SX-2; IBM 3090/200; Digital Equipment Corporation (DEC) VAX 11/780, 11/785, and 8600; and the Convex Computer Corporation C-1. 12 refs., 10 tabs.

12992 (LA-UR—86-3628) Dimension density: An intensive measure of chaos in spatially extended turbulent systems. Kurz, T.; Mayer-Kress, G. (Los Alamos National Lab., NM (USA)). May 1986. Contract W-7405-ENG-36. 5p. (CONF-8605145—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87001976.

From International conference on the physics of phase space; College Park, MD, USA (20 May 1986).

The determination of correlation dimensions by the Grassberger-Procaccia algorithm from an experimental time series has become a standard tool in the analysis of low dimensional chaotic systems. Here we want to carry over this method to spatially extended systems which have a decaying spatial correlation. In these cases the total number of degrees of freedom or overall "dimension" grows with the size of the system. Then in a finite size system the dimension of the overall dynamics can be recovered already from a single point measurement, if the resolution is greater than some size dependent threshold. Therefore we expect that the measured dimension values will increase when smaller and smaller spatial structures are resolved. This feature is also observed in turbulence experiments [U. Frisch]. Thus the objective is to get an intensive (i.e. size independent) measure which locally characterizes turbulent systems. 5 refs., 2 figs.

12993 (LBL-PUB—3061) SUSIE reference manual. Belshe, R.A. (Lawrence Berkeley Lab., CA (USA)). Aug 1986. Contract AC03-76SF00098. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003553.

SUSIE is a program for interactive analysis of one and two dimensional spectra. It runs on the Modcomp Classic computers, and uses the Tektronix 4014 with a high-speed DMA interface and a LBL designed supplemental control panel. The original Modcomp version was written by M. Neiman (LBL PUB-3014, Feb. 1981). The current version is the result of a number of major revisions and extensions, the most significant being the addition of 2-D spectra, and the ability to access spectra which are created by the EVA event sorting program.

12994 (N—86-33032) First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985). Final Report. Denning, P.J. (National Aeronautics and Space Administration, Moffett Field, CA (USA). Ames Research Center). Apr 1986. 8p. (NASA-CR—179699; NAS—1.26:179699). NTIS, PC A02/MF A01.

The focus of the Research Institute for Advanced Computer Science (RIACS) is to explore matches between advanced computing architectures and the processes of scientific research. An architecture evaluation of the MIT static dataflow machine, specification of a graphical language for expressing distributed computations, and specification of an expert system for aiding in grid generation for two-dimensional flow problems was initiated. Research projects for 1984 and 1985 are summarized.

12995 (N—87-11511) Parallel processors and nonlinear structural dynamics algorithms and software. Final Technical report, 1 March-30 October 1986. Belytschko, T. (Northwestern Univ., Evanston, IL (USA)). Nov 1986. 35p. (NASA-CR—179889; NAS—1.26:179889). NTIS, PC A03/MF A01.

A nonlinear structural dynamics program with an element library that exploits parallel processing is under development. The aim is to exploit scheduling-allocation so that parallel processing and vectorization can effectively be treated in a general purpose program. As a byproduct an automatic scheme for assigning time steps was devised. A rudimentary form of the program is complete and has been tested; it shows substantial advantage can be taken of parallelism. In addition, a stability proof for the subcycling algorithm has been developed.

12996 (NUREG/CR—4591) INGEN: A COBRA-NC input generator user's manual. Wheeler, C.L.; Dodge, R.E. (Pacific Northwest Lab., Richland, WA (USA); Nuclear Regulatory Commission, Washington, DC (USA). Div. of BWR Licensing). Dec 1986. Contract AC06-76RL01830. 155p. (PNL—5827). NTIS, PC A08/MF A01 - GPO. File Number TI87003862.

The INGEN (INput GENerator) computer program has been developed as a preprocessor to simplify input generation for the COBRA-NC computer program. INGEN uses several empirical correlations and geometric assumptions to simplify the data input requirements for the COBRA-NC computer code. The simplified input scheme is obtained at the expense of much flexibility provided by COBRA-NC. For more complex problems requiring additional flexibility however, INGEN may be used to provide a skeletal input file to which the more detailed input may be added. This report describes the input requirements for INGEN and describes the algorithms and correlations used to generate the COBRA-NC input. 9 refs., 3 figs., 6 tabs.

12997 (ORNL—6261, pp 166-171) **Heuristic modeling.** May 1986. NTIS, PC A10/MF A01. File Number DE86011391.

In Chemistry Division annual progress report for period ending January 31, 1986.

In the teaching profession, the adjective "heuristic" designates an educational method by which a pupil is stimulated to make his or her own investigations and discoveries. The term heuristic modeling as applied to computational chemistry denotes the application of programming techniques, often from the field of artificial intelligence, to problems in chemistry which are not sufficiently well understood to permit rigorous mathematical modeling and first principle calculations. The diverse areas described below - printing ink formulation, machine inspection of printed currency, photographic color reproduction, and the synthesis of organic molecules - require heuristic modeling with a combination of nonnumerical and numerical programming methods. 18 refs., 1 fig.

12998 (ORNL/TM—10172) Advanced distributed processing with focus and PC/focus: Planning considerations and phased implementation. Snyder, C.E.; Hanlon, D.R. Jr.; Bettis, L.J.; O'Malley, J. (Oak Ridge National Lab., TN (USA)). Nov 1986. Contract AC05-84OR21400. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87004030.

A distributed data system that included shared data resident in a mainframe/PC local area network environment was successfully introduced to nontechnical end-users. The system provided the end-user with the control of responsiveness and reliability inherent in local application processing, along with the back-up support and archival storage/retrieval provided by a mainframe computer. A semaphore-driven locking scheme ensured referential data integrity across the shared data system, and HASP protocols provided fast and reliable file transfer capability. The project demonstrates that distributed methods can be applied to information systems to increase their efficiency and productivity. When the resources are on hand for such a system, planning and a phased approach to the appropriate implementation can bring success even in an end-user environment. 11 refs., 2 figs.

12999 **(REPT—5-46) Note on waiting times in systems with queues in parallel.** Blanc, J.P.C. (Technische Hogeschool Delft (Netherlands)). 1985. 13p. (ETN—86-98476). NTIS, PC A02/MF A01.

Numerical data concerning the mean and variance of the waiting time distribution for systems with queues in parallel, in which customers choose the shortest queue upon arrival are presented. A numerical method for calculating state probabilities and moments of queue length distributions is outlined. The method is based on power series expansions and recursion. It is applicable to systems with more than one waiting line. Numerical data concerning the mean and variance of the waiting time distribution for systems with queues in parallel, in which customers choose the shortest queue upon arrival are presented. A numerical method for calculating state probabilities and moments of queue length distributions is outlined. The method is based on power series expansions and recursion. It is applicable to systems with more than one waiting line.

13000 **(SAND—86-0586C) Interpretive model for "A Concurrency Method".** Carter, C.L. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 27p. (CONF-870208—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE86012655.

From 6. annual IEEE Phoenix conference on computers and communications; Scottsdale, AZ, USA (25 Feb 1987).

This paper describes an interpreter for "A Concurrency Method," in which concurrency is the inherent mode of operation and not an appendage to sequentiality. This method is based on the notions of data-drive and single-assignment while preserving a natural manner of programming. The interpreter is designed for and implemented on a network of Corvus Concept Personal Workstations, which are based on the Motorola MC68000 super-microcomputer. The interpreter utilizes the MC68000 processors in each workstation by communicating across OMNINET, the local area network designed for the workstations. The interpreter is a complete system, containing an editor, a compiler, an operating system with load balancer, and a communication facility. The system includes the basic arithmetic and trigonometric primitive operations for mathematical computations as well as the ability to construct more complex operations from these. 9 refs., 5 figs.

13001 **(SAND—86-0827) Data compression techniques for use with the SITAN [Sandia Terrain-Aided Navigation] algorithm.** Fellerhoff, J.R.; Creel, E.E. (Sandia National Labs., Albuquerque, NM (USA)). Jan 1987. Contract AC04-76DP00789. 34p. NTIS, PC A03/MF A01; 2; GPO Dep. File Number DE87003782.

Data compression algorithms are becoming an important part of systems that use digital terrain elevation data (DTED) such as moving map display systems, terrain-following and terrain-avoidance systems, and terrain-aided navigation systems. This paper describes and compares two DTED compression techniques for use with the Sandia Terrain-Aided Navigation (SITAN) algorithm designed specifically for operation in a land vehicle. One technique uses the two-dimensional discrete cosine transformation (2-D DCT) combined with linear scaling; the other uses data decimation in the spatial domain, followed by a differential pulse code modulation operation on the decimated spatial data. These techniques are designed to minimize the DTED reconstruction error for a given compression ratio and are targeted for implementation in the Motorola 68000-based Sandia Aerospace Computer. This paper presents a description of the DTED and its use by the SITAN algorithm. Also, background information concerning the 2-D DCT is presented, followed by a description of the two data compression algorithms. Experimental results are presented which show the magnitude of reconstruction errors for various sets of DTED and various compression ratios. Finally, the effect of reconstruction errors on SITAN performance is presented. 11 refs., 35 figs., 2 tabs.

13002 **(SAND—86-2633) HSTART: An improved initial step size routine for ODE codes.** Watts, H.A. (Sandia National Labs., Albuquerque, NM (USA)). Nov 1986. Contract AC04-76DP00789. 20p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87003965.

For the solution of initial value ordinary differential equations by library quality solvers, such as the DEPAC collection in the SLATEC library, it is important to start off with a good initial step size in order for the procedure to produce a reliable and efficient solution numerically. A substantial improvement has been made in the starting step size algorithm which corrects a long standing deficiency. Specifically, initial step sizes many orders from optimal (arising from stiff problems with mixed zero and nonzero initial values of disparate sizes) are brought under control.

13003 **(SLAC-PUB—3894) SLACnet: Implementation and experiences.** Cottrell, R.L.A.; Downey, T.; Frese, H.; Granieri, C.; Huffer, M.; Moss, L.; Streater, T.; Saxton, O.; Wiser, D. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Mar 1986. Contract AC03-76SF00515. 22p. (CONF-8603169—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003275.

From SHARE '66; Anaheim, CA, USA (16 Mar 1986).

SLACnet is a Local Area Network (LAN) using Ethernet and the Xerox Network System (XNS) protocols. It currently provides datagram, virtual circuit, remote procedure call and file transfer services. SLACnet connects together mutiple DEC VAX computers running VMS and an IBM 3081K mainframe running VM/SP. The IBM 3081 is connected to the Ethernet via a Device Attachment Control Unit (DACU). The source code consists of about 25K lines of C and 8K lines of assembler. About 16K lines are common to the IBM VM/SP and the DEC VMS implementations. SLACnet has been in production 24 hours a day since April, 1985, and coexists with DECnet on the same Ethernet. SLACnet is designed to keep the impact on the IBM 3081 to a minimum, and provide easy to use conversion between VM/SP and VMS sequential files. SLACnet provides bulk transport of up to a Gbyte/day of physics data between the VAXes and the IBM 3081, as well as the transfer of program source files, listings, object code, etc. This talk describes how SLACnet fits into VM, the services provided, the mapping between the DEC and IBM worlds, the performance of the various layers, the impact on VM/SP, and the development effort involved. 31 refs., 5 figs., 3 tabs.

13004 **(UCID—20896) BLOCKER: A block diagram editing utility, release notes.** Anderson, R. (Lawrence Livermore National Lab., CA (USA)). 9 Oct 1986. Contract W-7405-ENG-48. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003886.

The BLOCKER block diagram utility was written in the interest of promoting better software documentation. It allows the user to easily create block diagrams which can be stored within software source text files and printed out with standard line printing devices. In this way, sketches which are often drawn on paper during software coding can be kept in an organized manner for later reference. BLOCKER is written in the PRAXIS programming language; it runs on VT-100-compatible terminals under version 4.3 of the VMS operating system on VAX computers. 9 refs.

13005 **(UCID—20928) Cooperating intelligent agents.** Mason, C. (Lawrence Livermore National Lab., CA (USA)). Dec 1986. Contract W-7405-ENG-48. 44p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003976.

Distributed Artificial Intelligence is the subfield of Artificial Intelligence concerned with the creation of intelligent problem solving systems which are based on observtions of cooperative sys-

tems in our lives. This group problem solving approach promises a number of advantages over current sequentially based problem solvers. This paper presents an overview of the research issues which concern Distributed Artificial Intelligence and focuses on the design of such systems.

13006 **(UCRL—95441) Current and future issues in the design, analysis, and implementation of Distributed Computer-based Control Systems.** Suski, G.J.; Rodd, M.G. (Lawrence Livermore National Lab., CA (USA); University Coll. of Swansea (UK)). Sep 1986. Contract W-7405-ENG-48. 21p. (CONF-8609206—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002553.

From 7. IFAC workshop on distributed computer control systems; Bonn, F.R. Germany (29 Sep 1986).

The field of distributed computer control system engineering as applied specifically to laboratory, manufacturing, and process control applications, encompasses a spectrum of diverse computer disciplines. Over the past several years, researchers and applications engineers in this area have focused their attention on a variety of issues. The issues deemed most important have varied over time according to developments in hardware and software technology, trends towards more stringent performance and reliability criteria, evolution of internationally accepted standards, and the emergence of new application areas. Successive workshops in the IFAC series on Distributed Computer Control Systems (DCCS) have provided forums for discussing these issues. Early workshops concentrated on systems architectures and relevant issues such as programming languages, open versus closed architectures, and the applicability of emerging standards. Most recently, discussions have intensified on control system issues pertaining to flexible manufacturing systems and the development of modeling techniques to allow verification of system designs. It is evident that the emphasis changes with time. It has also become apparent that the evolution of technology frequently leads to the revisiting of prior issues for which new improved solutions become available. 42 refs., 11 figs.

13007 **(UCRL—95629) Calculation of Rayleigh-Taylor flows using vortex blobs.** Kerr, R.M. (Lawrence Livermore National Lab., CA (USA)). Oct 1986. Contract W-7405-ENG-48. 12p. (CONF-870235—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87002551.

From 3. international conference on stratified flows; Pasadena, CA, USA (3 Feb 1987).

A modification of a boundary-integral method is used to study the single-scale Rayleigh-Taylor instability for arbitrary Atwood number. Smoothing the Green's function using vortex blobs suppresses singularities in the curvature and other modifications are designed to extend the calculation through several singular events. The method successfully follows the development of a single mode to states with asymptotic velocities for the bubble and spike that depend on Atwood number and are independent of the blob size. Incipient droplet formation is observed. 15 refs., 6 figs.

13008 **WELDEX: An expert system for non-destructive testing of welds.** Mahalingam, S.; Sharma, D.D. (AI Knowledge Based Systems Group, Battelle Columbus Labs.). pp 572-576 of Proceedings of the 2nd conference on artificial intelligence applications. The engineering of knowledge-based systems. Piscataway, NJ; IEEE Service Center (1985). (CONF-851245—).

From 2. conference on artificial intelligence applications; Miami Beach, FL, USA (11 Dec 1985).

Expert systems are ideal for applications that require a large amount of specialized knowledge to solve problems. This paper describes an expert system, WELDEX, for identifying weld faults using the radiographic inspection technique. WELDEX is an implementation of the knowledge and reasoning process used by a human expert in interpreting the radiographs. WELDEX has been successful in interpreting standard radiographs of pipe line welds.

13009 **Learned navigation paths for a robot in unexplored terrain.** Iyengar, S.S.; Jorgensen, C.C.; Rao, S.V.N.; Weisbin, C.R. (Dept. of Computer Science, Louisiana State Univ., Baton Rouge, LA 70803). pp 148-155 of Proceedings of the 2nd conference on artificial intelligence applications. The engineering of knowledge-based systems. Piscataway, NJ; IEEE Service Center (1985). (CONF-851245—).

From 2. conference on artificial intelligence applications; Miami Beach, FL, USA (11 Dec 1985).

Finding optimal paths for robot navigation in known terrain has been studied for some time but, in many important situations, a robot would be required to navigate in completely new or partially explored terrain. The authors propose a method of robot navigation which requires no pre-learned model, makes maximal use of available information, records and synthesizes information from multiple journeys, and contains concepts of learning that allow for continuous transition from local to global path optimality. The model of the terrain consists of a spatial graph and a Voronoi diagram. Using acquired sensor data, polygonal boundaries containing perceived obstacles shrink to approximate the actual obstacles surfaces, free space for transit is correspondingly enlarged, and additional nodes and edges are recorded based on path intersections and stop points. Navigation planning is gradually accelerated with experience since improved global map information minimizes the need for further sensor data acquisition. The authors' method currently assumes obstacle locations are unchanging, navigation can be successfully conducted using two-dimensional projections, and sensor information is precise.

13010 **Self-organization of neural networks.** Clark, J.W.; Winston, J.V.; Rafelski, J. (Washington Univ., St. Louis, MO). *Physics Letters [Section] A;* **102A**: No. 4, 207-211(14 May 1984).

The plastic development of a neural-network model operating autonomously in discrete time is described by the temporal modification of interneuronal coupling strengths according to momentary neural activity. A simple algorithm (brainwashing) is found which, applied to nets with initially quasirandom connectivity, leads to model networks with properties conducive to the simulation of memory and learning phenomena. 18 references, 2 figures.

13011 **Long-range percolation in one dimension.** Spouge, J.L. (Los Alamos National Lab., NM). *Journal of Physics A: Mathematical and General;* **17**: 2349-2350(1984).

For lattice sites at integer values, the probability of a bond between sites m and n is a/absolute value of m-n/ where $a_0 = 0$. The authors strengthen Schulman's criterion for absence of an infinite cluster and suggest a Monte Carlo method for determining critical probabilities. The results derived from comparison of Schulman's Bethe lattice to branching processes. The authors note that a/sub n/ = pa/absolute value n/ (pa, $a < 1$) is probably the most mathematically tractable example of long-range percolation although it does not permit an infinite cluster. 3 references.

13012 **Harmonic analysis of a source identification problem.** Arnold, E.M. (Battelle Pacific Northwest Lab., Richland, WA). *Quarterly of Applied Mathematics;* 331-338(Oct 1982).

This paper presents the problem of identifying a source in a porous medium which hosts a steady flow field. The medium properties and the velocity potential are assumed known. The known functions will be considered as deterministic at first. The stochastic source identification problem will be considered later. A function f is sought satisfying the following equation: [div(K grad phi) = f] on a region D contained in R/sup n/ with known potential phi and permeability K. 7 references.

13013 **(PB—86112349) Guidelines for descriptive cataloging of reports: A revision of COSATI standard for descriptive cataloging of government scientific and technical reports.** (Commerce, Energy, NASA, Defense Information (CENDI) Cataloging Committee, Washington, DC (USA)). 1985. 98p. NTIS, PC A05/MF A01. File Number TI87900459.

Revised COSATI guidelines developed to maximize standardization of descriptive cataloging entries are defined. The rules presented govern the form of the essential cataloging elements for reports processed by the major federal information processing agencies: US Department of Commerce, US Department of Energy, National Aeronautics and Space Administration, and US Department of Defense. The elements are: accession number, organization name, organization code, title (unclassified), subtitle or descriptive note, personal author, publication date, pagination (for printed documents), funding number, report number, availability, supplementary note, and security classification. Additional elements of information and retrieval such as subject fields and groups, descriptors/subject terms, and abstract are also included within the scope of this standard. The guidelines are intended to provide users with a form of citation and index entries consistent within the products of the various information systems, and to facilitate the exchange of bibliographic information among the federal information processing agencies in the technical report literature field without costly duplicative effort, especially for machine-readable media.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Evaluation of epoxy composites using photoacoustic Fourier transform infrared spectroscopy. Final report, 12:11704 (R;US)
Army Natick Research and Development Center, MA (USA)
Storage study of electrolyte beverage for NBC (nuclear, biological, or chemical) environment. Final technical report, April 1983-April 1985, 12:11917 (R;US)
Army Research Inst. of Environmental Medicine, Natick, MA (USA)
Assessment of the effects of heat and NBC (nuclear, biological, and chemical) protective clothing on performance of critical military tasks. Final report, 12:11916 (R;US)
Physiological assessments of chemical-threat protective patient wraps in three environments. Manuscript report, 12:11920 (R;US)
Aspen Inst. for Humanistic Studies, CO (USA)
Energy and US industrial competitiveness in world markets, 12:11460 (R;US)
Atlantic Research Corp., Alexandria, VA (USA)
Research and development of hazardous/toxic waste analytical screening procedures. Available field methods for rapid screening of hazardous-waste materials at waste sites. Final report, December 1981-December 1982, 12:11436 (R;US)
Atomic Energy of Canada Ltd., Pinawa, Manitoba. Whiteshell Nuclear Research Establishment
Advanced containment research for the Canadian Nuclear Fuel Waste Management Program, 12:10921 (R;CA)
Auburn Univ., AL (USA). Dept. of Chemical Engineering
Interfacial chemistry in solvent extraction systems: Progress report for period April 1, 1986-March 31, 1987, 12:11751 (R;US)
Australian Atomic Energy Commission Research Establishment, Lucas Heights
Chernobyl nuclear accident and its consequences, 12:11376 (R;AU)
Operating procedures for the manufacture of radioactive SYNROC in the Actinide Laboratory, 12:11915 (R;AU)
Out-of-pile burnout experiments in a full-scale simulation of an irradiation rig in a HIFAR hollow fuel element facility, 12:11262 (R;AU)
Variation of neutron yield from a titanium-tritide target during deuterium beam bombardment, 12:12939 (R;AU)
Australian Coal Industry Research Labs. Ltd., North Ryde
Development and use of a gas outburst reporting form and database for outburst-prone collieries, 12:10772 (R;AU)

B

Babcock and Wilcox Co., Alliance, OH (USA). Research and Development Div.
Water blowing of fireside deposits in coal-fired: Utility boilers: Final report, 12:11154 (R;US)
Babcock and Wilcox Co., Lynchburg, VA (USA). Lynchburg Research Center
Calvert Cliffs Unit 1 tube examination: Final report, 12:11220 (R;US)
Battelle Columbus Div., OH (USA)
Circumferential cracking of supercritical boiler water-wall tubes: Final report, 12:11155 (R;US)
Resistance heating of nonmetals: State-of-the-art assessment: Final report, 12:11712 (R;US)
Battelle Columbus Labs., OH (USA)
Analysis of cracks in stainless steel TIG [tungsten inert gas] welds, 12:11217 (R;US)
Development of a process to produce chemicals from lignocellulose. Final report, 12:11555 (R;US)
Elastic-plastic finite element analysis of crack growth in large compact tension and circumferentially through-wall-cracked pipe specimen: Results of the first Battelle/NRC analysis round robin, 12:11635 (R;US)
Explosive fabrication of multilayer damper shield: Final report, 12:11616 (R;US)
Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation
Brine migration test report: Asse Salt Mine, Federal Republic of Germany: Technical report, 12:10924 (R;US)
Regional ground-water flow modeling for the Paradox Basin, Utah: Second status report, 12:10923 (R;US)
BBN Labs., Inc., Cambridge, MA (USA)
Development of the capacity to assess occupational noise overexposure in the mining industry. Open File report, 12:10837 (R;US)
Beca, Carter, Hollings and Ferner Ltd., Auckland (New Zealand)
Energy use in transport: Data report, 12:11454 (R;NZ)
Bechtel National, Inc., San Francisco, CA (USA)
Incorporating functional requirements into the structural design of the Defense Waste Processing Facility, 12:10935 (R;US)
Indirect liquefaction of coal via biosynthesis, 12:11008 (R;US)
Waste Isolation Pilot Plant design validation: Final report, 12:10932 (R;US)
Waste Isolation Pilot Plant design validation: Final report, Appendices, 12:10933 (R;US)
Belgrade Univ. (Yugoslavia). Inst. za Fiziku
Electron impact ionization of Ar^{8+}, 12:12587 (R;US)
BHRA Fluid Engineering, Cranfield (UK)
Negative pressure pneumatic conveying systems for CEGB power stations, 12:10785 (R;GB)

Birch og Krogboe Raadgivende Ingenioerkontor, Virum (Denmark)
Energy signature. Phase 2. Estimation, budgeting, and applications, 12:11527 (R;DK;In Danish)
Booz, Allen and Hamilton, Inc., Bethesda, MD (USA)
NCS EMP (National Communications System Electromagnetic Pulse) mitigation program: Aerial TI System test plan. Final report, 12:12226 (R;US)
Boston Coll., Chestnut Hill, MA (USA). Dept. of Physics
Dynamic ionosphere over Arecibo: a theoretical investigation, 12:12578 (R;US)
Boston Univ., MA (USA). Dept. of Physics
Particles and fields and their interactions: Progress report, 12:12647 (R;US)
Bowman Gray School of Medicine, Winston-Salem, NC (USA). Dept. of Radiology
Direct assays of radiation induced DNA base lesions in mammalian cells: Technical progress report, 12:12472 (R;US)
Brasilia Univ. (Brazil). Dept. de Geociencias
Copper mineralization geology of Mandacaru, State of Piaui, Brazil, 12:12283 (R;BR;In Portuguese)
Brigham Young Univ., Provo, UT (USA)
X-ray reflection from novel multilayers with variable smoothness and figure: Final technical report for the period 1 April 1984-15 May 1986, 12:12201 (R;US)
Brigham Young Univ., Provo, UT (USA). Combustion Lab.
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report no. 5 for the period 1 August 1986 to 31 October 1986, 12:10827 (R;US)
Brigham Young Univ., Provo, UT (USA). Dept. of Chemical Engineering
Effects of dispersion and support on adsorption, catalytic and electronic properties of cobalt/alumina CO hydrogenation catalysts: [Technical progress report], 12:11812 (R;US)
British Gas Corp., London
A process for the removal of sulphur compounds from gas mixtures, 12:10882 (TG;GB)
Bending stress and deflection of the cross section of buried pipes, 12:10888 (TG;GB)
Chloride induced corrosion in the generation and processing of gas produced from hard coal by the Lurgi high pressure gasification process, 12:10741 (TJ;GB)
Development of energy-saving combustion system: 9, Development of self-recuperative burner, 12:11573 (TG;GB)
Development of gas-fired small-scale small-scale glass melting furnace, 12:11574 (TG;US)
Development of low-noise combustion intensity burners (III), 12:12014 (TG;GB)
Preparatory study of project "oxides of nitrogen and the combustion of natural gas", 12:12280 (TG;GB)
British Hydromechanics Research Association, Cranfield
Survey of water jet roadway cutting, 12:10773 (R;GB)
British Petroleum Co. Ltd., Sunbury-on-Thames
Photovoltaic power system design for telecommunications, 12:11061 (R;GB)
Brookhaven National Lab., Upton, NY (USA)
Activation of N, P, and A1 in patients and cadavers using radiation from the medical accelerator, 12:12404 (R;US)
Analysis of surface contaminants on beryllium windows, 12:12076 (R;US)
Application of SLIM-MAUD: A test of an interactive computer-based method for organizing expert assessment of human performance and reliability: Volume 2, Appendices, 12:11400 (R;US)
Comparison of quasielastic scattering nu/sub μ/N $\rightarrow \mu^- P$ and Δ^{++} production reaction nu/sub μ/p $\rightarrow \mu^- \Delta^{++}$ in the BNL 7-foot deuterium bubble chamber, 12:12619 (R;US)
Current technology of particle physics detectors, 12:12200 (R;US)
Development and evaluation of polyethylene as solidification agent for low-level waste, 12:10925 (R;US)
Diffractive production of W, Z, top, + ??? at the SSC, 12:12198 (R;US)
Dynamical symmetries in nuclear structure, 12:12752 (R;US)
Evaluation of systems/equipment important to safety: Davis Besse, a perspective example, 12:11326 (R;US)
Evolving an acceptable nuclear power fuel cycle, 12:11446 (R;US)
Experimental method for determination of the branching ratio of reemitted positrons, 12:12585 (R;US)
Fire environment determination in the LaSalle NPP control room, 12:11325 (R;US)
Future hypernuclear experiments at BNL [Brookhaven National Laboratory], 12:12696 (R;US)
Gain reduction due to space charge at high counting rates in multiwire proportional chambers, 12:12197 (R;US)
Magnetic monopole catalysis of proton decay, 12:12618 (R;US)
Microscopic approaches to nucleon-antinucleon annihilation, 12:12643 (R;US)
Occupational dose reduction at nuclear power plants: Annotated bibliography of selected readings in radiation protection and ALARA, 12:12512 (R;US)
Operational safety reliability research, 12:11327 (R;US)
Perfluorocarbon tracer technology, 12:12240 (R;US)
Preliminary assessment of the performance of concrete as a structural material for alternative low-level radioactive waste disposal technologies, 12:11721 (R;US)
Processes determining cloudwater composition: Inferences from field measurements, 12:12239 (R;US)
Quench propagation across the copper wedges in SSC dipoles, 12:12075 (R;US)
Small angle spectrometers: Summary, 12:12199 (R;US)
Software description of the production of Lower-48 onshore oil and gas model, 12:10863 (R;US)
Synchrotron radiation photoemission studies of CO chemisorption on Pt/Ta(110) and Ni/Ta(110), 12:11602 (R;US)
Three dimensional modelling and numerical analysis of super-radiant harmonic emission in FEL (optical klystron), 12:11956 (R;US)
Trial application of reliability technology to emergency diesel generators at the Trojan Nuclear Power Plant, 12:11219 (R;US)
Workshop on short-term health effects of reactor accidents: Chernobyl, 12:12468 (R;US)
Brookhaven National Lab., Upton, NY (USA). Terrestrial and Aquatic Ecology Div.
Yields of field-grown soybeans exposed to simulated acidic rainfalls, 12:12292 (R;US)
Brown and Caldwell, Emeryville, CA (USA). Analytical Services Div.
Field evaluation of the S-Cubed model PCBA-102 PCB [polychlorinated biphenyl] analyzer: Final report, 12:12211 (R;US)
Brown Boveri Reaktor G.m.b.H., Mannheim (Germany, F.R.)
Facility for the storage of spent, heat-emitting and container-enclosed nuclear reactor fuel assemblies, 12:10918 (TG;US)
Brown Univ., Providence, RI (USA). Div. of Engineering
Active sites in char gasification: Quarterly technical progress report, 1 July 1986-30 September 1986, 12:10716 (R;US)

C

California Inst. of Tech., Pasadena (USA)
A comparison of the performance of the Caltech Mark 2 hypercube and the Elxsi 6400, 12:12989 (R;US)
Baryons on the lattice: 3, Energy density, 12:12646 (R;US)
Baryons on the lattice: 2, Static potential, 12:12645 (R;US)
Iterative full matrix-vector multiplication on the hypercube, 12:12988 (R;US)
Kinetics of coal combustion: Seventh quarterly report, 12:10824 (R;US)
Load balancing and sparse matrix vector multiplication on the hypercube, 12:12987 (R;US)
Minimization by simulated annealing: Is detailed balance necessary, 12:12884 (R;US)
Yang-Mills vacuum: An attempt of lattice loop calculus, 12:12666 (R;US)
California Univ., Berkeley (USA)
μ SR: 86 report on the 4th International Conference at Uppsala, 12:11593 (R;US)
A molecular surface science study of the structure of adsorbates on surfaces: Importance to lubrication, 12:12868 (R;US)
Bonding and reactivity of unsaturated hydrocarbons on transition metal surfaces: Spectroscopic and kinetic studies of platinum and rhodium single crystal surfaces, 12:11632 (R;US)
Observability analysis and bad data processing for state estimation using Hachtel augmented matrix method, 12:12984 (R;US)

Parallel unification scheduling in Prolog. Technical report, 12:12977 (R;US)
California Univ., Berkeley (USA). Dept. of Physics
Quantum limits of superconducting heterodyne receivers. Annual report, 15 May 1985-14 May 1986, 12:11921 (R;US)
California Univ., Irvine (USA). Dept. of Physiology and Biophysics
The role of membranes and transport in the salt tolerance of halobacteria, 12:12412 (R;US)
California Univ., Los Angeles (USA)
Ammonia-water phase diagram and its implications for icy satellites, 12:11818 (R;US)
Diffractive production of W, Z, top, + ??? at the SSC, 12:12198 (R;US)
Gyrotron: an application of the relativistic bunching of electrons to the generation of intense millimeter microwave radiation, 12:12935 (D;US)
Linear and nonlinear response of ion acoustic waves driven by optical mixing, 12:12937 (D;US)
Small angle spectrometers: Summary, 12:12199 (R;US)
California Univ., Los Angeles (USA). Dept. of Electrical Engineering
Experimental, theoretical and computational studies of the Plasma Beat Wave Accelerator: Progress report for the period 1 May 1983-30 April 1984, 12:12052 (R;US)
California Univ., Riverside (USA). Statewide Air Pollution Research Center
Effects of ozone and sulfur dioxide mixtures on forest vegetation of the southern Sierra Nevada. Final report, 12:12524 (R;US)
California Univ., San Diego, La Jolla (USA). Inst. for Cognitive Science
Applying activation theory for modeling task interference in dual-task situations. Final report, March 1985-June 1986, 12:12979 (R;US)
RAMBOT (Restructuring Associative Memory Based on Training): a connectionist expert system that learns by example. Technical report, October 1985-April 1986, 12:12976 (R;US)
Visibility or disability: notes on attention. Technical report, July 1985-May 1986, 12:12980 (R;US)
California Univ., Santa Barbara (USA). Quantum Inst.
Multimode dynamics in a free-electron laser with energy shift. Technical report, 1 October 1985-30 December 1986, 12:11949 (R;US)
Observation of single-mode operation in a free-electron laser. Technical report, 1 October 1985-30 December 1986, 12:11955 (R;US)
UCSB (University of California Santa Barbara) two-stage FEL (free-electron laser) experiment. Technical report No. 63, 1 October 1985-30 December 1986, 12:11951 (R;US)
Cambridge Univ. (UK). Dept. of Applied Mathematics and Theoretical Physics
Eguchi-Hanson type metrics from harmonic superspace, 12:12672 (R;SU)
Canada Centre for Mineral and Energy Technology, Ottawa, Ontario
A δP technique for the prediction and monitoring of coal oxidation, 12:10748 (R;CA)
Canadian coal preparation plants, 12:10695 (R;CA;In English, French, German and Russian)
Carbonization of conventional and partially briquetted charges of a Canadian steel company blend containing western Canadian coals, 12:10725 (R;CA)
Computer analysis of the effects of mine subsidence on pipelines, 12:10765 (R;CA)
Less conventional methods for mining underground coal, 12:10781 (R;CA)
Numerical evaluation of coal preparation density separators performance, 12:10699 (R;CA)
State-of-the-art of microseismic application for mining, 12:10776 (R;CA)
'Sub #4' user guide: computer calculation of longwall subsidence profiles using the NCB Subsidence Engineers Handbook, 12:10777 (R;CA)
Truck management systems review, 12:10775 (R;CA)
Canada Centre for Mineral and Energy Technology, Sydney, Nova Scotia. Cape Breton Coal Research Lab.
An evaluation of 9 East's monolithic packing as a gob sealant, 12:10779 (R;CA)
Gob leakage in 8 East at Lingan colliery, 12:10774 (R;CA)
In situ gas permeability testing in the No. 2 and No. 3 tunnels, Donkin-Morien project, Nova Scotia, 12:10780 (R;CA)
Mineralogical composition of respirable coal dust, 12:10749 (R;CA)
Some common features of retreat longwall panels in highly productive mines, 12:10778 (R;CA)
Carnegie-Mellon Univ., Pittsburgh, PA (USA)
Search for a strangeness -2 dibaryon using a ^{3}He target: Report of the E-813 collaboration on plans for ^{3}He target version of the H dibaryon search, 12:12622 (R;US)
Triple-differential cross sections of the (π^+/,pp) reaction on lithium isotopes, 12:12701 (R;US)
Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Metallurgical Engineering and Materials Science
The role of passive surface films on corrosion fatigue crack initiation: Technical progress report, 12:11610 (R;US)
Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics

AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Building Foundations Research agenda, 12:11531 (R;US)
Characterization of low-level liquid wastes at the Oak Ridge National Laboratory, 12:11787 (R;US)
Chemistry Division annual progress report for period ending January 31, 1986, 12:11748 (R;US)
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Determination of effects of atmospheric contamination on photovoltaic cells in concentrating systems, 12:11046 (R;US)
Dielectronic recombination of multiply charged ions, 12:12586 (R;US)
DOE-ORO contractors' environmental protection and waste management workshop: Program and abstracts, 12:12300 (R;US)
Effects of bark beetle outbreaks on species composition, biomass, and nutrient distribution in a mixed deciduous forest, 12:12281 (R;US)
Electron impact ionization of Ar^{9+}, 12:12587 (R;US)
Environmental Compliance Program reference book: Endangered Species Act/Fish and Wildlife Coordination Act, 12:11461 (R;US)
Environmental Compliance Program reference book: Safe Drinking Water Act, 12:11462 (R;US)
Facility for the storage of spent, heat-emitting and container-enclosed nuclear reactor fuel assemblies, 12:10918 (TG;US)
Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805, 12:12536 (R;US)
Fixation of waste materials in grouts: Part 3, Equation for critical flow rate, 12:10947 (R;US)
Heat pump experiments using crawl spaces as ground-to-air heat exchangers: Final report, 12:11519 (R;US)

Horizontal ground-coil heat exchanger theoretical and experimental analysis, 12:11529 (R;US)
In vivo toxicity of arsenic trioxide for human cells in diffusion chambers, 12:12522 (R;US)
Initial formulation results for in situ grouting of a waste trench at ORNL Site No. 6, 12:10949 (R;US)
Inventory of karst subsidence in the Valley and Ridge Province of East Tennessee, 12:10926 (R;US)
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)
Mini-proceedings of the workshop on heavy ion physics and instrumentation for a 15-Tm booster and storage ring, 12:12689 (R;US)
Nuclear facility decommissioning and site remedial actions: A selected bibliography: Volume 7, 12:10946 (R;US)
Nuclear medicine: Progress report for quarter ending June 30, 1986, 12:12405 (R;US)
Oak Ridge National Laboratory MPG and Market Shares Data System: User's manual, 12:11549 (R;US)
Precursors to potential severe core damage accidents, 1985, a status report: Main report and Appendixes A, B and C, 12:11403 (R;US)
Precursors to potential severe core damage accident, 1985: A status report: Appendices D, E, and F, 12:11404 (R;US)
Proceedings of the first geochemical workshop on shale: Environmental Sciences Division publication No. 2845, 12:10948 (R;US)
Renovation of dilute process wastewaters: Mini-pilot plant evaluation of an integrated process system to meet the Clean Water Act's heavy-metal and organic treatment requirements at Oak Ridge National Laboratory, 12:12343 (R;US)
Residential wood-use in the Pacific Northwest, 1979-1985, 12:11530 (R;US)
Resonance ionization mass spectrometry using ion-beam sampling, 12:12860 (R;US)
Resource Management Plan for the Oak Ridge Reservation: Volume 22, Resource information and site analysis for planning on the Oak Ridge Reservation, 12:12317 (R;US)
Resource Management Plan for the Oak Ridge Reservation: Volume 21, Water Conservation Plan for the Oak Ridge Reservation, 12:12339 (R;US)
Safety analysis report for the National Low-Temperature Neutron Irradiation Facility (NLTNIF) at the ORNL Bulk Shielding Reactor (BSR), 12:11408 (R;US)
Sample size and power calculations for tests on potential mutagens, 12:12523 (R;US)
Scintillation counting: an extrapolation into the future, 12:12209 (BA;CA)
Shielding calculations at dismantled synchrocyclotron, 12:12314 (R;US)
Studies of random number generators for parallel processing, 12:12986 (R;US)
The compact ignition tokamak: an overview, 12:12944 (R;US)
The Research and Development Analysis Modeling System World Natural Gas Model (RAMSGAS): Final documentation, 12:11465 (R;US)
Ultrasonic examination techniques for multicouple thermoelectric subcomponents and assemblies: Status report, 12:12001 (R;US)
Uncertainty in future global energy use and fossil fuel CO_2 emissions, 1975 to 2075, 12:12244 (R;US)

Oak Ridge National Lab., TN (USA). Engineering Physics and Mathematics Div.
Neural network modeling of early retinal vision processes, 12:12985 (R;US)

Oak Ridge National Lab., TN (USA). Fusion Energy Div.
High-throughput continuous cryopump, 12:12946 (R;US)

Oak Ridge National Lab., TN (USA). Metals and Ceramics Div.
Mechanical property measurements on ion-irradiated metals, 12:11638 (R;US)

Oak Ridge National Lab., TN (USA). Operations Div.
Development of thin foils for use in generating neutral particle beams, 12:11608 (R;US)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H.
Chernobyl reactor accident and its impact on Austrian agriculture, 12:12309 (R;AT;In German)
Conditioning of low-level radioactive waste at the Research Centre Seibersdorf, 12:10945 (R;AT)
Description of the Seibersdorf incineration plant for low level waste, 12:10944 (R;AT)
Determination of the wear of thermoplastic journal bearings in the initial strain, 12:11722 (R;AT)
Results of an intercomparison of gamma spectrometers in Austria; volume source ^{134}Cs and ^{137}Cs A-1986, 12:12206 (R;AT;In German)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H. Hauptabteilung Abfallverarbeitung
Conditioning of low-level radioactive waste at the Research Centre Seibersdorf, 12:10945 (R;AT)
Description of the Seibersdorf incineration plant for low level waste, 12:10944 (R;AT)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H. Inst. fuer Landwirtschaft
Chernobyl reactor accident and its impact on Austrian agriculture, 12:12309 (R;AT;In German)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H. Inst. fuer Strahlenschutz
Results of an intercomparison of gamma spectrometers in Austria; volume source ^{134}Cs and ^{137}Cs A-1986, 12:12206 (R;AT;In German)

Office of Technology Assessment (U.S. Congress), Washington, DC
Western surface mine permitting and reclamation, 12:10766 (R;US)

Ohio State Univ., Columbus (USA)
Kinetics of coal combustion: Seventh quarterly report, 12:10824 (R;US)

Ohio State Univ., Columbus (USA). Dept. of Mechanical Engineering
Effect of in-situ heat treatment on coal char reactivity. Final report, March 15, 1984-March 14, 1986. Part 2, 12:10823 (R;US)

O.H. Materials Co., Findlay, OH (USA)
Remedial action plan for gasoline leak near Building 403, Lawrence Livermore National Laboratory, Livermore, California, 12:12331 (R;US)

Oklahoma State Univ., Stillwater (USA). Dept. of Physics
Detecting the radiation amplitude zero in $e^{+-}p \rightarrow e^{+-}p\gamma$, 12:12649 (R;US)
See-saw masses for quarks and leptons in an ambidextrous electroweak interaction model, 12:12650 (R;US)

Operations Engineering, Inc., Fremont, CA (USA)
Graphic display development methodology: Volume 2, Appendixes: Final report, 12:11304 (R;US)

Oregon Univ., Portland (USA). Health Sciences Center
Etiology of early lifestage diseases, Project 84-44: Final report, 12:12318 (R;US)

Ortel Corp., Alhambra, CA (USA)
Self-induced frequency scanning and distributed Bragg reflection in semiconductor lasers with phase-conjugate feedback, 12:11948 (R;US)

Oslo Univ. (Norway). Raadet for Natur- og Miljoefag
Energy system of Norway in the year 2000. An analysis of possibilities, economy and environmental consequences, 12:11453 (R;NO;In Norwegian)

P

Pacific Northwest Lab., Richland, WA (USA)
Aerosols generated by spills of viscous solutions and slurries, 12:10982 (R;US)
Assessment of the feasibility of developing a Hanford Site weld modeling program, 12:11639 (R;US)
Biologic coal beneficiation: Literature review: Final report, 12:11001 (R;US)
Castor-1C spent fuel storage cask decay heat, heat transfer, and shielding analyses, 12:10914 (R;US)
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Chemical characterization, leach, and adsorption studies of solidified low-level wastes, 12:10979 (R;US)
COBRA-SFS [Spent Fuel Storage]: A thermal-hydraulic analysis computer code: Volume 1, Mathematical models and solution method, 12:10915 (R;US)
Comparison of HYDRA predictions to temperature data from two single-assembly spent fuel heat transfer tests, 12:10916 (R;US)

Engineered sorbent barriers for low-level waste disposal, 12:10951 (R;US)
Geologic spatial analysis: A new multiple data source exploration tool, 12:12555 (R;US)
INGEN: A COBRA-NC input generator user's manual, 12:12996 (R;US)
Irradiation history and final postirradiation data for IFA-432, 12:11322 (R;US)
Model simulation of plume dispersion in a narrow valley after sunrise, 12:12260 (R;US)
Optical readout method for solid-state dosemeters, 12:12514 (R;US)
Recent studies of simultaneous ionization and charge transfer in helium ion-atom collisions, 12:12591 (R;US)
Review of existing residential energy efficiency certification and rating programs, 12:11532 (R;US)
Separation of gas mixtures by supported complexes, 12:11788 (R;US)
Statistical analysis of health effects on workers at Hanford, 12:12515 (R;US)
Status of beta measurement evaluation and upgrade program, 12:12858 (R;US)
Surface analysis and electrochemical studies of sulfur enhanced corrosion of nickel, 12:11869 (R;US)
TMI-2 sludge separation and packaging analyses and conceptual design: Final report, 12:10936 (R;US)
Uncertainty in future global energy use and fossil fuel CO_2 emissions, 1975 to 2075, 12:12244 (R;US)
Value-impact study for implementation of a portable health physics instrumentation performance standard, 12:12513 (R;US)

Page (R.J.) Co., Santa Ana, CA (USA)
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: feasibility demonstration, 12:11633 (R;US)

Paris-6 Univ., 75 (France)
OPEC-OECD. Market analysis. Oil flow, 12:10867 (R;FR;In French)
Photooxidation inhibitors for petroleum products, 12:10874 (R;FR;In French)

SMUDPV2: Quarterly performance report 2 for the period July through September 1986, 12:11060 (R;US)
Saint John Fisher Coll., Rochester, NY (USA)
Multilevel relaxation phenomena and population trapping: [Progress report], July 1, 1984-June 30, 1987, 12:12588 (R;US)
Sandia National Labs., Albuquerque, NM (USA)
A comparison of the performance of the Caltech Mark 2 hypercube and the Elxsi 6400, 12:12989 (R;US)
Analysis of core damage frequency from internal events: Zion Unit 1, 12:11402 (R;US)
Analysis of Peach Bottom station blackout with MELCOR, 12:11409 (R;US)
Assessment of radionuclide vapor-phase transport in unsaturated tuff, 12:10943 (R;US)
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:11401 (R;US)
Data compression techniques for use with the SITAN [Sandia Terrain-Aided Navigation] algorithm, 12:13001 (R;US)
Determination of effective thermal conductivities for a full-scale mock-up of a 217-element breeder reactor fuel assembly subjected to normal shipping conditions, 12:10917 (R;US)
Development and implementation: Test Series B of the small-scale seal performance tests, 12:11730 (R;US)
Epitaxial semiconductor optical interference filters, 12:11731 (R;US)
Heat and mass release for some transient fuel source fires: A test report, 12:11405 (R;US)
Heat engine development for solar thermal dish-electric power plants, 12:11067 (R;US)
HSTART: An improved initial step size routine for ODE codes, 12:13002 (R;US)
Injection-seeding studies of diode laser array behavior, 12:11960 (R;US)
[In-Situ Heat Transfer Experiment (ISHTE): Final report on contract 52-5769, 12:10954 (R;US)
Interpretive model for "A Concurrency Method", 12:13000 (R;US)
ISHTE [In-Situ Heat Transfer Experiment] rigging: Final report, 12:10955 (R;US)
Key stimuli for oil price fluctuations, 12:10868 (R;US)
Laser mapping of Al-h^+ impurity distribution in vacuum swept crystalline quartz, 12:11688 (R;US)
Mass balance computation in SAGUARO, 12:10952 (R;US)
Quantum-resolved gas-surface scattering: NH_3 from Au (111), 12:12594 (R;US)
Reliability study of Solar One, the central receiver pilot plant, 12:11066 (R;US)
SNLA's [Sandia National Laboratories at Albuquerque] high precision ultrasonic scanning system and synthetic-aperature-focusing technique, 12:12002 (R;US)
The development of diagnostic fuses, 12:12228 (R;US)
The ISHTE [In-Situ Heat Transfer Experiment] lander: Final report, 12:10953 (R;US)
Thermal effects in gain-guided diode laser arrays, 12:11961 (R;US)
Thermal stress fracturing of magma simulant materials, 12:11097 (R;US)
Transient fire environment cable damageability test results: Phase 1, 12:11261 (R;US)
Sandia National Labs., Livermore, CA (USA)
Moisture absorption in graphite/organic-matrix composites, 12:11732 (R;US)
Sao Paulo Univ. (Brazil)
Cation interdiffusion in the UO_2-(U, Pu)O_2 and UO_2 - PuO_2 systems, 12:10911 (R;BR;In Portuguese)
Direct observation of gliding dislocations interactions with defects in irradiated niobium single crystals by means of the high voltage electronic microscopy (HVEM), 12:12839 (R;BR;In Portuguese)
Preparation of a homogeneous extract of human growth hormone, isohormone B, and its ^{125}I-labelling for utilization in radioligand assays, 12:11889 (R;BR;In Portuguese)
Proceedings of the Regional Workshop on Nuclear Techniques in Crop Production - Abstracts, 12:12441 (R;BR;In Portuguese)
Proceedings of the Regional Workshop on Nuclear Techniques in Crop Production, 12:12477 (R;BR;In Portuguese)
Sao Paulo Univ. (Brazil). Inst. de Geociencias
Geochronologic (K-Ar/Fission track) east-west profile of the Rio Grande do Sul shield, 12:12533 (R;BR;In Portuguese)
Geochronologic (K-Ar/Fission Track) east-west profile of the Rio Grande do Sul shield, 12:12535 (R;BR;In Portuguese)
Petrography, structure and geochemistry of nepheline syenites from the Pocos de Caldas alkaline massif, states of Minas Gerais and Sao Paulo, Brazil, 12:12287 (R;BR;In Portuguese)
Salinization mechanisms in semi-arid regions. Study of the Pereira de Miranda and Caxitore dams, state of Ceara, Brazil, 12:12282 (R;BR;In Portuguese)
Schweizerisches Inst. fuer Nuklearforschung, Villigen
An intense ion source for H^- cyclotrons, 12:12165 (R;CA)
Science Applications International Corp., McLean, VA (USA)
Trial application of reliability technology to emergency diesel generators at the Trojan Nuclear Power Plant, 12:11219 (R;US)
Science Applications International Corp., Oak Ridge, TN (USA)
Uncertainty in future global energy use and fossil fuel CO_2 emissions, 1975 to 2075, 12:12244 (R;US)
Selma Univ., AL (USA). Div. of Natural and Applied Sciences
[Radiation induced changes in the cuticular hydrocarbons of the granary weevil and their relationship to dessication and adult mortality]: Quarterly report, August 15 to November 14, 1986, 12:12469 (R;US)
SERPRO - Servico Federal de Processamento de Dados, Rio de Janeiro (Brazil)
Non-equivalence effects in cluster self-consistent calculations of ionic solids, 12:11727 (R;BR)
Single-Ply Inst. of America, Inc., Pasadena, MD
Photovoltaic membrane (PVM) roof system: Final technical report, 12:11025 (R;US)
Skibsteknisk Laboratorium, Lyngby (Denmark)
Basic material for auxiliary sails on ships, 12:11551 (R;DK;In Danish)
Influence from local terrain obstacles on the energy production by wind turbines, 12:11104 (R;DK;In Danish)

Skidaway Inst. of Oceanography, Savannah, GA (USA)
Biological processes in the water column of the south Atlantic bight: Phytoplankton responses: Progress report, June 1986 to May 1987, 12:12319 (R;US)
Skovteknisk Inst., Copenhagen (Denmark)
Horse bunching of small trees from thinnings, 12:11048 (R;DK;In Danish)
Slovenska Akademia Vied, Bratislava (Czechoslovakia). Elektrotechnicky Ustav
Superconducting magnet calibration stand. Construction, 12:12047 (R;SU;In Russian)
Smithsonian Astrophysical Observatory, Cambridge, MA (USA)
Combined ultraviolet studies of astronomical sources. Semiannual Progress report, 1 February-31 July 1986, 12:12571 (R;US)
Sociedade Brasileira de Geologia, Sao Paulo
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
Geochronologic (K-Ar/Fission Track) east-west profile of the Rio Grande do Sul shield, 12:12535 (R;BR;In Portuguese)
Solar Energy Research Inst., Golden, CO (USA)
Solar Thermal Technology Program bibliography, 1973-1985, 12:11068 (R;US)
The preparation of thin films for photovoltaic conversion by novel MOCVD [metallorganic chemical vapour deposition] techniques: Annual subcontract report, 15 February 1985-15 April 1986, 12:11047 (R;US)
Thermodynamic data for biomass conversion and waste incineration, 12:11014 (R;US)
Southern Illinois Univ., Carbondale (USA)
Modeling for economic and policy analysis of strategies to reduce coal sulfur emissions: Final report, July 1, 1985-February 28, 1986, 12:10764 (R;US)
South Point Ethanol, OH (USA)
South Point Ethanol 60-million gallon per year fuel-ethanol plant: Final report, 12:11006 (R;US)
South Point Ethanol 60-million gallon per year fuel-ethanol plant: Final report, 12:11007 (R;US)
Southwest Research Inst., San Antonio, TX (USA). Belvoir Fuels and Lubricants Research Facility
Detailed chemical analysis of fuel methanol for trace impurities. Interim report, January-August 1986, 12:11004 (R;US)
Effect of fuel properties on injection characteristics of four different diesel injection systems. Interim report, October 1983-December 1985, 12:10861 (R;US)
Spectra Technology, Inc., Bellevue, WA (USA)
Rotor-mounted monitoring system for hydroelectric generators: Final report, 12:11022 (R;US)
SRI International, Menlo Park, CA (USA)
Airborne CO_2 dial (differential absorption lidar) measurement of atmospheric tracer gas concentration distributions, 12:12237 (R;US)
Comparison of simultaneous Chatanika and Millstone Hill observations with ionospheric model predictions, 12:12580 (R;US)
Gas phase reactions of ruthenium tetroxide with nitrogen oxides: Final report, 12:11754 (R;US)
High temperature coal gas chloride cleanup for molten carbonate fuel cell applications: Final report, 12:11503 (R;US)
SRI International, Menlo Park, CA (USA). Atmospheric Science Center
Development and demonstration of ALARM (airborne lidar agent remote monitor). Final report, 12:12238 (R;US)
Stanford Linear Accelerator Center, Menlo Park, CA (USA)
A guide to data in elementary particle physics, 12:12637 (R;US)
A note on the relationship between the emittance, the beta function and the energy in a linear collider, 12:12071 (R;US)
A study of strange and strangeonium states produced in LASS [Large Aperture Superconducting Solenoid], 12:12639 (R;US)
Detection of Higgs bosons decaying to bottom quarks, 12:12660 (R;US)
Electrodisintegration of few body systems at SLAC and the Y scaling approach, 12:12699 (R;US)
FASTBUS dual-port memory and display diagnostic module, 12:12007 (R;US)
Radiation interlocks: The choice between conventional hard-wired logic and computer-based systems, 12:11939 (R;US)
SLACnet: Implementation and experiences, 12:13003 (R;US)
Stanford Univ., CA (USA). Edward L. Ginzton Lab.
Cryogenic acoustic microscopy. Annual technical report, 1 April 1985-31 March 1986, 12:11919 (R;US)
Statens Byggeforskningsinstitut, Hoersholm (Denmark)
Comparison between high-temperature and low-temperature radiator systems. Results from a test project, 12:11533 (R;DK;In Danish)
Energy consumption for heating of buildings. Unit consumption for energy planning, 12:11535 (R;DK;In Danish)
Production and distribution of hot utility water in a low-temperature radiator system. Results from a test project, 12:11534 (R;DK;In Danish)
Statens Energiverk, Stockholm (Sweden)
Agglomeration of pulverized coal, 12:10788 (R;SE;In Swedish)
Chemistry of geothermal water when storing at high temperature, 12:11098 (R;SE;In Swedish)
Combined heat and power production in local communities. Production, potential, prognoses, 12:11455 (R;SE;In Swedish)
Flue gas condensation when firing wood in single-family houses, 12:11536 (R;SE;In Swedish)
IEA Peat production and utilization project. Annual report, 1985, 12:11443 (R;SE)
Large scale trial Storfoersoek Syd. Cultivation of energy forests in the south of Sweden. Report stage 4, 12:11054 (R;SE;In Swedish)
Minor thermal power station Vaernamo 7 MW/sub/(e)/15 MW/sub/(v)/, 12:11176 (R;SE;In Swedish)
Oil mixed with water. Investigation and combustion of cracked high viscous fuel oils, 12:10879 (R;SE;In Swedish)
Reduction of oil consumption at governmental authorities 1990. Specification of plans. Analysis of possibilities, 12:11528 (R;SE;In Swedish)
Storage of bundled unlimed pulpwood and logging residues, 12:11015 (R;SE;In Swedish and English)
Statens Jordbrugsoekonomiske Inst., Valby (Denmark)
Economic competitive power of alternative energy systems for farmsteads, 12:11570 (R;DK;In Danish)
Statens Provningsanstalt, Stockholm (Sweden)
Results of an outdoor and indoor pyranometer comparison, 12:11084 (R;US)
Statens Raad foer Byggnadsforskning, Stockholm (Sweden)
Application of latent heat stores, 12:11416 (R;SE;In Swedish)
Heat from the air used to ventilate drains. Practical tests, 12:11516 (R;SE;In Swedish)
State Univ. of New York, Stony Brook (USA). Dept. of Radiation Oncology
Activation of N, P, and A1 in patients and cadavers using radiation from the medical accelerator, 12:12404 (R;US)
Stearns Catalytic Corp., Denver, CO (USA)
Economic evaluation of FGD systems: Volume 5, The NOXSO and SOXAL sodium-based processes and four additional calcium-based processes: Final report, 12:10761 (R;US)
Stevens Inst. of Tech., Hoboken, NJ (USA). Dept. of Physics
Investigations of transitions from order to chaos in dynamical systems: Progress report, 12:12885 (R;US)
Stichting Energieonderzoek Centrum Nederland, Petten. Energie Studie Centrum
Consequences of environmental policy for private passenger transport, 12:11587 (R;NL;DU)
Energy conservation-information for the neighbourhood. Interim report 1: Social diagnosis, 12:11577 (R;NL;DU)
Investment in saving energy costs. An investigation into the deliveries by the Dutch trade and industry, 12:11557 (R;NL;DU)
Natural gas revenues in The Netherlands 1985-2000, 12:10886 (R;NL;DU)
Saving in costs in the electric power generating sector by introducing wind power, 12:11173 (R;NL;DU)
The outlook for industrial cogeneration in Western Europe (gas turbines in the early nineties), 12:11558 (R;NL)
Stone and Webster Engineering Corp., Boston, MA (USA)
Economic evaluation of microfine coal-water slurry: Final report, 12:10698 (R;US)
Structural Integrity Associates, San Jose, CA (USA)
Evaluation of BWR top-guide integrity: Final report, 12:11205 (R;US)
Studsvik Energiteknik AB, Nykoeping (Sweden)
Agglomeration of pulverized coal, 12:10788 (R;SE;In Swedish)

Flue gas condensation when firing wood in single-family houses, 12:11536 (R;SE;In Swedish)
Surface Science Labs., Mountain View, CA (USA)
Improved determination of backscattering amplitude and phase shift functions, 12:11749 (R;US)
Sveriges Geologiska Undersoekning, Uppsala
Ground water quality, 12:12326 (R;SE;In Swedish)
Swedish Nuclear Power Inspectorate, Stockholm
INTRACOIN study: Appendices, 12:10964 (R;SE)
Swedish Univ. of Agricultural Sciences, Uppsala. Energy Forestry Project
Frosts during the growing season. Frequency of occurrence and effects on current energy forestry, 12:11050 (R;SE;In Swedish)
Gross morphology and anatomy of current shoots of Salix, 12:11049 (R;SE)
Infection patterns and host differences in Melampsora attacks on Salix plantations, 12:11051 (R;SE;In Swedish)
Role of meteorology in Swedish conventional and short-rotation forestry, 12:11053 (R;SE;In Swedish)
Site descriptions of Swedish energy forests. Background data from a plant conservation study, 12:11052 (R;SE)
Sydney Univ. (Australia). School of Civil and Mining Engineering
Thermomechanical analysis of some proposed schemes for radioactive waste disposal. Research report, 12:10950 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

Study on features of flow field and atmospheric dispersion parameters in mountainous area by balanced balloons, 12:12236 (TG;US)
Deposition
Dry deposition parameterization in long range transport models, 12:12248 (R;NL)
Long-Range Transport
Effective removal parameters in long-range transport models, derived from diffusion theory calculations, 12:12246 (R;NL)
Mathematical Models
Method of estimating the long-term average concentration from the power plant's high stack, 12:11193 (TG;US)
Plumes
Experimental study of stack plume rise and dispersion at the power station, 12:11179 (R;US)
Tracer Techniques
Airborne CO_2 dial (differential absorption lidar) measurement of atmospheric tracer gas concentration distributions, 12:12237 (R;US)

AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Reduction of radon progeny in indoor air. Master's thesis, 12:12266 (R;US)

AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Economic Impact
The Tennessee State Acid Rain (STAR) Project, 12:11438 (R;US)
Environmental Impacts
Control of criteria and non-criteria pollutants from coal/liquid mixture combustion, 12:11906 (R;US)
Meetings
Proceedings: 1986 joint symposium on dry SO_2 and simultaneous SO_2/NO/sub x/ control technologies: Volume 1, Sorbents, process research, and dispersion, 12:11187 (R;US)
Project European Research Center for Air Pollution Abatement Measures, 12:12247 (R;DE;In German)
Technology Transfer
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)
Technology Utilization
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)

AIR POLLUTION MONITORS
Optical Radar
Airborne CO_2 dial (differential absorption lidar) measurement of atmospheric tracer gas concentration distributions, 12:12237 (R;US)
Development and demonstration of ALARM (airborne lidar agent remote monitor). Final report, 12:12238 (R;US)

AIR PURIFICATION
See AIR CLEANING

AIR QUALITY
Air Conditioners
Factors affecting the control of an air conditioning apparatus, 12:11537 (R;FI;In Finnish)
Buildings
Factors affecting the control of an air conditioning apparatus, 12:11537 (R;FI;In Finnish)
Control Systems
Indoor air quality of a building and the requirement adapted ventilation system, 12:11539 (R;FI;In Finnish)
Emission
Indoor air contaminant sources and calculation of emission rates, 12:11540 (R;FI;In Finnish)

AIR SAMPLERS
Efficiency
Study of the collection efficiency of gummed-film for fission products, 12:12274 (RA;US)

AIR SOURCE HEAT PUMPS
Field Tests
Heat pump experiments using crawl spaces as ground-to-air heat exchangers: Final report, 12:11519 (R;US)

AIRBORNE PARTICLES
See PARTICULATES

AIRBORNE PARTICULATES

ANTIPROTON REACTIONS
Breakup Reactions
Suppression of the annihilation less break-up processes in antiproton - ^4He interaction, 12:12698 (RA;SU;In Russian)

Research Programs
Potential development of advanced power sources from current antiproton technology research, 12:12693 (BA;US)
Total Cross Sections
Suppression of the annihilation less break-up processes in antiproton - ^{4}He interaction, 12:12698 (RA;SU;In Russian)
ANTIPROTONIC ATOMS
See HADRONIC ATOMS
ANTIPROTONS
Production
Potential development of advanced power sources from current antiproton technology research, 12:12693 (BA;US)
ANTI-SATELLITE SYSTEMS
See SPACE WEAPONS
APARTMENT BUILDINGS
Attached Greenhouses
BLAST - Calculation of temperature and energy consumption in Vesterbo (Passive solar heating in renovated apartment buildings, Denmark), 12:11074 (R;DK;In Danish)
Energy Conservation
BLAST - Calculation of temperature and energy consumption in Vesterbo (Passive solar heating in renovated apartment buildings, Denmark), 12:11074 (R;DK;In Danish)
Energy Consumption
Energy consumption for heating of buildings. Unit consumption for energy planning (Denmark), 12:11535 (R;DK;In Danish)
Heat Pumps
The TVA [Tennessee Valley Authority] heat pump financial package is worth considering, 12:11542 (R;US)
Retrofitting
BLAST - Calculation of temperature and energy consumption in Vesterbo (Passive solar heating in renovated apartment buildings, Denmark), 12:11074 (R;DK;In Danish)
Space Heating
Comparison between high-temperature and low-temperature radiator systems. Results from a test project, 12:11533 (R;DK;In Danish)
Water Heaters
Production and distribution of hot utility water in a low-temperature radiator system. Results from a test project, 12:11534 (R;DK;In Danish)
APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES
AQUATIC ECOSYSTEMS
Environmental Transport
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Radionuclide Migration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
AQUIFERS
Uses
Economics, technology, and systems integration of aquifer thermal-energy storage (Demonstration plant at Hoersholm, Denmark), 12:11418 (R;DK)
ARGON
Adsorption Isotherms
Adsorption and desorption of hydrocarbons at low concentrations: Performance report for the period 1 June 1984 to 31 December 1986, 12:11813 (R;US)
Thermal Diffusion
Noble gas-carbon dioxide thermal diffusion factors: anomalous behavior for Ar/$Co_2$1, 12:11740 (J;US)
ARGON 40 BEAMS
Performance Testing
Performance of mechanical scraping tools in ultrahigh vacuum: an XPS study, 12:11679 (J;NL)
ARGON IONS
Electron-Ion Collisions
Electron impact ionization of Ar^{9+}, 12:12587 (R;US)
Energy-Level Transitions
Extreme-ultraviolet beam-foil spectroscopy of highly ionized neon and argon. Doctoral thesis, 12:12583 (R;US)
ARGON METHOD
See ISOTOPE DATING
ARKANSAS POWER-LIGHT-1 REACTOR
See ARKANSAS-1 REACTOR
ARKANSAS-1 REACTOR
Pope, Arkansas, USA
Computerized Control Systems
Experience with the core protection calculator system at Arkansas Nuclear One - Unit 2, 12:11279 (RA;US)
Reactor Protection Systems
Experience with the core protection calculator system at Arkansas Nuclear One - Unit 2, 12:11279 (RA;US)
ARMS CONTROL
Agreements
Soviet noncompliance, 12:11589 (R;US)
Reviews
What has happened to arms control, 12:11447 (BA;US)
Treaties
Soviet noncompliance, 12:11589 (R;US)

QUINONES
Liquid Column Chromatography
Separation and characterization of hydroxyl aromatic in complex fractions from nondistillable coal-derived liquids, 12:10752 (J;US)
Mass Spectroscopy
Separation and characterization of hydroxyl aromatic in complex fractions from nondistillable coal-derived liquids, 12:10752 (J;US)
Molecular Structure
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Synthesis
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
ARRAY PROCESSORS
Programming
Parallel processors and nonlinear structural dynamics algorithms and software. Final Technical report, 1 March-30 October 1986, 12:12995 (R;US)
ARSENIC
Environmental Transport
Environmental chemistry of energy residuals. Final report, January 1, 1983-June 30, 1986, 12:10898 (R;US)
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
ARSENIC OXIDES
Tissue Distribution
In vivo toxicity of arsenic trioxide for human cells in diffusion chambers, 12:12522 (R;US)
Toxicity
In vivo toxicity of arsenic trioxide for human cells in diffusion chambers, 12:12522 (R;US)
ART OBJECTS
See CULTURAL OBJECTS
ARTIFICIAL INTELLIGENCE
Cooperating intelligent agents, 12:13005 (R;US)
Visibility or disability: notes on attention. Technical report, July 1985-May 1986, 12:12980 (R;US)
Expert Systems
RAMBOT (Restructuring Associative Memory Based on Training): a connectionist expert system that learns by example. Technical report, October 1985-April 1986, 12:12976 (R;US)
ASBESTOS
Ground Disposal
Hazardous waste on public lands, 12:12297 (J;US)

ASHES
See also FLY ASH
Adhesion
Surface adhesion of low-rank coal ash: Quarterly report, April 1986-June 1986, 12:10792 (R;US)
Chemical Composition
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)
Chemical Properties
Alkali species characterization for coal-fueled gas turbines, 12:10803 (RA;US)
Comparative Evaluations
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)
Deposition
Alkali species characterization for coal-fueled gas turbines, 12:10803 (RA;US)
Experiments on coal mineral matter deposition from combustion gases, 12:10813 (RA;US)
Mechanism of deposition in coal-fired gas turbine systems, 12:10812 (RA;US)
Melting Points
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)
Performance Testing
Sorption of fuel-bound contaminants for coal and CWM-fired gas turbine systems, 12:10811 (RA;US)
Physical Properties
Alkali species characterization for coal-fueled gas turbines, 12:10803 (RA;US)
ASTATINE 204
Beta-Plus Decay
Determinaton of the sup(204)At beta decay energy, 12:12741 (RA;SU;In Russian)
Electron Capture Decay
Determinaton of the sup(204)At beta decay energy, 12:12741 (RA;SU;In Russian)
ASTRONOMY
Research Programs
Combined ultraviolet studies of astronomical sources. Semiannual Progress report, 1 February-31 July 1986, 12:12571 (R;US)
ASTROPHYSICS
Compton Effect
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Nuclear Physics
Nuclear information needs for the astrophysical s-process, 12:12828 (BA;US)
Some nuclear data needs in astrophysics, 12:12575 (BA;US)
Nucleosynthesis
Nuclear information needs for the astrophysical s-process, 12:12828 (BA;US)
S Process
Nuclear information needs for the astrophysical s-process, 12:12828 (BA;US)
Transport Theory
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
ATMOSPHERIC CIRCULATION
Calculation Methods
Dry deposition parameterization in long range transport models, 12:12248 (R;NL)
ATMOSPHERIC PRECIPITATIONS
Atmospheric Chemistry
Chemistry of atmospheric precipitation at Lewes, Delaware, as part of the MAP3S study, 12:12279 (R;US)

MUONIC ATOMS
Multi-Photon Processes
Multilevel relaxation phenomena and population trapping: [Progress report], July 1, 1984-June 30, 1987, 12:12588 (R;US)
Optical Pumping
Application of laser saturation to the efficient generation of short-wavelength radiation from plasmas. Final report, 1 November 1984-31 October 1985, 12:12942 (R;US)
ATP-ASE
Code numbers 3.6.1.3 and 3.6.1.8.
Protein Structure
Macromolecular organization of F_1-ATPase isolated from Clostridium thermoaceticum as revealed by electron microscopy, 12:12415 (J;US)
ATTACHED GREENHOUSES
Heating Load
International Energy Agency solar heating and cooling program. Task VIII. Passive and hybrid solar low energy buildings. Performance data sources, 12:11072 (R;DK)
ATWS
Anticipated transients without scram.
Transfer Functions
Thermal hydraulic and neutronic interaction in the rotating bed reactor, 12:11234 (D;US)
AURORAE
Electrojets
Parallel current effects on auroral E-region plasma instabilities. Interim report, 12:12577 (R;US)
AURORAL ELECTROJETS
See ELECTROJETS
AURORAL ZONES
Ionosphere
Studies of the auroral-zone ionosphere using the MITHRAS data base. Fiscal years 1983-1985. Final report, October 1982-October 1985, 12:12579 (R;US)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Corrosion
Effect of hydrogenation on corrosion behavior of austenitic stainless steels, 12:11624 (RA;XA)
Crack Propagation
Analysis of cracks in stainless steel TIG [tungsten inert gas] welds, 12:11217 (R;US)
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
Electrochemical Corrosion
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)
Fracture Mechanics
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
Hydrogenation
Effect of hydrogenation on corrosion behavior of austenitic stainless steels, 12:11624 (RA;XA)
Physical Radiation Effects
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)
Reactor Materials
Analysis of cracks in stainless steel TIG [tungsten inert gas] welds, 12:11217 (R;US)
Stress Corrosion
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
AUSTRALITES

Biological Adaptation
The role of membranes and transport in the salt tolerance of halobacteria, 12:12412 (R;US)
Nitrogen Fixation
Dinitrogen fixation in methylotrophic bacteria, 12:12385 (BA;US)
Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System, 12:12426 (RA;BR;In Portuguese)
Physiology of Azospirillum in relation to its utilization as inoculum for promoting growth of plants, 12:12417 (BA;US)
Physiology
Physiology of Azospirillum in relation to its utilization as inoculum for promoting growth of plants, 12:12417 (BA;US)
Preservation
Direct acridine orange counting of bacteria preserved with acidified Lugol iodine, 12:12414 (J;US)
Research Programs
Chemical Biodynamics Division: Annual report, October 1, 1985-September 30, 1986, 12:11872 (R;US)
BACTERIAL DISEASES
Etiology
Etiology of early lifestage diseases, Project 84-44: Final report, 12:12318 (R;US)
BAGASSE
Fuel Supplies
24,65 MW bagasse-fired steam power plant. Demonstration project. Final report, 12:11174 (R;DE;In French and English)
BALANCES
Measuring Methods
Minimization of operator-balance interactive warmup by use of an "alter ego" heat source, 12:12214 (BA;US)
Performance Testing
Minimization of operator-balance interactive warmup by use of an "alter ego" heat source, 12:12214 (BA;US)
BALLISTIC MISSILE DEFENSE
Cost Benefit Analysis
The issues faced by the SDI, 12:12231 (J;US)
Feasibility Studies
The strategic defense initiative: Start of a new era in national defense, 12:12232 (J;US)
Lasers
Lasers and particle beam for fusion and strategic defense, 12:12966 (J;US)
Meetings
Lasers and particle beam for fusion and strategic defense, 12:12966 (J;US)
Particle Beams
Lasers and particle beam for fusion and strategic defense, 12:12966 (J;US)
Planning
The issues faced by the SDI, 12:12231 (J;US)
BALLOONING INSTABILITY
Excitation
Self-excitation of the ballooning tearing mode and the nature of anomalous transport in toroidal magnetic confinement systems, 12:12914 (R;US)
BANKS

BARIUM
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Infrared Spectra
Separations chemistry, 12:11785 (RA;US)
Solvent Extraction
Separations chemistry, 12:11785 (RA;US)

Synergism
Separations chemistry, 12:11785 (RA;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)

BARIUM 135
Charge Distribution
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
Spectral Shift
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
X-Ray Spectra
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)

BARIUM 136
Charge Distribution
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
Spectral Shift
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
X-Ray Spectra
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)

BARIUM 137
Charge Distribution
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
Spectral Shift
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
X-Ray Spectra
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)

BARIUM 138
Charge Distribution
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
Spectral Shift
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)
X-Ray Spectra
Charge distributions of barium isotopes from muonic x-rays, 12:12607 (J;NL)

BARIUM 140
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
Radiochemical characterization of Chernobyl fallout in Europe, 12:12269 (RA;US)

BARIUM 148
Energy Levels
Level structure of /sup 148/Ba: A test of the N/sub p/N/sub n/ scheme far off stability, 12:12724 (J;US)

BARIUM CARBONATES
Catalytic Effects
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)
Labelling
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)

BARIUM CHLORIDES
Thermodynamic Activity
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)

BARLEY
Gamma Radiation
Effect of gamma irradiation (^{60}Co) on quantitative characters of barley (Hordeum vulgare), 12:12491 (RA;BR;In Spanish)
Genetic Radiation Effects
Effect of gamma irradiation (^{60}CO) on qualitative characters of barley (Hordeum vulgare), 12:12476 (RA;BR;In Spanish)

BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Reliability
Reliability study of Solar One, the central receiver pilot plant, 12:11066 (R;US)

BARYON NUMBER 2 RESONANCES

BERYLLIUM 7
Retention
Distribution of label after intragastric administration of ^{7}Be-labeled carbon to weanling and aged mice (42318), 12:12516 (J;US)
Tissue Distribution
Distribution of label after intragastric administration of ^{7}Be-labeled carbon to weanling and aged mice (42318), 12:12516 (J;US)

BERYLLIUM 7 TARGET
Photonuclear Reactions
On the nature of resonances in photonuclear reactions, 12:12815 (R;SU)
BERYLLIUM MODERATORS
See BERYLLIUM
BERYLLIUM OXIDES
Thickness
Electron inelastic mean free path (IMFP) in single crystal BeO by Rutherford backscattering (RBS) and Auger electron spectroscopy (AES), 12:11703 (J;US)
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DOSIMETRY
Research Programs
Status of beta measurement evaluation and upgrade program, 12:12858 (R;US)
BETHE-HEITLER THEORY
One-Dimensional Calculations
Long-range percolation in one dimension, 12:13011 (J;GB)
BETHE-HEITLER-SCHIFF FORMULA
See BETHE-HEITLER THEORY
BEVALAC
Performance
30 years at the fore front - a perspective on the Bevatron/Bevalac, 12:12046 (RA;SU)
BEVATRON
Performance
30 years at the fore front - a perspective on the Bevatron/Bevalac, 12:12046 (RA;SU)
BEVERAGES
Storage Life
Storage study of electrolyte beverage for NBC (nuclear, biological, or chemical) environment. Final technical report, April 1983-April 1985, 12:11917 (R;US)
BGO DETECTORS
Nuclear Reaction Analysis
Iron and sulfur determination in coal using reaction (n,γ) and BGO scintillator, 12:11757 (RA;CS;In Czech)
BIBLIOGRAPHIES
Limited to significant lists of documents chosen on the basis of subject.
Occupational dose reduction at nuclear power plants: Annotated bibliography of selected readings in radiation protection and ALARA, 12:12512 (R;US)
BILLITONITES
See TEKTITES
BIOGAS
See METHANE
BIOLOGICAL MATERIALS
Scanning Electron Microscopy
Circular differential microscopy, 12:12215 (BA;US)
BIOLOGICAL MODELS
Dispersion of radionuclides in the biosphere: First compartment model examples, 12:10981 (R;CH;GE)
BIOLOGICAL WARFARE
Storage study of electrolyte beverage for NBC (nuclear, biological, or chemical) environment. Final technical report, April 1983-April 1985, 12:11917 (R;US)
Protective Clothing
Assessment of the effects of heat and NBC (nuclear, biological, and chemical) protective clothing on performance of critical military tasks. Final report, 12:11916 (R;US)
BIOMASS
Anaerobic Digestion
Anaerobic SBR [Sequencing Batch Reactor] treatment of coal conversion wastewaters: Fifth quarterly report, 12:10757 (R;US)
Conversion
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 1, Project overview: Final report, 12:10993 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 2, A kinetic study of the modified Fischer-Tropsch synthesis over an alumina-supported cobalt oxide catalyst: Final report, 12:10994 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 3, Supervisory control system development for an indirect liquefaction process: Final report, 12:10995 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 5, Microwave heating of fluidized bed reactors: Pyrolysis and calcination applications: Final report, 12:10997 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 6, The modeling and design of a staged indirect liquefaction reactor: Final report, 12:10998 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 4, Slurry phase synthesis of liquid hydrocarbon fuels from biomass pyrolysis gas using iron catalysts: Final report, 12:10996 (R;US)
Liquefaction
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Pyrolysis
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Specific Heat
Thermodynamic data for biomass conversion and waste incineration, 12:11014 (R;US)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Cost Benefit Analysis
Economic competitive power of alternative energy systems for farmsteads, 12:11570 (R;DK;In Danish)
BIOMASS PLANTATIONS
Economics
Large scale trial Storfoersoek Syd. Cultivation of energy forests in the south of Sweden. Report stage 4, 12:11054 (R;SE;In Swedish)
BIOSPHERE
Radionuclide Migration
Dispersion of radionuclides in the biosphere: First compartment model examples, 12:10981 (R;CH;GE)
BIPYRIDINES
Chemical Preparation
Strongly luminescing ruthenium(II)/ruthenium(II) and ruthenium(II)/platinum(II) binuclear complexes, 12:11057 (J;US)
Electron Transfer
Strongly luminescing ruthenium(II)/ruthenium(II) and ruthenium(II)/platinum(II) binuclear complexes, 12:11057 (J;US)
BIRDS
Abundance
Vertebrate fauna of the Idaho National Environmental Research Park, 12:12529 (J;US)
Biological Radiation Effects
Effects of chronic continuous wave microwave radiation (2.45 GHz) on the foraging behavior of the white-throated sparrow, 12:11064 (J;US)
Distribution
Vertebrate fauna of the Idaho National Environmental Research Park, 12:12529 (J;US)
Feeding
Effects of chronic continuous wave microwave radiation (2.45 GHz) on the foraging behavior of the white-throated sparrow, 12:11064 (J;US)
BISMUTH 209 TARGET
Deuteron Reactions
Study on 7.3 GeV deuteron interaction with the ^{93}Nb, ^{159}Tb, ^{202}Pb, sup(207,2)Pb and ^{209}Bi nuclei, 12:12720 (R;SU;In Russian)
Neon 20 Reactions
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)
BISMUTH GERMANATE DETECTORS
See BGO DETECTORS
BITTER SPAR
See DOLOMITE

BITUMENS
Chemical Composition
Three-dimensional laboratory simulation of the hot-gas injection process for tar sand, 12:10895 (R;US)
Physical Properties
Three-dimensional laboratory simulation of the hot-gas injection process for tar sand, 12:10895 (R;US)
Quantitative Chemical Analysis
Isolation and FIMS analysis of saturated hydrocarbons from tar sand bitumens, 12:10896 (J;GB)
Recovery
Three-dimensional laboratory simulation of the hot-gas injection process for tar sand, 12:10895 (R;US)
BITUMINOUS COAL
Calorific Value
Physical simulations of underground coal gasification in an eastern bituminous coal, 12:10705 (R;US)
Chemical Composition
Physical simulations of underground coal gasification in an eastern bituminous coal, 12:10705 (R;US)
Devolatilization
The Distributed-Energy Chain Model for rapid coal devolatilization kinetics. Part II: Transient weight loss correlations, 12:10732 (J;US)
Electron Spin Resonance
Catalyst accessibility in high volatile bituminous coal: Quarterly report, 12:10746 (R;US)
Impregnation
Catalyst accessibility in high volatile bituminous coal: Quarterly report, 12:10746 (R;US)
Quantitative Chemical Analysis
Coal chemistry, 12:10751 (RA;US)
Structural Models
Coal chemistry, 12:10751 (RA;US)
BLADES (COMPRESSOR)
See COMPRESSOR BLADES
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLAST FURNACES
Fuels
Production of blast furnace coke in horizontal chamber ovens from charge blends of less than standard coking quality by a combination of pre-heating and stamping, 12:10727 (R;XE;In German)
BLOWERS
Electric Motors
Improved motors for utility applications: Volume 6, Squirrel-cage rotor analysis: Final report, 12:11935 (R;US)
Energy Consumption
Fan electricity consumption for variable-air-volume systems. Final report, 12:11515 (R;US)
BLUE-GREEN ALGAE
See CYANOBACTERIA
BODY WAVES P (SEISMIC)
See SEISMIC P WAVES
BODY WAVES S (SEISMIC)

BOHUNICE V-2 REACTOR
Trnava, West Slovakia, Czechoslovakia
Primary Coolant Circuits
Diagnostics of primary coolant circuit equipment in nuclear power plants with WWER-440 type reactors in the CSSR, 12:11305 (RA;DD;In German)
BOILER FUEL
See BOILER FUELS
BOILER FUELS
Fuel Substitution
Economic evaluation of microfine coal-water slurry: Final report, 12:10698 (R;US)
Market
Fuel market forecasts, 12:11160 (RA;US)
Fuel oil trends and implications for the crude oil market, 12:11161 (RA;US)
Residual fuel oil market behavior, 12:11162 (RA;US)
Supply and Demand
Effects of international economic factors on fuels planning, 12:11159 (RA;US)
Fuel-use uncertainty and increasing competition, 12:11158 (RA;US)
Uncertainty in utility fuel requirements through 2010, 12:11157 (RA;US)
BOILERS
See also FLUIDIZED BED BOILERS
VAPOR GENERATORS
WASTE HEAT BOILERS
Burners
EPA (Environmental Protection Agency) LIMB (Limestone Injection Multistage Burner) development and demonstration program status report (April 1985). Report for February 1985-June 1986, 12:11191 (R;US)
Burnout
The effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 12:11492 (BA;US)
Cracks
Circumferential cracking of supercritical boiler water-wall tubes: Final report, 12:11155 (R;US)
Deposits
Surface adhesion of low-rank coal ash: Quarterly report, April 1986-June 1986, 12:10792 (R;US)
Water blowing of fireside deposits in coal-fired: Utility boilers: Final report, 12:11154 (R;US)
Economizers
Economisers for gas fired boilers, 12:11562 (RA;GB)
Failure Mode Analysis
Circumferential cracking of supercritical boiler water-wall tubes: Final report, 12:11155 (R;US)
Jets
The effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 12:11492 (BA;US)
Materials
Water blowing of fireside deposits in coal-fired: Utility boilers: Final report, 12:11154 (R;US)
Performance Testing
Operation and maintenance of DOE/PETC Combustion Test Facilities: Quarterly technical progress report for the period July 1, 1986 to September 30, 1986, 12:10825 (R;US)
Temperature Effects
The effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 12:11492 (BA;US)
Tubes
Circumferential cracking of supercritical boiler water-wall tubes: Final report, 12:11155 (R;US)
Welded Joints
Dissimilar-weld failure analysis and development program: Volume 3, Accelerated discriminatory tests: Final report, 12:11119 (R;US)
BOILING
Flow Models
Two-fluid model simulation of density-wave oscillations in a boiling flow system, 12:11993 (J;US)
Two-Phase Flow
Two-fluid model simulation of density-wave oscillations in a boiling flow system, 12:11993 (J;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BONE JOINTS
Performance
Effect of n-implantation on the corrosive-wear properties of surgical Ti-6Al-4V alloy, 12:11675 (J;US)
BOOSTERS (PARTICLE)
See PARTICLE BOOSTERS
BORATES
Specific compounds, except those of significance to energy reserach and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Photoelectron Spectroscopy
Photoelectron spectra of metal tetrakis(methyltrihydroborates) and thorium tetrakis(tetrahydroborate), 12:11897 (J;US)

BOREHOLES
Directional Drilling
Extended reach drilling applications in the North Sea, 12:10847 (RA;NO)
High tech solutions for future North Sea exploration and exploitation challenges. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10841 (R;NO)
Geophysics
Application of borehole geophysics to fracture identification and characterization in low porosity limestones and dolostones, 12:10927 (R;US)
Inclination
Extended reach drilling applications in the North Sea, 12:10847 (RA;NO)
Pressure Measurement
Brine migration test report: Asse Salt Mine, Federal Republic of Germany: Technical report, 12:10924 (R;US)
Temperature Measurement
Brine migration test report: Asse Salt Mine, Federal Republic of Germany: Technical report, 12:10924 (R;US)
BORON
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
BORON 10 TARGET
Photonuclear Reactions
Precise tests for the unitarized pion photoproduction impulse amplitude in exclusive nuclear reactions, 12:12760 (R;US)
BORON 11
Hypernuclei
The weak decay of hypernuclei, 12:12624 (R;US)
BORON ALLOYS
Density
Density of Fe-Si-B metallic glasses, 12:11627 (R;HU)
Internal Friction
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Magnetic Properties
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Mechanical Properties
Property comparison of melt-spun ribbons and consolidated powders of Ni3Al-B, 12:11664 (BA;US)
Metallic Glasses
Superconductivity in rapidly quenched Mo-P-B alloys, 12:11680 (J;GB)
Shear Properties
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Superconductivity
Superconductivity in rapidly quenched Mo-P-B alloys, 12:11680 (J;GB)
BORON FLUORIDES
Chemical Reactions
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)
Synthesis
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)
BORON NITRIDES
Chemical Preparation
Materials chemistry, 12:11723 (RA;US)
BOUNDARY LAYERS
Turbulent Flow
Heat-transfer effects of a longitudinal vortex embedded in a turbulent boundary layer, 12:11976 (RA;US)
BOVINE
See CATTLE
BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAIN
Network Analysis
Self-organization of neural networks, 12:13010 (J;NL)
BRAKING RADIATION

Utility application of simulation software, 12:11362 (RA;US)
Containment Systems
Functionality and leak integrity of containment penetration systems subjected to design basis dynamic loads, 12:11332 (R;US)
Control Rooms
Graphic display development methodology: Volume 2, Appendixes: Final report, 12:11304 (R;US)
Design
Advanced Light Water Reactor Program: Program management and staff review methodology, 12:11380 (R;US)
Design Basis Accidents
Functionality and leak integrity of containment penetration systems subjected to design basis dynamic loads, 12:11332 (R;US)
Engineered Safety Systems
Review of operating experience on Engineered Safety Features Actuating Systems, 12:11330 (R;US)
Fuel Cans
Effect of impurity elements on corrosion behavior of Zircaloy in high temperature steam, 12:11214 (RA;XA)
Evaluation of and improvements in the performance of zircaloy cladding during and after its residence in water cooled nuclear power reactors, 12:11210 (RA;XA)
In-reactor corrosion data on fragema fuel, 12:11209 (RA;XA)
Influence of second phase particles on the nodular corrosion of Zircaloy-2, 12:11211 (RA;XA)
Justification of in-plant waterside corrosion of Zircaloy clad on the basis of thermal and hydraulic calculations, 12:11213 (RA;XA)
Long time out of pile corrosion of Zircaloy-4 in 350°C water, 12:11212 (RA;XA)
Loss of Coolant
Small break critical discharge: The roles of vapor and liquid entrainment in a stratified two-phase region upstream of the break, 12:11406 (R;US)
Pipes
Evaluation of flawed-pipe experiments: Final report, 12:11208 (R;US)
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
Primary Coolant Circuits
Corrosion products release from steel surface into BWR water coolant, 12:11215 (RA;XA)
Effect of hydrogenation on corrosion behavior of austenitic stainless steels, 12:11624 (RA;XA)
Reactor Accidents
Precursors to potential severe core damage accident, 1985: A status report: Appendices D, E, and F, 12:11404 (R;US)
The source term experiments project deposition sample characterization: Interim report, 12:11371 (R;US)
Reactor Control Systems
Fault tolerant digital control systems for boiling water reactors, 12:11276 (RA;US)
Low cost highly available digital control computer, 12:11280 (RA;US)

Reactor Cooling Systems
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Reliability of BWR plant digital control, 12:11272 (RA;US)
Role of microprocessor systems in power plant control, monitoring, and safety, 12:11207 (RA;US)
Reactor Core Disruption
Efficient numerical solution procedure for light water reactor core dynamics, 12:11232 (D;US)
Precursors to potential severe core damage accidents, 1985, a status report: Main report and Appendixes A, B and C, 12:11403 (R;US)
Reactor Internals
Evaluation of BWR top-guide integrity: Final report, 12:11205 (R;US)
Reactor Materials
Analysis of cracks in stainless steel TIG [tungsten inert gas] welds, 12:11217 (R;US)
Reactor Operation
A study of the effects of preventive maintenance and test on nuclear plant availability, 12:11218 (R;US)
Reactor Safety
Advanced Core Monitoring Framework: an overview description, 12:11357 (RA;US)
Benefits of the computerized operator aid systems, 12:11336 (RA;US)
Boiling water reactor Compact Analyzer, 12:11360 (RA;US)
BWR level estimation using Kalman Filtering approach, 12:11344 (RA;US)
BWR shutdown analyzer using artificial intelligence (AI) techniques, 12:11367 (RA;US)
Communication issues and engineering work stations, 12:11364 (RA;US)
Computerized system for active BWR emergency procedures monitoring, 12:11347 (RA;US)
Description and parity space and analytic redundancy techniques, 12:11340 (RA;US)
Digital control technology development, 12:11365 (RA;US)
Display and procedure integration, 12:11350 (RA;US)
Disturbance analysis and surveillance systems (DASS) and performance functions validation, 12:11348 (RA;US)
EPRI/CSDL/Northeast Utilities PC-based demonstration of signal validation, 12:11368 (RA;US)
EPRI perspectives on core monitoring system development and requirements, 12:11351 (RA;US)
GPU plants for signal validation integration with SPDS, 12:11345 (RA;US)
Industry practices for signal validation and EPRI projects, 12:11339 (RA;US)
MMS: EPRI developed simulation software, 12:11358 (RA;US)
Overview of EPRI safety control projects, 12:11334 (RA;US)
PC-based demonstration of BWR reactor vessel level and pressure signal validation, 12:11369 (RA;US)
Post TMI-2 emphasis on digital systems applications, 12:11337 (RA;US)
Review of valve-operator fragility results, 12:11397 (RA;US)
Signature analysis techniques for plant monitoring, 12:11366 (RA;US)
Simulator fidelity evaluation based on training needs, 12:11361 (RA;US)
Software quality - how is it achieved?, 12:11363 (RA;US)
Success path monitoring system: a computerized diagnostic aid for nuclear power plant operators, 12:11349 (RA;US)
Transactions of the Fourteenth Water Reactor Safety Information Meeting, 12:11399 (R;US)
Use of BWR-PSMS to optimize control rod patterns in BWR, 12:11355 (RA;US)
Utility application of simulation software, 12:11362 (RA;US)
Risk Assessment
Review of seismic probabilistic risk assessment and the use of sensitivity analysis, 12:11386 (RA;US)
Seismic Effects
Review of seismic probabilistic risk assessment and the use of sensitivity analysis, 12:11386 (RA;US)
Steam Generators
Evaluation of intergranular attack on Alloy 600: Volume 1, Evaluation of causes: Final report, 12:11617 (R;US)
Valves
Review of valve-operator fragility results, 12:11397 (RA;US)
BYPASSES
Design
Evaluation of turbine bypass systems to facilitate cycling operation, 12:11143 (RA;US)
Modeling of alternative steam bypass systems for hot restarts, 12:11142 (RA;US)
Performance
Evaluation of turbine bypass systems to facilitate cycling operation, 12:11143 (RA;US)

C

C CODES
COBRA-SFS [Spent Fuel Storage]: A thermal-hydraulic analysis computer code: Volume 1, Mathematical models and solution method, 12:10915 (R;US)
Control-C and ACSL for computer-aided control systems engineering, 12:11299 (RA;US)
CUTLASS DDC language, 12:11295 (RA;US)
CABLES (ELECTRIC)
See ELECTRIC CABLES
CADMIUM
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
CADMIUM 106 TARGET
Neutron Reactions
Differential elastic scattering cross sections of cadmium isotopes and p-neutron strength functions in the range 50 < A < 130, 12:12719 (R;SU)
CADMIUM 108 TARGET
Neutron Reactions
Differential elastic scattering cross sections of cadmium isotopes and p-neutron strength functions in the range 50 < A < 130, 12:12719 (R;SU)
CADMIUM 110 TARGET
Neutron Reactions
Differential elastic scattering cross sections of cadmium isotopes and p-neutron strength functions in the range 50 < A < 130, 12:12719 (R;SU)
CADMIUM 112 TARGET
Neutron Reactions
Differential elastic scattering cross sections of cadmium isotopes and p-neutron strength functions in the range 50 < A < 130, 12:12719 (R;SU)
CADMIUM 116 TARGET
Neutron Reactions
Differential elastic scattering cross sections of cadmium isotopes and p-neutron strength functions in the range 50 < A < 130, 12:12719 (R;SU)
CADMIUM 118
U Groups
Example of a U(5) nucleus, 12:12722 (R;US)
Vibrational States
Example of a U(5) nucleus, 12:12722 (R;US)
CADMIUM SULFIDES
Chemical Vapor Deposition
The preparation of thin films for photovoltaic conversion by novel MOCVD [metallorganic chemical vapour deposition] techniques: Annual subcontract report, 15 February 1985-15 April 1986, 12:11047 (R;US)
Electronic Structure
Study of local states in $CdIn_2S_4$, 12:11715 (RA;SU;In Russian)

CALCINATION
Computerized Control Systems
Rate-controlled technique for calcining and drying, 12:11699 (J;US)
CALCITE
Sorptive Properties
Interaction of $Np(V)O_2^+$ with common mineral surfaces in dilute aqueous solutions and seawater, 12:11899 (J;NL)
CALCIUM
Catalytic Effects
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Solvent Extraction
Interfacial chemistry in solvent extraction systems: Progress report for period April 1, 1986-March 31, 1987, 12:11751 (R;US)
CALCIUM 40 TARGET
Carbon 12 Reactions
Total reaction cross section for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb between 10 and 35 MeV/nucleon, 12:12707 (J;US)
Neutron Reactions
Coupled-channel analysis of nucleon scattering from /sup 40/Ca, 12:12710 (BA;US)
Pion Minus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
Pion Plus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
CALCIUM CARBONATES
See also CALCITE
DOLOMITE
Catalytic Effects
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)
Labelling
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)
CALCIUM COMPOUNDS
See also CALCIUM CARBONATES
CALCIUM HYDROXIDES
CALCIUM SULFATES
Catalytic Effects
Sorption of fuel-bound contaminants for coal and CWM-fired gas turbine systems, 12:10811 (RA;US)
CALCIUM FLUORIDES
Crystal Field
Analysis of the lowest 4f→5d two-photon transition in Ce/sup 3+/:CaF_2, 12:12869 (J;US)
Impurities
Analysis of the lowest 4f→5d two-photon transition in Ce/sup 3+/:CaF_2, 12:12869 (J;US)
Multi-Photon Processes
Analysis of the lowest 4f→5d two-photon transition in Ce/sup 3+/:CaF_2, 12:12869 (J;US)
CALCIUM HYDROXIDES
Chemical Reaction Kinetics
Proceedings: 1986 joint symposium on dry SO_2 and simultaneous SO_2/NO/sub x/ control technologies: Volume 1, Sorbents, process research, and dispersion, 12:11187 (R;US)
CALCIUM SULFATES
See also GYPSUM
Crystal Growth
Calcium sulfite and calcium sulfate crystallization: Volume 1, Effect of crystallizer type on gypsum size distribution: Final report, 12:11183 (R;US)
Crystallization
Calcium sulfite and calcium sulfate crystallization: Volume 1, Effect of crystallizer type on gypsum size distribution: Final report, 12:11183 (R;US)
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
CALCULATION METHODS
Air Cleaning
Indoor air contaminant sources and calculation of emission rates, 12:11540 (R;FI;In Finnish)
Emission
Indoor air contaminant sources and calculation of emission rates, 12:11540 (R;FI;In Finnish)
CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS
CALIBRATION STANDARDS
Activation Analysis
Preparation and INAA analysis of reference plant material, 12:11761 (RA;CS;In Czech)
CALIFORNIUM 249
Absorption Spectra
Chemistry of transuranium elements and compounds, 12:11892 (RA;US)
Crystal Structure
Chemistry of transuranium elements and compounds, 12:11892 (RA;US)
Crystal-Phase Transformations
Chemistry of transuranium elements and compounds, 12:11892 (RA;US)
CALIFORNIUM 252
Fission Neutrons
Angular-distribution neutron-emission spectra of niobium following bombardment by fast neutrons, 12:12726 (BA;US)
CALIFORNIUM BROMIDES
Absorption Spectroscopy
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Crystal Structure
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Valence
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
X-Ray Diffraction
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
CALIFORNIUM CHLORIDES
Absorption Spectroscopy
Absorption spectrophotometric and X-ray diffraction studies of the trichlorides of berkelium-249 and californium-249, 12:11896 (J;US)
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Crystal Structure
Absorption spectrophotometric and X-ray diffraction studies of the trichlorides of berkelium-249 and californium-249, 12:11896 (J;US)
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Valence
Absorption spectrophotometric and X-ray diffraction studies of the trichlorides of berkelium-249 and californium-249, 12:11896 (J;US)
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
X-Ray Diffraction
Absorption spectrophotometric and X-ray diffraction studies of the trichlorides of berkelium-249 and californium-249, 12:11896 (J;US)
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
CALIFORNIUM FLUORIDES
Absorption Spectroscopy
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Crystal Structure
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Valence
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)

X-Ray Diffraction
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)

CALIFORNIUM IODIDES
Absorption Spectroscopy
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Crystal Structure
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
Valence
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)
X-Ray Diffraction
Characterization of anhydrous transcurium halides by absorption spectrophotometry, 12:11900 (J;IL)

CALIFORNIUM IONS
Chemical Reaction Kinetics
Rate Constants for Reactions of Radiation-Produced Transients in Aqueous Solutions of Actinides, 12:11886 (J;US)

CALIFORNIUM OXIDES
Magnetic Properties
Chemistry of transuranium elements and compounds, 12:11892 (RA;US)

CALORIMETRIC DOSEMETERS
Calorimetric dose measurements and calorimetric system developed for the Armed Forces Radiobiology Research Institute. Contract report, 12:12194 (R;US)

CALVERT CLIFFS-1 REACTOR
Lusby, Maryland, USA
Steam Generators
Calvert Cliffs Unit 1 tube examination: Final report, 12:11220 (R;US)

CALVIN CYCLE SPECIES
Carbon Dioxide Fixation
Regulation of photosynthetic CO_2 assimilation and crop yield, 12:12393 (BA;US)
Photosynthesis
Metabolic modifications of crassulacean acid metabolism - CAM-idling and CAM-cycling, 12:12396 (BA;US)

CANADA
Coal Mines
An evaluation of 9 East's monolithic packing as a gob sealant, 12:10779 (R;CA)
Gob leakage in 8 East at Lingan colliery, 12:10774 (R;CA)
Coal Preparation Plants
Canadian coal preparation plants, 12:10695 (R;CA;In English, French, German and Russian)
Energy Policy
Canadian energy export policy, 12:11464 (RA;US)
Energy Sources
Canadian energy export policy, 12:11464 (RA;US)
Interconnected Power Systems
Canadian electricity purchases by northeastern utilities, 12:11470 (RA;US)
Midwest electric energy imports, 12:11471 (RA;US)
Power Generation
Regional electricity exports: current status and overview of the issues, 12:11469 (RA;US)
Radioactive Waste Disposal
Advanced containment research for the Canadian Nuclear Fuel Waste Management Program, 12:10921 (R;CA)
Underground Mining
Less conventional methods for mining underground coal, 12:10781 (R;CA)

CANCER
See NEOPLASMS

CANDU TYPE REACTORS
Computerized Control Systems
Canadian nuclear power plant computer control and the application of microprocessors, 12:11268 (RA;US)
Computerized plant protection systems in CANDU reactors, 12:11267 (RA;US)
Reactor Shutdown
Computerized plant protection systems in CANDU reactors, 12:11267 (RA;US)

CANISTERS
See CONTAINERS

CANONICAL EQUATIONS
See DIFFERENTIAL EQUATIONS

CAPACITORS
Dielectric Properties
Piezoelectric measurements on ceramic multilayer capacitors, 12:12004 (J;US)
Insulating Oils
Polychlorinated dibenzofurans (PCDF) and polychlorinated dibenzo-p-dioxins (PCDD) in utility transformers and capacitors: Volume 1, Formation of PCDF and PCDD in askarels and contaminated mineral oil equipment: Final report, 12:11200 (R;US)

CAPSULES (IRRADIATION)
See IRRADIATION CAPSULES

CARBAMIDE
See UREA

CARBAZOLES
Combustion Heat
Thermochemical and thermophysical properties of organic nitrogen compounds found in fossil materials: Status report, 12:11819 (R;US)
Deuteration
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, July 15-October 15, 1986, 12:10724 (R;US)
Mass Spectra
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, July 15-October 15, 1986, 12:10724 (R;US)
Specific Heat
Thermochemical and thermophysical properties of organic nitrogen compounds found in fossil materials: Status report, 12:11819 (R;US)
Vapor Pressure
Thermochemical and thermophysical properties of organic nitrogen compounds found in fossil materials: Status report, 12:11819 (R;US)

CARBENES
Chemical Preparation
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)
Structural Chemical Analysis
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)

CARBIDES
See also SILICON CARBIDES
TANTALUM CARBIDES
Molecular Structure
Methylene: a paradigm for computational quantum chemistry, 12:11844 (J;US)

CARBINOL
See METHANOL

CARBON
See also ACTIVATED CARBON
CARBON BLACK
GRAPHITE
Electrochemistry
Experimental investigation of a porous carbon electrode for the removal of mercury from contaminated brine, 12:11423 (J;US)
Gasification
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)
Kerma
Carbon Kerma factor for 18- and 20-MeV neutrons, 12:12847 (J;US)
Microstructure
Optimization of the texture of carbon in coke, 12:10750 (R;XE)
Pion Minus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A $\rightarrow$ pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)

Pion Plus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A → pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
Production
Development of thin foils for use in generating neutral particle beams, 12:11608 (R;US)
Sputtering
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
Texture
Optimization of the texture of carbon in coke, 12:10750 (R;XE)
Thermal Diffusion
Application of variation method to multicomponent thermal diffusion in solid phase, 12:11620 (R;SU;In Russian)
CARBON 12
Cluster Model
Study on the monopole excited states of sup(12)C nucleus in the frameworks of the 3α-particle model, 12:12781 (RA;SU;In Russian)
Giant Resonance
Study on the monopole excited states of sup(12)C nucleus in the frameworks of the 3α-particle model, 12:12781 (RA;SU;In Russian)
Hypernuclei
The weak decay of hypernuclei, 12:12624 (R;US)
CARBON 12 REACTIONS
Elastic Scattering
Total reaction cross section for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb between 10 and 35 MeV/nucleon, 12:12707 (J;US)
CARBON 12 TARGET
Carbon 12 Reactions
Total reaction cross section for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb between 10 and 35 MeV/nucleon, 12:12707 (J;US)
Deuteron Reactions
Relativistic deuteron fragmentation into proton and the deuteron structure at small distances, 12:12812 (R;SU;In Russian)
Electron Reactions
[Medium energy physics at Syracuse University: Technical progress report], 12:12697 (R;US)
Excitation and de-excitation of magnetic resonances in the sup(12)C(e,e'X) reaction, 12:12805 (RA;SU;In Russian)
Lanthanum 139 Reactions
[Studies of heavy-ion induced reactions]: Annual progress report, 12:12702 (R;US)
Neutron Reactions
Observation of anti D-mesons in nC-interactions at 40-70 GeV/c, 12:12705 (R;SU)
Photonuclear Reactions
Precise tests for the unitarized pion photoproduction impulse amplitude in exclusive nuclear reactions, 12:12760 (R;US)
Pion Minus Reactions
Universality of hadron jets in soft and hard particle interactions at high energies, 12:12635 (R;SU)
Proton Reactions
318 and 800 MeV (p,xn) cross sections, 12:12742 (BA;US)
CARBON 13 TARGET
Photonuclear Reactions
Precise tests for the unitarized pion photoproduction impulse amplitude in exclusive nuclear reactions, 12:12760 (R;US)
CARBON 14
Isotope Ratio
Ground Water movement in crystalline rock aquifers (State of Ceara, Brazil), 12:12284 (R;BR;In Portuguese)
CARBON 14 COMPOUNDS
Scintillation Counting
Recovery of organic carbon from atmospheric particulate matter using soxhlet extraction with the benzene/methanol azeotrope, 12:12276 (J;US)
CARBON 14 TARGET
Electron Reactions
Partial channels of photo- and electrodisintegration of a sup(14)C nucleus, 12:12804 (RA;SU;In Russian)
Photonuclear Reactions
Partial channels of photo- and electrodisintegration of a sup(14)C nucleus, 12:12804 (RA;SU;In Russian)
CARBON BLACK
Labelling
Distribution of label after intragastric administration of ^{7}Be-labeled carbon to weanling and aged mice (42318), 12:12516 (J;US)
CARBON COMPOUNDS
See also CARBIDES
Metabolism
Characterization of carbon metabolism in Rhizobium japonicum bacteroids, 12:12374 (BA;US)
CARBON CYCLE
Biological Pathways
Oxidative photosynthetic carbon cycle and peroxisomal glycolate metabolism, 12:12392 (BA;US)
CARBON DIOXIDE
Biological Effects
Nutrient uptake and growth responses of Virginia pine to elevated atmospheric carbon dioxide (Pisolithus tinctorius, Pinus virginiana Mill), 12:12528 (J;US)
Cost
Coproduction of carbon dioxide (CO_2) and electricity: Final report, 12:10853 (R;US)
Demand
Coproduction of carbon dioxide (CO_2) and electricity: Final report, 12:10853 (R;US)
Desorption
Ion-stimulated gas desorption from stainless steel and copper surfaces under high vacuum, 12:11623 (RA;SU;In Russian)
Emission
Uncertainty in future global energy use and fossil fuel CO_2 emissions, 1975 to 2075, 12:12244 (R;US)
Environmental Impacts
Studies of climatic variability during the period of instrumental records: Second annual report, 12:12243 (R;US)
Greenhouse Effect
A modeling study of pulverized coal combustion in CO_2/O_2 atmospheres, 12:10790 (R;US)
Indoor Air Pollution
Health-hazard evaluation report HETA 84-248-1694, Wasson Elementary School, Dubois, Pennsylvania, 12:12251 (R;US)
Partial Pressure
Optrodes for in-vivo real time monitoring of /sub p/O/sub 2/ and /sub p/CO/sub 2/ in blood, 12:12429 (BA;US)
Production
Coproduction of carbon dioxide (CO_2) and electricity: Final report, 12:10853 (R;US)
Recycling
A modeling study of pulverized coal combustion in CO_2/O_2 atmospheres, 12:10790 (R;US)
Solvent Properties
Entrainer effects in high pressure separation processes: Quarterly technical progress report for period September 15, 1986 to December 14, 1986, 12:11753 (R;US)
Thermal Diffusion
Noble gas-carbon dioxide thermal diffusion factors: anomalous behavior for Ar/Co_2[1], 12:11740 (J;US)
Uptake
Metabolic modifications of crassulacean acid metabolism - CAM-idling and CAM-cycling, 12:12396 (BA;US)
Waste Product Utilization
A modeling study of pulverized coal combustion in CO_2/O_2 atmospheres, 12:10790 (R;US)
CARBON DIOXIDE FIXATION
Characteristics of CO_2 fixation and productivity of corn and soybeans, 12:12397 (BA;US)
Stoichiometry
Stoichiometry of CO_2 evolution during photorespiratory carbon flow, 12:12390 (BA;US)
CARBON DIOXIDE INJECTION
Cost Benefit Analysis
The potential of enhanced oil recovery by carbon dioxide flooding in New Mexico: Final technical report, 12:10857 (R;US)

CARBON DIOXIDE LASERS
Gain
Population inversion and gain measurements for soft x-ray laser development in a magnetically confined plasma column. Final progress report, 1 November 1983-30 September 1985, 12:11952 (R;US)
CARBON FIBERS
Interactions
Fiber-matrix interactions in carbon-fiber/cement matrix composites. Technical report, 12:11705 (R;US)
CARBON MONOXIDE
Absorption Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
Air Pollution
Low emission combustor technology, 12:10798 (RA;US)
Air Pollution Control
Emission control equipment for residential coal-fire stove: Final project, 12:12245 (R;US)
Chemisorption
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Synchrotron radiation photoemission studies of CO chemisorption on Pt/Ta(110) and Ni/Ta(110), 12:11602 (R;US)
Trifunctional catalysts for conversion of syngas to alcohols: Ninth quarterly report for period September 1 to November 30, 1986, 12:10719 (R;US)
Desorption
Ion-stimulated gas desorption from stainless steel and copper surfaces under high vacuum, 12:11623 (RA;SU;In Russian)
Environmental Policy
Consequences of environmental policy for private passenger transport, 12:11587 (R;NL;DU)
Hydrogenation
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Effects of dispersion and support on adsorption, catalytic and electronic properties of cobalt/alumina CO hydrogenation catalysts: [Technical progress report], 12:11812 (R;US)
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Model catalytic systems: Reactions of small molecules (C_4H_9OH, NH_3,CO,H_2) on transition metal surfaces, 12:11817 (R;US)
Trifunctional catalysts for conversion of syngas to alcohols: Ninth quarterly report for period September 1 to November 30, 1986, 12:10719 (R;US)
Spectrophotometry
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
Vibrational States
C=O stretching vibration of CO on Ni(100) by infrared emission spectroscopy, 12:11856 (J;NL)
X-Ray Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
CARBON STEELS
Gas Tungsten-Arc Welding
Weld energy reduction by using concurrent nondestructive evaluation: Final report, 12:11243 (R;US)
CARBONIC ACID ESTERS
Solvent Properties
Solvent selectivity studies using isomers of polystyrene, 12:11860 (J;NL)
CARBONYLS
Only for compounds of metals with carbonyl radicals.
Chemical Reactions
Transition-metal cluster ions in the gas phase. Oxide chemistry of dimeric and trimeric clusters containing iron and cobalt, 12:11846 (J;US)
Molecular Structure
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Synthesis
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Insertion of $SnCl_2$ into an Os-Os bond of $Os_3(CO)_{11}(\mu\text{-}CH_2)$ to give the planar cluster $Os_3SnCl_2(CO)_{11}(\mu\text{-}CH_2)$ with a pentacoordinate tin atom, 12:11838 (J;US)
CARBOXYLASE
Enzyme Activity
Analysis of Chlamydomonas reinhardii mutants and defects in the CO_2 concentrating system, 12:12394 (BA;US)
CARCINOGEN SCREENING
Performance
Testing systems for biologic markers of genotoxic exposure and effect, 12:12527 (R;US)
CARCINOGENS
Indoor Air Pollution
Health-hazard evaluation report HETA 85-407-1692, Parkway Products, Inc., Cincinnati, Ohio, 12:12253 (R;US)
CARPOOLING
See also VANPOOLING
Economic Analysis
Economic analysis of vehicle-sharing mode for journey to work by Indonesian office employees. Master's thesis, 12:11547 (R;US)
CASCADES (NUCLEAR)
See NUCLEAR CASCADES
CASINGS (WELL)
See WELL CASINGS
CASTE (INSECTS)
See INSECTS
CASTING
Tracer Techniques
Application of radioisotope tracers in the study of continuous steel casting, 12:11775 (RA;CS;In Czech)
CATALYSTS
See also ELECTROCATALYSTS
Calcination
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 5, Microwave heating of fluidized bed reactors: Pyrolysis and calcination applications: Final report, 12:10997 (R;US)
Chemical Preparation
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
Deactivation
Fischer-Tropsch synthesis from a low HH_2:CO gas in a dry fluidized-bed system. Volume 1. Project summary. Final technical report, October 1, 1986, 12:10713 (R;US)
Improved catalysts for coal liquefaction: Quarterly report number 9 for the period September 1, 1986 to November 30, 1986, 12:10721 (R;US)
Performance Testing
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
Promoters
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Trifunctional catalysts for conversion of syngas to alcohols: Ninth quarterly report for period September 1 to November 30, 1986, 12:10719 (R;US)
Regeneration
Improved catalysts for coal liquefaction: Quarterly report number 9 for the period September 1, 1986 to November 30, 1986, 12:10721 (R;US)

Structural Chemical Analysis
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)

CATALYTIC HYDROSOLVATION PROCESS
Bench-Scale Experiments
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)

CATECHOLAMINES
Anaerobic Digestion
Anaerobic SBR [Sequencing Batch Reactor] treatment of coal conversion wastewaters: Fifth quarterly report, 12:10757 (R;US)

CATHODES
Dissolution
Nickel transport in molten carbonate fuel cell electrolytes: Final report, 12:11504 (R;US)

CATION EXCHANGE CAPACITY
See CATIONS

CATIONS
Infrared Spectra
Methylene: a paradigm for computational quantum chemistry, 12:11844 (J;US)

CATTLE
Biological Adaptation
Regional environmental simulation of African cattle herding societies, 12:11440 (J;US)
Forage
Regional environmental simulation of African cattle herding societies, 12:11440 (J;US)
Population Dynamics
Regional environmental simulation of African cattle herding societies, 12:11440 (J;US)

CAUSTIC FLOODING
Evaluation
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)

CAVITATION
Pressure Dependence
Mechanism for the generation of cavitation maxima by pulsed ultrasound, 12:12901 (J;US)

CAVITIES
See also BOREHOLES
CRATERS
Natural Convection
Examination of mixed and natural convection in a cavity, 12:11978 (RA;US)
Stress Analysis
Energetics of interacting defects, 12:11926 (RA;US)

CAVITY RESONATORS
Harmonics
Third harmonic flattopping in the TRIUMF rf cavity, 12:12074 (R;CA)

CELL GROWTH (PLANT)
See PLANT CELLS

CELL WALL
Chemical Composition
Cell-wall immunochemistry of the archaebacterium Methanosarcina barkeri strain 227 probed with monoclonal antibodies, 12:12421 (J;US)
Immunogenicity of methanococcaceae and monoclonal antibody survey of their antigenic markers and relationships, 12:12419 (J;US)
Structural Chemical Analysis
Immunochemical identification of three proteinic determinants on the archaebacterium Methanococcus vannielii by monoclonal antibodies, 12:12420 (J;US)

CELLS (BACTERIAL)
See BACTERIA

CELLS (PLANT)
See PLANT CELLS

CELLULOSE
Conversion
Development of a process to produce chemicals from lignocellulose. Final report, 12:11555 (R;US)
Energy Recovery
Energy and chemical recovery by straw pulp manufacturing, 12:11569 (R;DK;In Danish)

CEMENTS
Pelletizing
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)

CENTRAL RECEIVER POWER PLANTS
See TOWER FOCUS POWER PLANTS

CENTRAL RECEIVERS
Research Programs
Solar Thermal Technology Program bibliography, 1973-1985, 12:11068 (R;US)

CENTRIFUGAL PUMPS
Computer-Aided Design
Optimum wearing high efficiency design of phosphate slurry pumps, 12:10789 (BA;US)
Materials
Optimum wearing high efficiency design of phosphate slurry pumps, 12:10789 (BA;US)
Wear Resistance
Optimum wearing high efficiency design of phosphate slurry pumps, 12:10789 (BA;US)

CERAMICS
Calcination
Rate-controlled technique for calcining and drying, 12:11699 (J;US)
Calibration Standards
Establishment of accuracy limits and standards for comparative thermal conductivity measurements[1], 12:11693 (J;US)
Compacting
Processing science to increase the reliability of ceramics. Final report, 1 July 1984-31 March 1986, 12:11685 (R;US)
Deformation
Effect of capillarity and pore-size distributions on pore and cavity growth, 12:11696 (BA;US)
Drying
Rate-controlled technique for calcining and drying, 12:11699 (J;US)
Grain Boundaries
Combined grain-boundary and lattice diffusion in fine-grained ceramics, 12:11310 (BA;US)
Inclusions
Ultrasonic NDE of green-state ceramic using focused through-transmission, 12:11997 (R;US)
Microstructure
Microstructure of lead-magnesium niobate ceramics, 12:11691 (J;US)
Molding
Wetting and dispersion in ceramic/polymer melt injection molding systems: Progress report, 12:11687 (R;US)
Porosity
Effect of capillarity and pore-size distributions on pore and cavity growth, 12:11696 (BA;US)
Seals
Chemistry of glass-ceramic to metal bonding for header applications: 2. Hydrogen bubble formation during glass-ceramic to metal sealing, 12:11595 (R;US)
High strength glass-ceramic to metal seals, 12:11594 (R;US)
Stresses
Effect of capillarity and pore-size distributions on pore and cavity growth, 12:11696 (BA;US)
Testing
Evaluation of three high-temperature particle control devices for coal gasification, 12:10736 (BA;GB)
Thermal Conductivity
Establishment of accuracy limits and standards for comparative thermal conductivity measurements[1], 12:11693 (J;US)
Ultrasonic Testing
Ultrasonic NDE of green-state ceramic using focused through-transmission, 12:11997 (R;US)

CERATITIS CAPITATA
Pest Control
Review and present status of the medfly program in Mexico, 12:12487 (RA;BR)
Review and present status of the medfly program in Mexico, 12:12506 (RA;BR)
CERIUM
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
CERIUM 140 TARGET
Pion Minus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
Pion Plus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
CERIUM 141
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
Radiochemical characterization of Chernobyl fallout in Europe, 12:12269 (RA;US)
CERIUM BORIDES
Magnetic Properties
Dehybridization of the 4f shell in Si-substituted $CeRh_3B_2$, 12:11689 (J;US)
CERIUM CARBONATES
Decarboxylation
X-ray photoelectron and infrared spectroscopic studies of the decarboxylation/oxidation of cerium(III) carbonate octahydrate, 12:11747 (J;GB)
Oxidation
X-ray photoelectron and infrared spectroscopic studies of the decarboxylation/oxidation of cerium(III) carbonate octahydrate, 12:11747 (J;GB)
CERIUM SILICIDES
Magnetic Properties
Dehybridization of the 4f shell in Si-substituted $CeRh_3B_2$, 12:11689 (J;US)
CERMETS
Thermal Conductivity
Determination of thermal conductivity from specific heat and thermal diffusivity measurements of plasma-sprayed cermets, 12:12967 (J;US)
CERN SYNCHROCYCLOTRON
Superconducting Magnets
Magnet research and development for the CERN large hadron collider, 12:12081 (RA;US)
Niobium-tin wire development according to the ECN powder method, 12:12106 (RA;US)
Preliminary study of a superfluid helium cryogenic system for the large hadron collider, 12:12130 (RA;US)
S.C.K./C.E.N. critical current set-up, 12:12111 (RA;US)
CESIUM
Adsorption
Nuclear waste chemistry, 12:12559 (RA;US)
Atom Transport
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Solvent Extraction
Separations chemistry, 12:11785 (RA;US)
Synergism
Separations chemistry, 12:11785 (RA;US)
CESIUM 134
Adsorption
Chemical characterization, leach, and adsorption studies of solidified low-level wastes, 12:10979 (R;US)
Radioecological Concentration
Characterization of radionuclides in North American and Hawaiian surface air and deposition following the Chernobyl accident, 12:12268 (RA;US)
Concentrations of ^{131}I, ^{134}Cs, and ^{137}Cs in milk in the New York metropolitan area following the Chernobyl reactor accident, 12:12304 (RA;US)
Measurement of Chernobyl fallout activity in grass and soil at Chester, New Jersey, 12:12303 (RA;US)
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
Particle size distribution of Chernobyl related aerosols in New York City, 12:12272 (RA;US)
Radiochemical characterization of Chernobyl fallout in Europe, 12:12269 (RA;US)
CESIUM 136
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
CESIUM 137
Adsorption
Chemical characterization, leach, and adsorption studies of solidified low-level wastes, 12:10979 (R;US)
Atom Transport
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Coprecipitation
Concentration and separation of selected radionuclides from water samples by coprecipitation, 12:11773 (RA;CS;In Czech)
Radioecological Concentration
Characterization of radionuclides in North American and Hawaiian surface air and deposition following the Chernobyl accident, 12:12268 (RA;US)
Concentrations of ^{131}I, ^{134}Cs, and ^{137}Cs in milk in the New York metropolitan area following the Chernobyl reactor accident, 12:12304 (RA;US)
Measurement of Chernobyl fallout activity in grass and soil at Chester, New Jersey, 12:12303 (RA;US)
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
Particle size distribution of Chernobyl related aerosols in New York City, 12:12272 (RA;US)
Strontium-90 and cesium-137 in sea fish (from June 1982 to December 1982). Environmental and dietary materials, 12:12335 (RA;JP)
Strontium-90 and cesium-137 in vegetables (consuming districts) (from September 1982 to December 1982). Environmental and dietary materials, 12:12306 (RA;JP)
Radioecology
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Sorption
Engineered sorbent barriers for low-level waste disposal, 12:10951 (R;US)
CESIUM 148
Beta-Minus Decay
Level structure of /sup 148/Ba: A test of the N/sub p/N/sub n/ scheme far off stability, 12:12724 (J;US)
CESIUM CHLORIDES
Thermodynamic Activity
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)
CESIUM IODIDES
Chemical Reactions
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:11401 (R;US)
Gruenelsen Constant
Hugoniot overtake sound-velocity measurements on CsI, 12:11734 (J;US)

Sound Waves
Hugoniot overtake sound-velocity measurements on CsI, 12:11734 (J;US)
Thermodynamic Properties
Hugoniot overtake sound-velocity measurements on CsI, 12:11734 (J;US)
CESIUM SULFATES
Thermodynamic Activity
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)
CFFF

CHARGED-PARTICLE TRANSPORT
Algorithms
A flux-limited diffusion model for charged-particle transport, 12:12845 (J;US)
Mathematical Models
A flux-limited diffusion model for charged-particle transport, 12:12845 (J;US)
CHARGED-PARTICLE TRANSPORT THEORY
Finite Element Method
A finite element projection method for the solution of particle transport problems, 12:12848 (J;US)
Ritz Method
A finite element projection method for the solution of particle transport problems, 12:12848 (J;US)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Chemical Reaction Yield
The Distributed-Energy Chain Model for rapid coal devolatilization kinetics. Part II: Transient weight loss correlations, 12:10732 (J;US)
The distributed-energy chain model for rapid coal devolatilization kinetics. Part I: Formulation, 12:10733 (J;US)
Combustion
Kinetics of coal combustion: Seventh quarterly report, 12:10824 (R;US)
Gasification
Active sites in char gasification: Quarterly technical progress report, 1 July 1986-30 September 1986 (Phenol-formaldehyde resin char), 12:10716 (R;US)
Heat Treatments
Effect of in-situ heat treatment on coal char reactivity. Final report, March 15, 1984-March 14, 1986. Part 2, 12:10823 (R;US)
Oxidation
Active sites in char gasification: Quarterly technical progress report, 1 July 1986-30 September 1986 (Phenol-formaldehyde resin char), 12:10716 (R;US)
Removal
Performance evaluation of a ceramic fabric bag filter on a bench-scale coal gasifier: Final report, 12:11180 (R;US)
Temperature Measurement
Effect of in-situ heat treatment on coal char reactivity. Final report, March 15, 1984-March 14, 1986. Part 2, 12:10823 (R;US)
CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
ELECTRON MICROPROBE ANALYSIS
NUCLEAR REACTION ANALYSIS
Manuals
Practical concepts in the documentation of analytical methods, 12:10755 (BA;US)
CHEMICAL COMPOSITION
Information Systems
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, October-December 1986 (Foreign), 12:10771 (R;US)
CHEMICAL EFFLUENTS
Toxicity
Bull Run Fossil Plant toxicity biomonitoring study, 12:12526 (R;US)
CHEMICAL INDUSTRY
Hazardous Materials
Health-hazard evaluation report HETA 85-407-1692, Parkway Products, Inc., Cincinnati, Ohio, 12:12253 (R;US)
Health0hazard evaluation report HETA 84-132-1703, Purex Industrial Division, Marion, Ohio, 12:12257 (R;US)
CHEMICAL LASERS
Feasibility Studies
Red SOX (singlet oxygen) laser: a chemically-pumped, 0.76-micrometer singlet oxygen laser. Final report, 1 July-31 December 1985, 12:11950 (R;US)
CHEMICAL REACTORS
Chemical Reactions
Characterization of chaotic processes, 12:11975 (RA;US)
Efficiency
Performance of annular membrane and screen-tee reactors for postcolumn-reaction detection of metal ions separated by liquid chromatography, 12:11790 (J;US)
Performance
Performance of annular membrane and screen-tee reactors for postcolumn-reaction detection of metal ions separated by liquid chromatography, 12:11790 (J;US)
CHEMICAL VAPOR DEPOSITION
Technology Transfer
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
CHEMICAL WARFARE
Storage study of electrolyte beverage for NBC (nuclear, biological, or chemical) environment. Final technical report, April 1983-April 1985, 12:11917 (R;US)
Military Strategy
Combat casualities in a conventional and chemical warfare environmenmt, 12:11591 (R;US)
Protective Clothing
Assessment of the effects of heat and NBC (nuclear, biological, and chemical) protective clothing on performance of critical military tasks. Final report, 12:11916 (R;US)
Physiological assessments of chemical-threat protective patient wraps in three environments. Manuscript report, 12:11920 (R;US)

Corrosive Effects
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)

CHLORINATED ALIPHATIC HYDROCARBONS
See also CHLOROFORM

Ecological Concentration
Testing and sampling of existing wells in the vicinity of Lawrence Livermore National Laboratory and Sandia National Laboratories, Livermore, California: Final report (Trichloroethylene, perchloroethylene), 12:12330 (R;US)

Sampling
Testing and sampling of existing wells in the vicinity of Lawrence Livermore National Laboratory and Sandia National Laboratories, Livermore, California: Final report (Trichloroethylene, perchloroethylene), 12:12330 (R;US)

CHLORINATED AROMATIC HYDROCARBONS

Gas Chromatography
Field evaluation of the S-Cubed model PCBA-102 PCB [polychlorinated biphenyl] analyzer: Final report, 12:12211 (R;US)

Photolysis
Laser flash photolysis of chlorobenzene in polar solvents, 12:11879 (J;CH)

Solubility
Hydrophobic sorption of polar organics by low organic carbon soils, 12:12298 (J;NL)

CHLORINATION

Activation Analysis
Application of gamma spectrometry in studying tantalum carbide chlorination, 12:11774 (RA;CS;In Czech)

Environmental Impacts
Chlorination/dechlorination studies relating to proposed cooling towers for K and C reactors, 12:12336 (R;US)

CHLORINE

Corrosive Effects
Chloride induced corrosion in the generation and processing of gas produced from hard coal by the Lurgi high pressure gasification process, 12:10741 (TJ;GB)

CHLORINE CHLORIDES
See CHLORINE

CHLOROFORM

Solvent Properties
Entrainer effects in high pressure separation processes: Quarterly technical progress report for period September 15, 1986 to December 14, 1986, 12:11753 (R;US)
Solvent selectivity studies using isomers of polystyrene, 12:11860 (J;NL)

CHLOROPHYLL

Oxidation
High-performance liquid chromatographic study of the chlorophyll allomerization reaction, 12:11861 (J;NL)

CHLOROPHYLL-BINDING PROTEINS

Biosynthesis
Nitrogen control of photosynthetic protein synthesis, 12:11026 (R;US)

Fractionation
[Analysis of cyanobacterial photosystem 2 genes by cloning and mutagenesis]: Progress report, May 1986 to December 1986, 12:11028 (R;US)

CHO CELLS

DNA Repair
DNA repair genes of mammalian cells, 12:12358 (J;US)

Mutants
DNA repair genes of mammalian cells, 12:12358 (J;US)

CHROMATIN

Molecular Biology
[Impact of energy related pollutants on chromosome structure]: Progress report, 12:12344 (R;US)

CHROMIUM

Anodization
Electrode studies in molten salts: Final report for the period June 1, 1984-May 31, 1986, 12:11868 (R;US)

Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)

Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)

Hardening
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)

Hydrolysis
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)

Oxidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)

Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)

Sulfidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)

Superlattices
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)

X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
The determination by x-ray fluorescence of platinum, palladium, ruthenium, iron, and chromium in special steels, 12:11780 (R;ZA)

CHROMIUM 50 TARGET

Neutron Reactions
Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru, 12:12711 (BA;US)

CHROMIUM 52 TARGET

Neutron Reactions
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)

CHROMIUM ALLOYS
See also ALLOY-A-286
ALLOY-IN-100
CHROMIUM STEELS
NICKEL-CHROMIUM STEELS
STAINLESS STEELS

Corrosion
Ordering behavior and corrosion properties of Ni-Mo and Ni-Mo-Cr alloys, 12:11668 (BA;US)

Ion Implantation
High spatial resolution AEM observations of yttrium segregation in chromia scales growth on Co-45%Cr, 12:11613 (R;US)

Order-Disorder Transformations
Ordering behavior and corrosion properties of Ni-Mo and Ni-Mo-Cr alloys, 12:11668 (BA;US)

Oxidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)

Scaling
High spatial resolution AEM observations of yttrium segregation in chromia scales growth on Co-45%Cr, 12:11613 (R;US)

Sulfidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)

CHROMIUM COMPLEXES

Chemical Preparation
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)

Electron Transfer
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)
Oxidation
Metal arene complexes in coal structure determination: Quarterly report for the period, September 1986-November 1986 (Arenetricarbonylchromium complex anion; arene iron complex anion), 12:10745 (R;US)

CHROMIUM STEELS
See also CHROMIUM-MOLYBDENUM STEELS
Corrosion
Erosion-corrosion mechanisms and rates in Fe - Cr steels, 12:10739 (BA;US)
Erosion
Erosion-corrosion mechanisms and rates in Fe - Cr steels, 12:10739 (BA;US)

CHROMIUM-MOLYBDENUM STEELS
Chemical Composition
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)
Elongation
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)
Hardness
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)
Tempering
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)
Ultimate Strength
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)
Yield Strength
Investigation of correlation of carbide size and percentage with mechanical properties of high strength low alloy steels, 12:11637 (R;US)

Bioconversion
Biologic coal beneficiation: Literature review: Final report, 12:11001 (R;US)
Biological production of fuels from coal derived gases: Quarterly report, September 20, 1986 to December 20, 1986, 12:10722 (R;US)
Biodegradation
Biologic coal beneficiation: Literature review: Final report, 12:11001 (R;US)
Carbonization
Behaviour of coal during carbonization, 12:10729 (R;XE;In French)
Carbonization of conventional and partially briquetted charges of a Canadian steel company blend containing western Canadian coals, 12:10725 (R;CA)
Physical and chemical upgrading of coal and its by-products, 12:10728 (R;XE;In French)
Chemical Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
Practical concepts in the documentation of analytical methods, 12:10755 (BA;US)
Some thoughts on the sampling process and process sampling, 12:10754 (BA;US)
The determination of low level sulfur in coal and related materials by turbidimetry, 12:10756 (BA;US)
Chemical Composition
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, October-December 1986 (Foreign), 12:10771 (R;US)
Cleaning
Spectrophotometric determination of iron in process samples from the chemical cleaning of coal, 12:10734 (J;GB)
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 5, September 1, 1986-November 30, 1986, 12:10696 (R;US)
Combustion
A modeling study of pulverized coal combustion in CO_2/O_2 atmospheres, 12:10790 (R;US)
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)

Coal products and their utilization, 12:10693 (R;FI;In Finnish)
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10815 (RA;US)
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10816 (RA;US)
Entrained coal combustor promises low emissions of nitrogen oxides, 12:10832 (J;US)
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Group combustion of coal particles: Quarterly progress report, September 16, 1986 to December 15, 1986, 12:10826 (R;US)
Low emission combustor technology, 12:10798 (RA;US)
Operation and maintenance of DOE/PETC Combustion Test Facilities: Quarterly technical progress report for the period July 1, 1986 to September 30, 1986, 12:10825 (R;US)
Proceedings: 1986 joint symposium on dry SO_2 and simultaneous SO_2/NO/sub x/ control technologies: Volume 1, Sorbents, process research, and dispersion, 12:11187 (R;US)

Combustion Properties
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10816 (RA;US)

Consumption Rates
Modeling for economic and policy analysis of strategies to reduce coal sulfur emissions: Final report, July 1, 1985-February 28, 1986 (Regional analysis; USA), 12:10764 (R;US)

Demineralization
Spectrophotometric determination of iron in process samples from the chemical cleaning of coal, 12:10734 (J;GB)

Desulfurization
Biologic coal beneficiation: Literature review: Final report, 12:11001 (R;US)
Microbial removal of organic sulfur from coal: Quarterly project status report, September 15 to December 15, 1986, 12:10723 (R;US)
Modeling for economic and policy analysis of strategies to reduce coal sulfur emissions: Final report, July 1, 1985-February 28, 1986 (Regional analysis; USA), 12:10764 (R;US)
Spectrophotometric determination of iron in process samples from the chemical cleaning of coal, 12:10734 (J;GB)

Devolatilization
The distributed-energy chain model for rapid coal devolatilization kinetics. Part I: Formulation, 12:10733 (J;US)

Energy Consumption
Monthly energy review, September 1986, 12:11463 (R;US)

Energy Supplies
Monthly energy review, September 1986, 12:11463 (R;US)

Fluidized-Bed Combustion
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)
Erosion-corrosion mechanisms and rates in Fe - Cr steels, 12:10739 (BA;US)
Extractors manual for Fluidized-Bed Combustion Data Base System: Test Data Data Base, 12:10821 (R;US)
Extractors manual for Fluidized-Bed Combustion Data Base System: Major Plants Data Base, 12:10822 (R;US)
Identification of mutagenic constituents in coal-combustion flyash, 12:10838 (BA;US)

Heat Treatments
Combining the operation of a recuperatively heated coking oven with coal preheating, 12:10730 (R;XE;In German)

Imports
Monthly energy review, September 1986, 12:11463 (R;US)

Maritime Transport
Marine transport costs and coal trade, 12:10835 (R;GB)

Market
Remarks by the session chairman, 12:11167 (RA;US)
US Department of Energy, fossil energy research and development program, 12:10793 (RA;US)
Western coal: an industry in transition, 12:10834 (RA;US)

Materials Handling
Alternate gas turbine injection techniques, 12:10805 (RA;US)

Oxidation
A δP technique for the prediction and monitoring of coal oxidation, 12:10748 (R;CA)
Behaviour of coal during carbonization, 12:10729 (R;XE;In French)

Particle Size
Combustion research for advanced heat engine power system, 12:10809 (RA;US)

Pneumatic Transport
Negative pressure pneumatic conveying systems for CEGB power stations, 12:10785 (R;GB)

Prices
Integrated fuel and utility planning, 12:11166 (RA;US)
Premiums for low-sulfur coal, 12:11189 (RA;US)

Procurement
Remarks by the session chairman, 12:11167 (RA;US)

Production
Coal distribution, January-September 1986, 12:10833 (R;US)
Modeling for economic and policy analysis of strategies to reduce coal sulfur emissions: Final report, July 1, 1985-February 28, 1986 (Regional analysis; USA), 12:10764 (R;US)
Monthly energy review, September 1986, 12:11463 (R;US)

Pyrolysis
Physical and chemical upgrading of coal and its by-products, 12:10728 (R;XE;In French)
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, July 15-October 15, 1986, 12:10724 (R;US)

Quantitative Chemical Analysis
Chemistry Division annual progress report for period ending January 31, 1986, 12:11748 (R;US)

Rail Transport
Changing commercial practices in the coal industry: facts and fiction, 12:10787 (RA;US)
Coal transportation pricing, 12:10786 (RA;US)

Reactivity
Reactivity of inertinite and coke in recycling fly ash in FBC, 12:10828 (R;NL;In English and French)

Reserves
Premiums for low-sulfur coal, 12:11189 (RA;US)

Sampling
Some thoughts on the sampling process and process sampling, 12:10754 (BA;US)

Stockpiles
Impact roller tests on discard coal at Van Dyks Drift Colliery, 12:10700 (R;ZA)

Structural Chemical Analysis
Metal arene complexes in coal structure determination: Quarterly report for the period, September 1986-November 1986, 12:10745 (R;US)

Sulfur Content
Microbial removal of organic sulfur from coal: Quarterly project status report, September 15 to December 15, 1986, 12:10723 (R;US)
Premiums for low-sulfur coal, 12:11189 (RA;US)
The determination of low level sulfur in coal and related materials by turbidimetry, 12:10756 (BA;US)

Supply and Demand
Fuel market forecasts, 12:11160 (RA;US)
Western coal: an industry in transition, 12:10834 (RA;US)

Trade
Marine transport costs and coal trade, 12:10835 (R;GB)

Transport
Coal distribution, January-September 1986, 12:10833 (R;US)

COAL DEPOSITS
See also COAL SEAMS

Degassing
An evaluation of the effect of methane adsorption/desorption in well tests on coal beds: Final technical report, 12:10770 (R;US)

Information Systems
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, October-December 1986 (Foreign), 12:10771 (R;US)

Resource Assessment
Survey of tar sand deposits, heavy oil fields, and shallow light oil fields of the United States for underground coal gasification applications, 12:10769 (R;US)

COAL FINES
Additives
Improving the stability of coal slurries: Quarterly progress report for the period Sep. 15, 1986-Dec. 15, 1986, 12:10744 (R;US)
Combustion
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10815 (RA;US)
Flame monitoring: an aid to boiler cycling, 12:11136 (RA;US)
Metering
Coal flow splitting-control and measurement, 12:11498 (BA;US)
Sorptive Properties
Improving the stability of coal slurries: Quarterly progress report for the period Sep. 15, 1986-Dec. 15, 1986, 12:10744 (R;US)
Stability
Improving the stability of coal slurries: Quarterly progress report for the period Sep. 15, 1986-Dec. 15, 1986, 12:10744 (R;US)
COAL GAS
Chemical Reaction Yield
The Distributed-Energy Chain Model for rapid coal devolatilization kinetics. Part II: Transient weight loss correlations, 12:10732 (J;US)
The distributed-energy chain model for rapid coal devolatilization kinetics. Part I: Formulation, 12:10733 (J;US)
Desulfurization
A process for the removal of sulphur compounds from gas mixtures, 12:10882 (TG;GB)
Purification
High temperature coal gas chloride cleanup for molten carbonate fuel cell applications: Final report, 12:11503 (R;US)
COAL GASIFICATION
See also AGGLOMERATING ASH PROCESS
FLASH HYDROPYROLYSIS PROCESS
LURGI PROCESS
Physical and chemical upgrading of coal and its by-products, 12:10728 (R;XE;In French)
Catalysis
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)
Chemical Reactors
Pulsating gasification of low rank coals: Quarterly technical progress report for the period July 1, 1986-September 30, 1986, 12:10704 (R;US)
Coal Tar
Isolation and identification of mutagenic polycyclic aromatic hydrocarbons from a coal gasifier condensate, 12:10753 (J;US)
Computerized Simulation
Pulsating gasification of low rank coals: Quarterly technical progress report for the period July 1, 1986-September 30, 1986, 12:10704 (R;US)
Fluidized Beds
High-pressure operation of a fluidized-bed ash-agglomerating gasifier, 12:10738 (BA;US)
To extend the application of fluidized bed gasification of coal, 12:10726 (R;XE)
Information Systems
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Test Data Data Base, 12:10710 (R;US)
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Major Plants Data Base, 12:10709 (R;US)
Meetings
Proceeding of the sixth annual gasification contractors meeting, 12:10708 (R;US)
Pressure Effects
High-pressure operation of a fluidized-bed ash-agglomerating gasifier, 12:10738 (BA;US)
Research Programs
An overview of the US DOE Coal Gasification Program, 12:10737 (BA;US)
Proceeding of the sixth annual gasification contractors meeting, 12:10708 (R;US)
Pulsating gasification of low rank coals: Quarterly technical progress report for the period July 1, 1986-September 30, 1986, 12:10704 (R;US)
COAL GASIFICATION PLANTS
Chemical Reactors
Erosion-corrosion mechanisms and rates in Fe - Cr steels, 12:10739 (BA;US)
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report, 12:10707 (R;US)
Corrosion
Chloride induced corrosion in the generation and processing of gas produced from hard coal by the Lurgi high pressure gasification process, 12:10741 (TJ;GB)
Data Base Management
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Test Data Data Base, 12:10710 (R;US)
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Major Plants Data Base, 12:10709 (R;US)
Materials
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Materials Testing
Erosion-corrosion mechanisms and rates in Fe - Cr steels, 12:10739 (BA;US)
Mathematical Models
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report no. 5 for the period 1 August 1986 to 31 October 1986, 12:10827 (R;US)
On-Line Measurement Systems
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report, 12:10707 (R;US)
Systems Analysis
System analysis of simplified IGCC [Integrated Gasification Combined Cycle] plants, 12:10702 (R;US)
Waste Water
Biological nitrification and hydantoin removal in coal gasification wastewater, 12:10762 (BA;US)
COAL INDUSTRY
Competition
Western coal: an industry in transition, 12:10834 (RA;US)
Operation

COAL LIQUEFACTION PLANTS
Materials
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)

Valves
Alternative flow control nozzles/energy dissipation of highly erosive fluids: Final report, 12:10706 (R;US)

COAL LIQUIDS
API Gravity
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Boiling Points
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Chemical Composition
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Combustion Products
Control of criteria and non-criteria pollutants from coal/liquid mixture combustion, 12:11906 (R;US)
Distillation
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Hydrogenation
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Pour Point
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Quantitative Chemical Analysis
Separation and characterization of hydroxyl aromatic in complex fractions from nondistillable coal-derived liquids, 12:10752 (J;US)
Refining
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)
Viscosity
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies (From single-stage and two-stage liquefaction processes), 12:10701 (R;US)

COAL MINES
Information Systems
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, October-December 1986 (Foreign), 12:10771 (R;US)

COAL MINING
Noise Pollution
Development of the capacity to assess occupational noise overexposure in the mining industry. Open File report, 12:10837 (R;US)
Surface Mining
Western surface mine permitting and reclamation, 12:10766 (R;US)

COAL TAR
Chemical Reaction Yield
The Distributed-Energy Chain Model for rapid coal devolatilization kinetics. Part II: Transient weight loss correlations, 12:10732 (J;US)
The distributed-energy chain model for rapid coal devolatilization kinetics. Part I: Formulation, 12:10733 (J;US)
Mutagenesis
Isolation and identification of mutagenic polycyclic aromatic hydrocarbons from a coal gasifier condensate, 12:10753 (J;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Combustion Kinetics
Experiments on coal mineral matter deposition from combustion gases, 12:10813 (RA;US)
Mechanism of deposition in coal-fired gas turbine systems, 12:10812 (RA;US)
Combustors
Combustion of coal/water mixtures with thermal preconditioning, 12:10804 (RA;US)
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Gas turbine component screening program - fuel flexible combustor, 12:10799 (RA;US)
Gas turbine components screening, 12:10800 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)
Cyclone Combustors
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines, 12:10808 (RA;US)
Design
Gas Turbine Component Screening Program, 12:10801 (RA;US)
Desulfurization
Sorption of fuel-bound contaminants for coal and CWM-fired gas turbine systems, 12:10811 (RA;US)
Economics
Coal-fueled heat engines: an energy plan for a strong America, 12:10794 (RA;US)
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Efficiency
Combustion of coal/water mixtures with thermal preconditioning, 12:10804 (RA;US)
Environmental Impacts
Low emission combustor technology, 12:10798 (RA;US)
Fuel Feeding Systems
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)

Mathematical Models
Mechanism of deposition in coal-fired gas turbine systems, 12:10812 (RA;US)
Performance Testing
Alkali species characterization for coal-fueled gas turbines, 12:10803 (RA;US)
Coal water mixture combustion technology development, 12:10802 (RA;US)
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Gas Turbine Component Screening Program, 12:10801 (RA;US)
Research Programs
Advanced diesel research engine test facility for DOE Morgantown, 12:10818 (RA;US)
Technology Assessment
Coal-fueled heat engines: an energy plan for a strong America, 12:10794 (RA;US)
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Turbine Blades
Study of deposition control using transpiration, 12:10814 (RA;US)

COAL-FIRED MHD GENERATORS

PROTECTIVE COATINGS
REFLECTIVE COATINGS
Classification
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
Decontamination
Radioactive decontaminability in coating materials for nuclear installations, 12:11891 (R;BR;In Portuguese)
Design
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
Erosion
Characterization of coating processes and coatings for steam turbine blades, 12:11178 (J;US)
Fabrication
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
Reflectivity
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)

COBALT
Catalytic Effects
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Cobalt-catalyzed one-step assembly of B-ring aromatic steroids from acyclic precursors, 12:11845 (J;US)
Effects of dispersion and support on adsorption, catalytic and electronic properties of cobalt/alumina CO hydrogenation catalysts: [Technical progress report], 12:11812 (R;US)
New methods of alcohol production (carbons and hydrocarbon-based compounds) from synthesis gas, 12:11009 (R;FR;In French and English)
Chemical Reactions
Transition-metal cluster ions in the gas phase. Oxide chemistry of dimeric and trimeric clusters containing iron and cobalt, 12:11846 (J;US)
Deposition
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Oxidation
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
Structural Chemical Analysis
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)

COBALT 60
Adsorption
Chemical characterization, leach, and adsorption studies of solidified low-level wastes, 12:10979 (R;US)
Atom Transport
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Coprecipitation
Concentration and separation of selected radionuclides from water samples by coprecipitation, 12:11773 (RA;CS;In Czech)
Sorption
Engineered sorbent barriers for low-level waste disposal, 12:10951 (R;US)

COBALT ALLOYS
See also ALLOY-IN-100
COBALT BASE ALLOYS
Ion Implantation
High spatial resolution AEM observations of yttrium segregation in chromia scales growth on Co-45%Cr, 12:11613 (R;US)
Research Programs
B2 aluminides as alternative materials, 12:11665 (BA;US)
Scaling
High spatial resolution AEM observations of yttrium segregation in chromia scales growth on Co-45%Cr, 12:11613 (R;US)

COBALT BASE ALLOYS
Oxidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)
COBALT COMPLEXES
Crystal Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Ion Exchange Chromatography
Rotating annular chromatograph for continuous separations, 12:11801 (J;US)
Molecular Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Radiolysis
Kinetics of electron transfer from cobalt(II) porphyrins to various metalloporphyrin pi-radical cations in irradiated carbon tetrachloride solutions, 12:11888 (J;US)
COBALT COMPOUNDS
Reduction
Surface composition-reactivity relationships in heterogeneous catalysis: Progress report, 12:11810 (R;US)
COBALT IONS
Solvent Extraction
Interfacial chemistry in solvent extraction systems: Progress report for period April 1, 1986-March 31, 1987, 12:11751 (R;US)
COFFEE
See BEVERAGES
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
C Codes
COGEN3: Cogeneration analysis software Version 1.3: User's guide, 12:11575 (R;US)
Evaluation
The outlook for industrial cogeneration in Western Europe (gas turbines in the early nineties), 12:11558 (R;NL)
Forecasting
The outlook for industrial cogeneration in Western Europe (gas turbines in the early nineties), 12:11558 (R;NL)
COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS
COHERENT RADIATION
Radiation Detection
Coherent infrared detection, volume C. Final report, 12:11958 (R;AT)
COKE
Chemical Reaction Kinetics
Reactivity of inertinite and coke in recycling fly ash in FBC, 12:10828 (R;NL;In English and French)
Mechanical Properties
Optimization of the texture of carbon in coke, 12:10750 (R;XE)
Microstructure
Optimization of the texture of carbon in coke, 12:10750 (R;XE)
Production
Production of blast furnace coke in horizontal chamber ovens from charge blends of less than standard coking quality by a combination of pre-heating and stamping, 12:10727 (R;XE;In German)
Texture
Optimization of the texture of carbon in coke, 12:10750 (R;XE)
COKE OVENS
Design
Combining the operation of a recuperatively heated coking oven with coal preheating, 12:10730 (R;XE;In German)
Heat Recovery
Combining the operation of a recuperatively heated coking oven with coal preheating, 12:10730 (R;XE;In German)
Heaters
Combining the operation of a recuperatively heated coking oven with coal preheating, 12:10730 (R;XE;In German)
Operation
Combining the operation of a recuperatively heated coking oven with coal preheating, 12:10730 (R;XE;In German)
COKE-OVEN GAS

COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Coal Gasification
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Test Data Data Base, 12:10710 (R;US)
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Major Plants Data Base, 12:10709 (R;US)
System analysis of simplified IGCC [Integrated Gasification Combined Cycle] plants, 12:10702 (R;US)
Data Base Management
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Test Data Data Base, 12:10710 (R;US)
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Major Plants Data Base, 12:10709 (R;US)
Gas Turbines
Alternative combustion turbine designs and cleanup systems for pressurized fluidized-bed combustion (PFBC) power plants: Final report, 12:11152 (R;US)

Power Generation
Coproduction of carbon dioxide (CO_2) and electricity: Final report, 12:10853 (R;US)
Systems Analysis
System analysis of simplified IGCC [Integrated Gasification Combined Cycle] plants, 12:10702 (R;US)

COMBUSTION
See also FLUIDIZED-BED COMBUSTION
IN-SITU COMBUSTION
Additives
Proceedings: 1986 joint symposium on dry SO_2 and simultaneous SO_2/NO/sub x/ control technologies: Volume 1, Sorbents, process research, and dispersion, 12:11187 (R;US)
C Codes
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:11401 (R;US)
Coal
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)
Controlled Atmospheres
A modeling study of pulverized coal combustion in CO_2/O_2 atmospheres, 12:10790 (R;US)
Mathematical Models
A modeling study of pulverized coal combustion in CO_2/O_2 atmospheres, 12:10790 (R;US)
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report no. 5 for the period 1 August 1986 to 31 October 1986, 12:10827 (R;US)
Research Programs
Operation and maintenance of DOE/PETC Combustion Test Facilities: Quarterly technical progress report for the period July 1, 1986 to September 30, 1986, 12:10825 (R;US)
Test Facilities
Operation and maintenance of DOE/PETC Combustion Test Facilities: Quarterly technical progress report for the period July 1, 1986 to September 30, 1986, 12:10825 (R;US)

COMBUSTION CHAMBERS
Fluid Flow
SSME main combustion chamber and nozzle flowfield analysis. Final Report, 12:12013 (R;US)

COMBUSTION PRODUCTS
Filtration
Alternative combustion turbine designs and cleanup systems for pressurized fluidized-bed combustion (PFBC) power plants: Final report, 12:11152 (R;US)
Inhalation
Research and development on inhalation toxicologic evaluation of red phosphorus/butyl rubber combustion products, 12:12517 (R;US)
Toxicity
Research and development on inhalation toxicologic evaluation of red phosphorus/butyl rubber combustion products, 12:12517 (R;US)

COMBUSTORS
See also CYCLONE COMBUSTORS
FLUIDIZED-BED COMBUSTORS
PULSE COMBUSTORS
Design
Combustion of coal/water mixtures with thermal preconditioning, 12:10804 (RA;US)
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Gas turbine component screening program - fuel flexible combustor, 12:10799 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)
Flowmeters
Coal flow splitting-control and measurement, 12:11498 (BA;US)
Fuel Feeding Systems
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Fuel Injection Systems
Coal flow splitting-control and measurement, 12:11498 (BA;US)
Materials Handling Equipment
A 50 MW/sub t/ slag rejector development and design, 12:11490 (BA;US)
Performance
50 MW/sub t/ combustor performance characteristics, 12:11496 (BA;US)
Performance Testing
Combustion of coal/water mixtures with thermal preconditioning, 12:10804 (RA;US)
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Gas turbine component screening program - fuel flexible combustor, 12:10799 (RA;US)
Gas turbine components screening, 12:10800 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)

COMMERCE
See TRADE

COMMERCIAL BUILDINGS
Energy Consumption
Energy consumption for heating of buildings. Unit consumption for energy planning (Denmark), 12:11535 (R;DK;In Danish)
Load Analysis
Data collection and estimation for multiple-account and mixed-use facilities: A monograph from the COMSURV Project: Final report, 12:11473 (R;US)

COMMERCIAL SECTOR
Energy Conservation
1985 commercial and industrial survey: Customers of municipal and cooperative distributors of TVA [Tennessee Valley Authority] power, 12:11474 (R;US)
Energy Consumption
1985 commercial and industrial survey: Customers of municipal and cooperative distributors of TVA [Tennessee Valley Authority] power, 12:11474 (R;US)
Directions for future commercial survey research: A COMSURV monograph: Final report, 12:11475 (R;US)
Surveys
Directions for future commercial survey research: A COMSURV monograph: Final report, 12:11475 (R;US)

COMMUNICATIONS
Photovoltaic Power Supplies
Photovoltaic power system design for telecommunications, 12:11061 (R;GB)

COMPACT IGNITION TOKAMAK
A Tokamak proposed as a next-step after TFTR, i.e., for extensive ignited-core studies.
Design
The compact ignition tokamak: an overview, 12:12944 (R;US)

COMPACTING
Thermodynamics
Processing science to increase the reliability of ceramics. Final report, 1 July 1984-31 March 1986, 12:11685 (R;US)

COMPACTORS
Performance Testing
Impact roller tests on discard coal at Van Dyks Drift Colliery, 12:10700 (R;ZA)

COMPLEX TERRAIN
Air Flow
Study on features of flow field and atmospheric dispersion parameters in mountainous area by balanced balloons, 12:12236 (TG;US)
Air Pollution Monitors
Development and demonstration of ALARM (airborne lidar agent remote monitor). Final report, 12:12238 (R;US)

COMPOSITE MATERIALS
See also CERMETS
Carbon Fibers
Fiber-matrix interactions in carbon-fiber/cement matrix composites. Technical report, 12:11705 (R;US)
Compatibility
Effects of solvent exposures on poly(etheretherketone) (PEEK) and PEEK-fiberglass composites, 12:11719 (R;US)
Energy Losses
Nonlinear viscoelastic energy loss characterization of cord materials, 12:11925 (RA;US)

Epoxides
Evaluation of epoxy composites using photoacoustic Fourier transform infrared spectroscopy. Final report, 12:11704 (R;US)
Fatigue
Measurement of fatigue crack growth kinetics of Copper-Kapton laminates by dynamic mechanical thermal analysis, 12:11718 (R;US)
Matrix Materials
Evaluation of epoxy composites using photoacoustic Fourier transform infrared spectroscopy. Final report, 12:11704 (R;US)
Fiber-matrix interactions in carbon-fiber/cement matrix composites. Technical report, 12:11705 (R;US)
Mechanical Properties
Experiments and micromechanical models for creep-rupture in polymer matrix composites: Progress report for period June 15, 1984-June 14, 1987, 12:11708 (R;US)
Mechanical properties of laminated composites of Al 1100/Al 2024 in three aging states, 12:11622 (R;BR;In Portuguese)
Moisture
Moisture absorption in graphite/organic-matrix composites, 12:11732 (R;US)

COMPOSTING
Cost Benefit Analysis
Economic competitive power of alternative energy systems for farmsteads, 12:11570 (R;DK;In Danish)

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSOR BLADES
Evaluation
Inspection and evaluation of 33-size compressor blades, 12:11938 (R;US)
Inspection
Inspection and evaluation of 33-size compressor blades, 12:11938 (R;US)

COMPTON EFFECT
Differential Cross Sections
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Klein-Nishina Formula
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Total Cross Sections
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)

COMPTON SCATTERING
See COMPTON EFFECT

COMPUTER ARCHITECTURE
Visibility or disability: notes on attention. Technical report, July 1985-May 1986, 12:12980 (R;US)
Mathematical Models
Observability analysis and bad data processing for state estimation using Hachtel augmented matrix method, 12:12984 (R;US)

COMPUTER CALCULATIONS
Methods, not results.
Experiment Planning
Mathematics and Computer Science Division Five-Year Plan, 1986-1991, 12:12982 (R;US)

COMPUTER GRAPHICS
B Codes
BLOCKER: A block diagram editing utility, release notes, 12:13004 (R;US)
Display Devices
Graphic display development methodology: Volume 2, Appendixes: Final report, 12:11304 (R;US)
Text Editors
BLOCKER: A block diagram editing utility, release notes, 12:13004 (R;US)

COMPUTER LANGUAGES
See PROGRAMMING LANGUAGES

COMPUTER NETWORKS
Executive Codes
Interpretive model for "A Concurrency Method", 12:13000 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Radiation interlocks: The choice between conventional hard-wired logic and computer-based systems, 12:11939 (R;US)
C Codes
Control-C and ACSL for computer-aided control systems engineering, 12:11299 (RA;US)
CUTLASS DDC language, 12:11295 (RA;US)
Design
Applications of nonlinear controller design approach based on quasilinear system models, 12:11301 (RA;US)
Control system design and compensation with a signal-processing microprocessor, 12:11172 (RA;US)
Designing advanced control systems for distillation columns, 12:11936 (RA;US)
Nonlinear control system design based on quasalinear system models, 12:11302 (RA;US)
Rate-controlled technique for calcining and drying, 12:11699 (J;US)
Recent advances in linear multivariable control design, 12:11303 (RA;US)
Systematic nonlinear controller design approach based on quasilinear system models, 12:11300 (RA;US)
M Codes
Application of MVPACK to the design of multivariable control systems for a nuclear steam generator, 12:11297 (RA;US)
Performance
Rate-controlled technique for calcining and drying, 12:11699 (J;US)
Performance Testing
A transuranic aerosol measurement system: Preliminary results, 12:12275 (R;US)
Programming
Software summaries, 12:11298 (RA;US)
Reliability
Evaluation and validation of fault-tolerant digital control systems, 12:12006 (RA;US)
Sensitivity of a micro-processor based controls system to variation in fault-tolerant parameters, 12:12005 (RA;US)
Research Programs
Current and future issues in the design, analysis, and implementation of Distributed Computer-based Control Systems, 12:13006 (R;US)
Validation
Evaluation and validation of fault-tolerant digital control systems, 12:12006 (RA;US)

COMPUTERS
See also CRAY COMPUTERS
PROCESS COMPUTERS
Performance Testing
Los Alamos National Laboratory computer benchmarking, 1986, 12:12991 (R;US)

CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Surface Contamination
Determination of effects of atmospheric contamination on photovoltaic cells in concentrating systems, 12:11046 (R;US)

CONCRETES
See also REINFORCED CONCRETE
Fillers
Mixing ratio of fly ash concrete, 12:11556 (R;DK;In Danish)
Performance Testing
Preliminary assessment of the performance of concrete as a structural material for alternative low-level radioactive waste disposal technologies, 12:11721 (R;US)
Radioactive Waste Disposal
Posttest analysis of a laboratory-cast monolith of salt-saturated concrete. Final report, 12:10920 (R;US)
Ultimate Strength
The effects of target hardness on the structural design of concrete storage pads for spent-fuel casks: Final report, 12:10913 (R;US)

Uses
Evolution of the concrete structure, 12:11933 (RA;NO)
Platform designs. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:11932 (R;NO)

CONDENSERS (ELECTRIC)
See CAPACITORS

CONDENSERS (STEAM)
See STEAM CONDENSERS

CONFIGURATION INTERACTION
Not an interaction in the sense of INTERACTIONS.
Simulation
Vibrational and configurational contributions to the thermodynamics of metallic solutions, 12:12877 (J;GB)

CONNECTICUT YANKEE REACTOR
Computerized Control Systems
Northeast Utilities signal validation applications for Millstone - 3 and Connecticut Yankee plants, 12:11342 (RA;US)
Reactor Safety
Northeast Utilities signal validation applications for Millstone - 3 and Connecticut Yankee plants, 12:11342 (RA;US)

CONSERVATION (ENERGY)
See ENERGY CONSERVATION

CONSUMPTION RATES
For actions, ratios, percentages; not for consumption as a function of time.
Mathematical Models
Modeling for economic and policy analysis of strategies to reduce coal sulfur emissions: Final report, July 1, 1985-February 28, 1986, 12:10764 (R;US)

CONTACT RADIOTHERAPY

Chlorination
Chlorination/dechlorination studies relating to proposed cooling towers for K and C reactors, 12:12336 (R;US)
Heat Exchangers
Advanced dry-cooling demonstration: Summary: Final report, 12:11153 (R;US)

COPPER
Catalytic Effects
Model catalytic systems: Reactions of small molecules (C_4H_9OH, NH_3,CO,H_2) on transition metal surfaces, 12:11817 (R;US)
Crystal Structure
Neutron topography study of large single crystals by the local rocking curves method, 12:11631 (R;SU)
Degassing
Ion-stimulated gas desorption from stainless steel and copper surfaces under high vacuum, 12:11623 (RA;SU;In Russian)

Diffusion
Deep level effects in silicon and germanium after plasma hydrogenation, 12:11682 (J;US)
Dispersion Hardening
[Fundamentals of hardening and decohesion behavior in time-dependent cycle deformation]: Progress report, January 1, 1986-December 31, 1986, 12:11614 (R;US)
Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Electrochemical Corrosion
Laser Raman spectroscopic study of anodic corrosion films on silver and copper, 12:11859 (J;NL)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
Geologic Deposits
Copper mineralization geology of Mandacaru, State of Piaui, Brazil, 12:12283 (R;BR;In Portuguese)
Hardening
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Ion Exchange Chromatography
Rotating annular chromatograph for continuous separations, 12:11801 (J;US)
Mechanical Properties
Mechanical property measurements on ion-irradiated metals, 12:11638 (R;US)
Mineralization
Copper mineralization geology of Mandacaru, State of Piaui, Brazil, 12:12283 (R;BR;In Portuguese)
Neutron Diffraction
Neutron topography study of large single crystals by the local rocking curves method, 12:11631 (R;SU)
Pion Minus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A → pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
Proton Reactions
New limit on axion production in 800-GeV hadronic showers, 12:12640 (J;US)
Rotating Plasma
Steady state behavior of rotating plasmas in a vacuum-arc centrifuge, 12:12924 (R;BR)
Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Superlattices
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)

COPPER 63 TARGET
Neutron Reactions
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)

COPPER 65 TARGET
Neutron Reactions
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)

COPPER ALLOYS
See also COPPER BASE ALLOYS
Fabrication
Indigenous development of A-15 superconductors through in situ technique, 12:12103 (RA;US)
Mechanical Properties
Mechanical property measurements on ion-irradiated metals, 12:11638 (R;US)

COPPER BASE ALLOYS
Dispersion Hardening
[Fundamentals of hardening and decohesion behavior in time-dependent cycle deformation]: Progress report, January 1, 1986-December 31, 1986, 12:11614 (R;US)
Electrochemical Corrosion
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)
Physical Radiation Effects
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)

COPPER COMPLEXES
Biological Effects
[Impact of energy related pollutants on chromosome structure]: Progress report, 12:12344 (R;US)
DNA Adducts
[Impact of energy related pollutants on chromosome structure]: Progress report, 12:12344 (R;US)

COPPER COMPOUNDS
See also COPPER SULFIDES
Catalytic Effects
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)

COPPER SULFIDES
Magnetic Susceptibility
Magnetic susceptibility observation of removing oxygen from some chevrel compounds, 12:11739 (J;US)

COPPER VAPOR LASERS
See GAS LASERS

CORES (REACTOR)
See REACTOR CORES

CORN (MAIZE)
See MAIZE

CORN STOVER
See AGRICULTURAL WASTES
MAIZE

CORONA (SOLAR)
See SOLAR CORONA

CORROSION
Acoustic Measurements
Use of an acoustic borehole televiewer to investigate casing corrosion in geothermal wells, 12:11095 (BA;US)
Research Programs
Corrosion Research Center of the University of Minnesota: Progress report for the period January 1, 1986-December 31, 1986, 12:11611 (R;US)

CORROSION PRODUCTS
Mass Transfer
Corrosion product transport in a cycling fossil plant, 12:11133 (RA;US)

CORROSION RESISTANT ALLOYS
See also STAINLESS STEELS
Quantitative Chemical Analysis
The determination by x-ray fluorescence of platinum, palladium, ruthenium, iron, and chromium in special steels, 12:11780 (R;ZA)

COSMIC DUST
Spectral Reflectance
Structure of the extended emission in the infrared celestial background, 12:12562 (R;US)

COSMIC GAMMA RAYS
See COSMIC PHOTONS

COSMIC NEUTRONS
Prior to July, 1975 information was indexed to NEUTRONS.
Nuclear Reactions
Cosmic-ray-produced gamma rays in planetary surfaces, 12:12574 (BA;US)

COSMIC NOISE
See RADIO NOISE

COSMIC NUCLEI
Prior to July , 1975 information was indexed to NUCLEI.
Neutron Reactions
Cosmic-ray-produced gamma rays in planetary surfaces, 12:12574 (BA;US)

COSMIC PARTICLES
See COSMIC RADIATION

COSMIC PHOTONS
Prior to July, 1975 information was indexed to PHOTONS.

Neutron Reactions
Cosmic-ray-produced gamma rays in planetary surfaces, 12:12574 (BA;US)
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
See also COSMIC NEUTRONS
COSMIC NUCLEI
COSMIC PHOTONS
Neutron Reactions
Cosmic-ray-produced gamma rays in planetary surfaces, 12:12574 (BA;US)
Nuclear Reactions
Cosmic-ray-produced gamma rays in planetary surfaces, 12:12574 (BA;US)
COSMIC X RAYS
See COSMIC PHOTONS
COST ESTIMATION
A Codes
Automated Estimating System (AES): User's manual, 12:12990 (R;US)
COSTA RICA
Geochemical Surveys
Evaluation of stream sediments in areas of known mineralization, San Jose and Talamanca Quadrangles, Costa Rica: An orientation survey, 12:12561 (R;US)
COULOMB ATTRACTION
See COULOMB FIELD
COULOMB BARRIER
See COULOMB FIELD
COULOMB FIELD
Semiclassical Approximation
Inversion symmetry of hydrogenic expectation values, 12:12606 (J;GB)
COULOMB POTENTIAL
See COULOMB FIELD
COULOMB REPULSION
See COULOMB FIELD
COUNTERFLOW COOLING TOWERS
See COOLING TOWERS
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUNTY BUILDINGS
See PUBLIC BUILDINGS
COUPLINGS (MACHINE PARTS)
See MACHINE PARTS
COURT BUILDINGS
See PUBLIC BUILDINGS
CRACKS
Detection
Effects of crack geometry and material behavior on scattering by cracks for QNDE [quantitative non-destructive evaluation] applications: Technical progress report, March 1, 1986-February 28, 1987 (Quantitative non-destructive evaluation), 12:11998 (R;US)
CRATERS
Environmental Effects
Effects of surface collapse structures on infiltration and moisture redistribution, 12:12316 (R;US)
CRAY COMPUTERS
Algorithms
Block-oriented, local-memory-based linear-equation solution on the CRAY-2, 12:12978 (R;US)
CROPPING SYSTEMS
See CULTIVATION TECHNIQUES
CROPS
Cultivation Techniques
Proceedings of the Regional Workshop on Nuclear Techniques in Crop Production, 12:12477 (R;BR;In Portuguese)
Ethanol Fuels
Effect of different crop species and mixtures and storage methods on ethanol production. Final report, 19 July 1985-31 July 1986, 12:11010 (R;US)
Plant Breeding
Proceedings of the Regional Workshop on Nuclear Techniques in Crop Production, 12:12477 (R;BR;In Portuguese)
CROSSED BEAMS
See COLLIDING BEAMS
CROSSFLOW COOLING TOWERS
See COOLING TOWERS
CROWN ETHERS
See POLYETHYLENE GLYCOLS
CRUDE OIL
See PETROLEUM
CRYOPUMPS
Development of charcoal sorbents for helium cryopumping, 12:12957 (R;US)
Design
High-throughput continuous cryopump, 12:12946 (R;US)
CRYOSTATS
Design
SSC dipole long magnet model cryostat design and initial production experience, 12:12127 (RA;US)
Fabrication
SSC dipole long magnet model cryostat design and initial production experience, 12:12127 (RA;US)
CRYSTAL LATTICES
Stresses
Stress effects on Raman measurements of pulsed laser annealed silicon, 12:11674 (J;US)
Thermal Expansion
High temperature guinier x-ray diffractometry for thermal expansion measurements in the hexagonal form of cordierite (2MgO2Al3"O3#5SiO3"), 12:11702 (BA;US)
CRYSTALLINE ROCKS
See IGNEOUS ROCKS
CRYSTALLIZATION
Bench-Scale Experiments
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
Kinetics
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
Simulation
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
CRYSTALLOGRAPHY
Measuring Instruments
[He-atom surface scattering apparatus for studies of crystalline surface dynamics]: Progress report covering the period from May 1, 1986 to April 30, 1987, 12:11752 (R;US)
CRYSTALS
See also LIQUID CRYSTALS
Atom Collisions
[He-atom surface scattering apparatus for studies of crystalline surface dynamics]: Progress report covering the period from May 1, 1986 to April 30, 1987, 12:11752 (R;US)
Helicon Waves
Resonance interaction of helicon and spin oscillations in electron-impurity systems, 12:11717 (R;SU;In Russian)
Spin Waves
Resonance interaction of helicon and spin oscillations in electron-impurity systems, 12:11717 (R;SU;In Russian)
CULTIVATION TECHNIQUES
See also SHORT ROTATION CULTIVATION
Meetings
Proceedings of the Regional Workshop on Nuclear Techniques in Crop Production - Abstracts, 12:12441 (R;BR;In Portuguese)
CULTURAL OBJECTS
Objects of historical and/or artistic value.
X-Ray Fluorescence Analysis
X-ray fluorescence investigation of an Indian miniature from the beginning of the 17th century, 12:11768 (RA;CS;In Czech)
CURIUM IONS
Chemical Reaction Kinetics
Rate Constants for Reactions of Radiation-Produced Transients in Aqueous Solutions of Actinides, 12:11886 (J;US)

CURRENT LIMITERS
High-energy surge-arrester technology development. Part 2. Final technical report, 30 June 1982-28 February 1986 on Phase 1, 12:11194 (R;US)
CURRENT-DRIVE HEATING
Alfven Waves
Heating and current-drive with high phase velocity compressional Alfven waves, 12:12917 (R;US)
Electron Beam Injection
Theoretical study of the trapping of relativistic electron beams in tokamaks for current drive: Final scientific report, 1 September 1983-1 August 1984, 12:12911 (R;US)
Mathematical Models
Theory of current-drive in plasmas, 12:12931 (R;US)
CUTTING
Neodymium Lasers
Precision cutting and drilling with the Nd-YAG laser, 12:11965 (R;US)
CYANIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
See also HYDROCYANIC ACID
Chemical Reactions
Materials chemistry, 12:11723 (RA;US)
Critical Temperature
Thermodynamic properties of pure and dilute alkali cyanides: short range order effects, 12:11726 (R;BR)
Dielectric Properties
Thermodynamic properties of pure and dilute alkali cyanides: short range order effects, 12:11726 (R;BR)
Membrane Transport
Transport in Rhizobium and its significance to the legume symbiosis, 12:12345 (BA;US)
Photon-Molecule Collisions
Photoelectron branching ratios and asymmetry parameters of the two outermost molecular orbitals of methyl cyanide, 12:12605 (J;NL)
Quantitative Chemical Analysis
Potentiometric titration of mercury(II) with cetylpyridinium chloride, 12:11804 (J;AT)
Specific Heat
Specific heat measurements of the antiferroelectric phase transition in the mixed system KCN sub(x)Cl sub(1-x), 12:11729 (R;BR)
CYANOBACTERIA
Nitrogen Fixation
Aspects of nitrogen and carbon interchange in the Azolla-Anabaena symbiosis, 12:12401 (BA;US)
Electron transfer chains of cyanobacterial heterocysts, 12:12387 (BA;US)
Heterocyst development and nitrogen fixation by mastigocladus laminosus, 12:12384 (BA;US)
Organization of the genes for nitrogen fixation in cyanobacteria and photosynthetic bacteria, 12:12378 (BA;US)
Physiological studies on N_2-fixing cyanobacteria, 12:12388 (BA;US)
Photosensitivity
Photoinhibition of N_2 fixation, photosynthesis, and the collapse of blue-green algal blooms, 12:12391 (BA;US)
Photosynthesis
Photoinhibition of N_2 fixation, photosynthesis, and the collapse of blue-green algal blooms, 12:12391 (BA;US)
CYCLES (THERMODYNAMIC)
See THERMODYNAMIC CYCLES
CYCLOALKANES
NMR Spectra
Cross-polarization and magic angle sample spinning NMR of model organic compounds with extremely long ^1H T_1's, 12:11858 (J;US)
Spin-Lattice Relaxation
Cross-polarization and magic angle sample spinning NMR of model organic compounds with extremely long ^1H T_1's, 12:11858 (J;US)
CYCLOALKENES
See also CYCLOPENTADIENE
Crystal Structure
Single crystal neutron diffraction refinement of bullvalene at 110 K, 12:11824 (J;US)
CYCLONE COMBUSTORS
Performance
Entrained coal combustor promises low emissions of nitrogen oxides, 12:10832 (J;US)
Performance Testing
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines, 12:10808 (RA;US)
CYCLONE SEPARATORS
Configuration
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 5, September 1, 1986-November 30, 1986, 12:10696 (R;US)
Fluid Mechanics
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 5, September 1, 1986-November 30, 1986, 12:10696 (R;US)
Maintenance
Alternative combustion turbine designs and cleanup systems for pressurized fluidized-bed combustion (PFBC) power plants: Final report, 12:11152 (R;US)
CYCLOPENTADIENE
Electronic Structure
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding: Progress report for year ending February 28, 1987, 12:11814 (R;US)
CYCLOTRONS
See also ISOCHRONOUS CYCLOTRONS
MICROTRONS
Cyclotrons in 1986, 12:12049 (R;CA)
Industry
Charged particle accelerators for industry and medicine, 12:12025 (RA;SU;In Russian)
Status on the use of cyclotrons in industry and medicine, 12:12027 (RA;SU;In Russian)
Medicine
Status on the use of cyclotrons in industry and medicine, 12:12027 (RA;SU;In Russian)
Nuclear Medicine
Charged particle accelerators for industry and medicine, 12:12025 (RA;SU;In Russian)
Targets
A high-power target system for radioisotope production, 12:12166 (R;CA)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Fluid Mechanics
Pulsating flow and heat transfer over multiple cylinders, 12:11984 (RA;US)
Heat Transfer
Pulsating flow and heat transfer over multiple cylinders, 12:11984 (RA;US)
Stress Analysis
Damping force exerted by a viscous medium upon an oscillating cylinder, 12:12016 (R;NL;In Dutch)
Vortex Flow
Effect of sound on vortex shedding from cylinders, 12:11985 (RA;US)
CYTOCHROMES
Absorption Spectroscopy
Development of extended X-ray absorption fine structure spectroelectrochemistry and its application to structural studies of transition-metal ions in aqueous solution, 12:11794 (J;US)
Configuration Interaction
Association of ferredoxin-$NADP^+$ oxidoreductase with the chloroplast cytochrome b-f complex, 12:12409 (J;NL)
Voltametry
Development of extended X-ray absorption fine structure spectroelectrochemistry and its application to structural studies of transition-metal ions in aqueous solution, 12:11794 (J;US)

CZOCHRALSKI METHOD
Future application of Czochralski crystal pulling for silicon, 12:11031 (RA;US)
MCZ: striations in Cz silicon crystals grown under various axial magnetic field strengths, 12:11034 (RA;US)
Calculation Methods
Thermal-capillary model for Czochralski growth of semiconductor materials, 12:11039 (RA;US)
Comparative Evaluations
Potential productivity benefits of float-zone vs Czochralski crystal growth, 12:11032 (RA;US)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Particle Production
Charm quark production and fragmentation in e^+e^- annihilation at 29 GeV, 12:12642 (J;NL)
Observation of anti D-mesons in nC-interactions at 40-70 GeV/c, 12:12705 (R;SU)
D PLUS RESONANCES
See D MESONS
D ZERO RESONANCES
See D MESONS
D* PLUS RESONANCES
See D-2007 RESONANCES
D* ZERO RESONANCES

Particle Widths
D* width and the study of F and F*, 12:12617 (R;US)
DAIRY INDUSTRY
Energy Conservation
Energy integrated dairy farm system in New York: Final report, 12:11553 (R;US)
Energy Management
Energy integrated dairy farm system in New York: Final report, 12:11553 (R;US)
Waste Product Utilization
Energy integrated dairy farm system in New York: Final report, 12:11553 (R;US)
DAMS
Environmental Impacts
Wildlife protection, mitigation and enhancement planning for Grand Coulee Dam: Final report, 12:12315 (R;US)
DATA ACQUISITION SYSTEMS
T-15 Tokamak
Data control system for the T-15 installation, 12:12952 (R;SU;In Russian)
DATA ANALYSIS
Uncertainty propagation from raw data to final results, 12:12830 (BA;US)
S Codes
SUSIE reference manual, 12:12993 (R;US)
DATA BASE MANAGEMENT
Extractors manual for Fluidized-Bed Combustion Data Base System: Test Data Data Base (FBC; planning), 12:10821 (R;US)
Extractors manual for Fluidized-Bed Combustion Data Base System: Major Plants Data Base (FBC; planning), 12:10822 (R;US)
Implementation of a multi-lingual database system - multi-backend database system interface. Master's thesis, 12:12981 (R;US)
DATA DISPLAY DEVICES
See DISPLAY DEVICES
DATA DISPLAY SYSTEMS
See DISPLAY DEVICES
DATA PROCESSING
Manipulation of unit facts.
See also DISTRIBUTED DATA PROCESSING
Computer Networks
Advanced distributed processing with focus and PC/focus: Planning considerations and phased implementation, 12:12998 (R;US)
Errors
Evaluating the degree of deviation of multiparameter results in radioanalytical methods, 12:11771 (RA;CS;In Czech)
DATA TRANSMISSION SYSTEMS
Optical Fibers
Developmental single-mode fiber transmission system, 12:11943 (R;US)
DEBRIS (NUCLEAR)
See FISSION PRODUCTS
DECANE
Bubble Growth
Superheating and bubble growth within multicomponent fuel droplets, 12:11901 (RA;US)
Superheating
Superheating and bubble growth within multicomponent fuel droplets, 12:11901 (RA;US)
DECHLORINATION
Environmental Impacts
Chlorination/dechlorination studies relating to proposed cooling towers for K and C reactors, 12:12336 (R;US)
DECOMMISSIONING
Bibliographies
Nuclear facility decommissioning and site remedial actions: A selected bibliography: Volume 7, 12:10946 (R;US)
DEFECTS
Not for CRYSTAL DEFECTS.
Detection
Effects of crack geometry and material behavior on scattering by cracks for QNDE [quantitative non-destructive evaluation] applications: Technical progress report, March 1, 1986-February 28, 1987 (Quantitative non-destructive evaluation), 12:11998 (R;US)
DEFICIENCY (NUTRITIONAL)
See NUTRITIONAL DEFICIENCY
DEFORMED NUCLEI
Droplet Model
Giant resonance of electrical multipole from droplet model, 12:12764 (R;BR;In Portuguese)
E1-Transitions
Taking into account for Coriolis and quasiparticle-phonon interactions in calculations of rotational state energies and electric transition probabilities for odd deformed nuclei, 12:12766 (RA;SU;In Russian)
E2-Transitions
Taking into account for Coriolis and quasiparticle-phonon interactions in calculations of rotational state energies and electric transition probabilities for odd deformed nuclei, 12:12766 (RA;SU;In Russian)
Excited States
Technique for estimation of some high-excited state lifetime in odd deformed nuclei, 12:12767 (RA;SU;In Russian)
Giant Resonance
Giant angular resonance and structure of lowest-lying nuclear states, 12:12797 (RA;SU;In Russian)
Giant Resonance Model
Giant resonance of electrical multipole from droplet model, 12:12764 (R;BR;In Portuguese)
Lifetime
Technique for estimation of some high-excited state lifetime in odd deformed nuclei, 12:12767 (RA;SU;In Russian)
Rotational States
Taking into account for Coriolis and quasiparticle-phonon interactions in calculations of rotational state energies and electric transition probabilities for odd deformed nuclei, 12:12766 (RA;SU;In Russian)
DEHYDROGENASES
See OXIDOREDUCTASES
DELAYED NEUTRON PRECURSORS
Kolmogorov Equation
Approximate solution to the Kolmogorov equation for a fission chain-reacting system, 12:12843 (J;US)

Nuclear Reaction Kinetics
Approximate solution to the Kolmogorov equation for a fission chain-reacting system, 12:12843 (J;US)

DELAYED RADIATION INJURIES
See RADIATION INJURIES

DELTA-1236 RESONANCES
Hadronic Particle Decay
Upper limits for cumulative isobars, rho-meson production cross sections determined from the analysis of inclusive spectrum deformations, 12:12653 (RA;SU;In Russian)
Particle Production
Comparison of quasielastic scattering nu/sub μ/N $\rightarrow \mu^- P$ and Δ^{++} production reaction nu/sub μ/p $\rightarrow \mu^- \Delta^{++}$ in the BNL 7-foot deuterium bubble chamber, 12:12619 (R;US)
Upper limits for cumulative isobars, rho-meson production cross sections determined from the analysis of inclusive spectrum deformations, 12:12653 (RA;SU;In Russian)

DEMAND LIMITERS
See CURRENT LIMITERS

DENDRITIC WEB GROWTH METHOD
Automation
Large-area sheet task: Advanced dendritic web growth development: Final report, October 1980 to May 1985, 12:11044 (R;US)
Computerized Simulation
Large-area sheet task: Advanced dendritic web growth development: Final report, October 1980 to May 1985, 12:11044 (R;US)

DENITRIFICATION
Catalysts
Improved catalysts for coal liquefaction: Quarterly report number 9 for the period September 1, 1986 to November 30, 1986, 12:10721 (R;US)

DENMARK
Air Pollution
DK-EMEP bulletin 1978-1982. A five-year overview of rural air pollution in Denmark, 12:12249 (R;DK)
Energy Conservation
Employment effects of energy conservation investments in EC countries, 12:11451 (R;DE)
Industry
Technical-economic model for the industrial energy consumption in Denmark, 12:11430 (R;DK;In Danish)
Wave Power
Wave energy atlas (Denmark), 12:11100 (R;DK;In Danish)

DENSITY
For specific weight only.
Computerized Simulation
Modeling particle size and initial temperature effects on shock initiation of TATB-based explosives, 12:12218 (BA;NL)

DEOXYPENTOSE NUCLEIC ACID
See DNA

DEOXYRIBONUCLEIC ACID
See DNA

DEPLETED URANIUM
Gamma Spectra
Gamma-ray line intensities for depleted uranium, 12:10919 (BA;US)
Proton Reactions
318 and 800 MeV (p,xn) cross sections, 12:12742 (BA;US)

DEPLETION (ISOTOPIC)
See ISOTOPE SEPARATION

DEPOSITS
Mechanical Properties
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)
Removal
Water blowing of fireside deposits in coal-fired: Utility boilers: Final report, 12:11154 (R;US)
X-Ray Diffraction
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)

DEPOSITS (GEOLOGICAL)
See GEOLOGIC DEPOSITS

DESERTRON

DIESEL ENGINES
Computerized Simulation
Numerical analysis of coal-fired diesel engines, 12:10820 (RA;US)
Design
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Fuel Injection Systems
Effect of fuel properties on injection characteristics of four different diesel injection systems. Interim report, October 1983-December 1985, 12:10861 (R;US)
Fuel Substitution
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Coal-fueled diesel systems research, 12:10797 (RA;US)
Coal-fueled diesel: simulation study, 12:10819 (RA;US)
Numerical analysis of coal-fired diesel engines, 12:10820 (RA;US)
Mathematical Models
Coal-fueled diesel: simulation study, 12:10819 (RA;US)
Modifications
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Performance
Numerical tool for the correlative study of the combustion phase in subdivided chamber reciprocating engine, 12:11582 (R;FR;In French)
Performance Testing
Coal fueled diesel systems research, 12:10796 (RA;US)

Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10815 (RA;US)
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10816 (RA;US)
Combustion of coal/water slurry fuels in conventional diesel engines, 12:10817 (RA;US)
Producer Gas
Optimal adaptation of types of internal combustion engines with gas producers, 12:11588 (R;FR;In French)
Test Facilities
Advanced diesel research engine test facility for DOE Morgantown, 12:10818 (RA;US)

DIESEL FUELS
Antiknock Ratings
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies, 12:10701 (R;US)
API Gravity
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies, 12:10701 (R;US)
Autothermal Reformer Processes
Advanced diesel-oil fuel-processor development. Final report, 16 October 1984-21 May 1986, 12:11501 (R;US)
Boiling Points
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies, 12:10701 (R;US)
Chemical Composition
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies, 12:10701 (R;US)
Production
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 1, Project overview: Final report, 12:10993 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 4, Slurry phase synthesis of liquid hydrocarbon fuels from biomass pyrolysis gas using iron catalysts: Final report, 12:10996 (R;US)
Sprays
Effect of fuel properties on injection characteristics of four different diesel injection systems. Interim report, October 1983-December 1985, 12:10861 (R;US)
Viscosity
Effect of fuel properties on injection characteristics of four different diesel injection systems. Interim report, October 1983-December 1985, 12:10861 (R;US)
Yields
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies, 12:10701 (R;US)

Cathodes
Mechanism of the electrocatalytic reduction of oxygen in a tubular solid oxide electrolyte flow reactor, 12:11422 (J;US)
Electrocatalysts
Mechanism of the electrocatalytic reduction of oxygen in a tubular solid oxide electrolyte flow reactor, 12:11422 (J;US)
Electrodes
Experimental investigation of a porous carbon electrode for the removal of mercury from contaminated brine, 12:11423 (J;US)
Reduction
Mechanism of the electrocatalytic reduction of oxygen in a tubular solid oxide electrolyte flow reactor, 12:11422 (J;US)
Solid Electrolytes
Mechanism of the electrocatalytic reduction of oxygen in a tubular solid oxide electrolyte flow reactor, 12:11422 (J;US)

ELECTRODES
See also CATHODES
Dissolution
Anodic dissolution of iron phthalocyanine film electrodes, 12:11870 (J;US)
Electric Conductivity
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)

ELECTROJETS
Plasma Instability
Parallel current effects on auroral E-region plasma instabilities. Interim report, 12:12577 (R;US)

ELECTROLYTE TILES
See MATRIX MATERIALS

ELECTROLYTES
See also SOLID ELECTROLYTES
Ionic Conductivity
Defect structure, ionic conductivity, and diffusion in yttria-stabilized zirconia and related oxide electrolytes with fluorite structure, 12:11684 (R;US)

ELECTROMAGNETIC INTERACTIONS
See also ANNIHILATION
COMPTON EFFECT
Differential Cross Sections
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Mathematical Models
See-saw masses for quarks and leptons in an ambidextrous electroweak interaction model, 12:12650 (R;US)
Three-Body Problem
Calculation of electromagnetic observables in few-body systems, 12:12636 (R;US)
Total Cross Sections
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Two-Body Problem
Calculation of electromagnetic observables in few-body systems, 12:12636 (R;US)

ELECTROMAGNETIC LENSES
Permanent Magnets
Experience of using tipless permanent magnet quadrupole lenses on the I-2 linear accelerator, 12:12056 (RA;SU;In Russian)

ELECTROMAGNETIC PULSES
Computer Codes
Nonlinear conductivity induced by the passing of long intense em pulses (50 to 500 ns) near the earth's surface and in SF_6, 12:12582 (R;US)
Computerized Simulation
Nonlinear conductivity induced by the passing of long intense em pulses (50 to 500 ns) near the earth's surface and in SF_6, 12:12582 (R;US)
Current Limiters
High-energy surge-arrester technology development. Part 2. Final technical report, 30 June 1982-28 February 1986 on Phase 1, 12:11194 (R;US)
Measuring Instruments
The development of diagnostic fuses, 12:12228 (R;US)

Physical Radiation Effects
NCS EMP (National Communications System Electromagnetic Pulse) mitigation program: Aerial TI System test plan. Final report, 12:12226 (R;US)

ELECTRON ACCEPTOR
See ELECTRONS

ELECTRON BEAM FUSION ACCELERATOR
Operation
Vacuum pulse conditioning and risetime sharpening on a low nu/gamma multi-MEV electron beam accelerator, 12:12168 (BA;US)
Plasma Switches
Vacuum pulse conditioning and risetime sharpening on a low nu/gamma multi-MEV electron beam accelerator, 12:12168 (BA;US)
Thermionic Diodes
Vacuum pulse conditioning and risetime sharpening on a low nu/gamma multi-MEV electron beam accelerator, 12:12168 (BA;US)

ELECTRON BEAMS
Acceleration
Charged particle impact acceleration, 12:12066 (RA;SU;In Russian)
Laser acceleration of particles, 12:12041 (RA;SU;In Russian)
Beam Dynamics
Evolution of long pulses in a tapered wiggler free-electron laser, 12:11970 (BA;US)
Beam Emittance
Time-resolved studies of intense, relativistic electron beams with a subnanosecond C-hacekerenkov electro-optic shutter, 12:12599 (J;US)
Beam Injection
[Medium energy physics at Syracuse University: Technical progress report], 12:12697 (R;US)
Betatron Oscillations
Off-axis electron orbits in realistic helical wigglers for free-electron-laser applications, 12:11953 (R;US)
Chemical Radiation Effects
Studies of negative ion formation in fluroethers and fluorosulfides using low-energy (≦10 eV) electron beam and electron swarm techniques, 12:11850 (J;US)
Focusing
Method for calculation of relativistic electron high-current Brillouin beam sources, 12:12060 (RA;SU;In Russian)
Free Electron Lasers
Laser acceleration of particles, 12:12041 (RA;SU;In Russian)
Modulation
Evolution of long pulses in a tapered wiggler free-electron laser, 12:11970 (BA;US)
Polarized Beams
[Medium energy physics at Syracuse University: Technical progress report], 12:12697 (R;US)
Stability
Time-resolved studies of intense, relativistic electron beams with a subnanosecond C-hacekerenkov electro-optic shutter, 12:12599 (J;US)

ELECTRON COLLISIONS
See also ELECTRON-POSITRON COLLISIONS
X-Ray Spectra
Energy dependence of axial coherent bremsstrahlung at low accelerating voltages, 12:12584 (R;US)

ELECTRON CONFIGURATION (ATOMS)

ELECTRON MICROPROBE ANALYSIS
Reviews
Electron- and photon-stimulated desorption: probes of structure and bonding at surfaces, 12:11831 (J;US)

ELECTRON MICROSCOPES
Synchrotron Radiation Sources
Circular differential microscopy, 12:12215 (BA;US)

ELECTRON MICROSCOPY
Configuration
Effect of detector geometry on AEM-based x-ray microanalysis. II. Experimental, 12:12216 (BA;US)
Optimization
Resolution of source contributions to environmental samples: Final technical report, 12:12293 (R;US)
Performance
Effect of detector geometry on AEM-based x-ray microanalysis. II. Experimental, 12:12216 (BA;US)
Resolution
Effect of detector geometry on AEM-based x-ray microanalysis. II. Experimental, 12:12216 (BA;US)

ELECTRON MOBILITY
C Codes
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
P Codes
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)

ELECTRON PAIRS
Decay
Photoexcited charge pair escape and recombination: Final report for period July 1, 1983-July 31, 1986, 12:11871 (R;US)
Recombination
Photoexcited charge pair escape and recombination: Final report for period July 1, 1983-July 31, 1986, 12:11871 (R;US)

ELECTRON REACTIONS
Elastic Scattering
[Medium energy physics at Syracuse University: Technical progress report], 12:12697 (R;US)
Quasi-Elastic Scattering
Electrodisintegration of few body systems at SLAC and the Y scaling approach, 12:12699 (R;US)
Spallation
Excitation and de-excitation of magnetic resonances in the sup(12)C(e,e'X) reaction, 12:12805 (RA;SU;In Russian)
Partial channels of photo- and electrodisintegration of a sup(14)C nucleus, 12:12804 (RA;SU;In Russian)
Structure Functions
Structure functions and quark distributions in nuclens and nuclei, 12:12819 (R;SU;In Russian)

ELECTRON TRANSFER
Not for CHARGE EXCHANGE.
Kinetics
Kinetics of electron transfer from cobalt(II) porphyrins to various metalloporphyrin pi-radical cations in irradiated carbon tetrachloride solutions, 12:11888 (J;US)
Mathematical Models
Influence of orientational fluctuations on electron transfer in systems of donor-acceptor pairs, 12:11832 (J;US)
Reviews
Electron transfer reactions in condensed phases, 12:11857 (J;US)

ELECTRON-HOLE DROPLETS
Effective Mass
Effective interactions for self-energy. II. Application to electron and electron-hole liquids, 12:12871 (J;US)

Self-Energy
Effective interactions for self-energy. II. Application to electron and electron-hole liquids, 12:12871 (J;US)

ELECTRONIC DATA PROCESSING

Aging
Seismic fragility results during EPRI's aging/seismic research, 12:11395 (RA;US)

Seismic Effects
Impact on fragility level test by various types of multiaxis excitation, 12:11393 (RA;US)
Seismic fragility results during EPRI's aging/seismic research, 12:11395 (RA;US)

ELECTRONIC STRUCTURE
For electron configuration in atoms and molecules, and electron band structure in solids.

Fluctuations
Influence of orientational fluctuations on electron transfer in systems of donor-acceptor pairs, 12:11832 (J;US)

ELECTRONICS (QUANTUM)
See QUANTUM ELECTRONICS

ELECTRON-POSITRON COLLISIONS

Annihilation
Transverse momentum distribution of the three-jet event cross section in e^+e^--annihilation, 12:12652 (R;SU)

Differential Cross Sections
Transverse momentum distribution of the three-jet event cross section in e^+e^--annihilation, 12:12652 (R;SU)

ELECTRON-POSITRON INTERACTIONS

Annihilation
Neutrino counting at e^+e^- colliders and E_6 gauge theory, 12:12661 (J;US)

Particle Production
Charm quark production and fragmentation in e^+e^- annihilation at 29 GeV, 12:12642 (J;NL)

ELECTRON-PROTON INTERACTIONS

Electromagnetic Radiation
Detecting the radiation amplitude zero in $e^{+-}p \rightarrow e^{+-}p\gamma$, 12:12649 (R;US)

ELECTRON-RING ACCELERATORS

Electron Beam Injection
Investigation of electron selfcapture into a ring bunch in a collective accelerator adhezator, 12:12064 (RA;SU;In Russian)

Heavy Ions
KUTI-20 collective heavy-ion accelerator, 12:12038 (RA;SU;In Russian)
On a possibility of using electron rings for heavy ion acceleration, 12:12059 (RA;SU;In Russian)

ELECTRONS

Light Scattering
Coherent scattering of light by nuclear spins. Final report, 12:12751 (R;US)

Pair Production
Study of e^+e^- pairs in the mass range 11 to 25 GeV/c^2 at the CERN intersecting Storage Rings, 12:12641 (J;NL)

Photoemission
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)

Trapping
Deep level effects in silicon and germanium after plasma hydrogenation, 12:11682 (J;US)

ELECTROSTATIC ACCELERATORS
See also VAN DE GRAAFF ACCELERATORS

Collective Accelerators
High-current electron accelerators for investigations in the field of relativistic microwave electronics and collective acceleration methods, 12:12039 (RA;SU;In Russian)

Electron Beams
High-current nanosecond electron accelerators with high pulse repetition rate, 12:12033 (RA;SU;In Russian)
Modified regime of power ion beam production, 12:12043 (RA;SU;In Russian)
Radiation field shaping systems in accelerators for radiation engineering, 12:12159 (RA;SU;In Russian)
UCSB (University of California Santa Barbara) two-stage FEL (free-electron laser) experiment. Technical report No. 63, 1 October 1985-30 December 1986, 12:11951 (R;US)

Hydrogen 1 Minus Beams
Study on the H^- beam generation in reflectional systems, 12:12058 (RA;SU;In Russian)

Industry
Charged particle accelerators for industry and medicine, 12:12025 (RA;SU;In Russian)
Development and investigation of DIN-1 and LNT-2M accelerating neutron tubes for national economy, 12:12032 (RA;SU;In Russian)

Ion Beams
Modified regime of power ion beam production, 12:12043 (RA;SU;In Russian)

Neutron Sources
Development and investigation of DIN-1 and LNT-2M accelerating neutron tubes for national economy, 12:12032 (RA;SU;In Russian)

Nuclear Medicine
Charged particle accelerators for industry and medicine, 12:12025 (RA;SU;In Russian)

ELECTROSTATIC PRECIPITATORS
Review of the literature on pulse energization for electrostatic precipitators, 12:12017 (R;GB)

Design

Impingement
Gallatin Steam-Electric Plant: Paddlefish investigations: Progress report (Polyodon spathula), 12:11192 (R;US)
FISSION
Mathematical Models
Fission channel analysis for /sup 232/Th(n,f), 12:12750 (BA;US)
FISSION BARRIER
Liquid Drop Model
Observations on rotating finite-range fission barriers derived from barriers for nonrotating nuclei, 12:12826 (J;US)
FISSION NEUTRONS
Inelastic Scattering
Angular-distribution neutron-emission spectra of niobium following bombardment by fast neutrons, 12:12726 (BA;US)
FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Computerized Simulation
Analysis of transient fission-gas release and swelling in oxide fuel, 12:11309 (BA;US)
Grain-boundary sweeping and liquefaction-induced fission-product behavior in nuclear fuel under severe-core-damage accident conditions, 12:11414 (BA;US)
F Codes
Analysis of transient fission-gas release and swelling in oxide fuel, 12:11309 (BA;US)
Grain-boundary sweeping and liquefaction-induced fission-product behavior in nuclear fuel under severe-core-damage accident conditions, 12:11414 (BA;US)
FISSION PRODUCTS
Nuclear decay data: Some applications and needs, 12:12695 (BA;US)
Bubble Growth
Analysis of transient fission-gas release and swelling in oxide fuel, 12:11309 (BA;US)
Chemical Reaction Kinetics
Volatilization and reaction of fission products in flowing steam, 12:11308 (BA;US)
Diffusion
Combined grain-boundary and lattice diffusion in fine-grained ceramics, 12:11310 (BA;US)
Evaporation
Volatilization and reaction of fission products in flowing steam, 12:11308 (BA;US)
Grain Boundaries
Grain-boundary sweeping and liquefaction-induced fission-product behavior in nuclear fuel under severe-core-damage accident conditions, 12:11414 (BA;US)
Liquefaction
Grain-boundary sweeping and liquefaction-induced fission-product behavior in nuclear fuel under severe-core-damage accident conditions, 12:11414 (BA;US)
Radioecological Concentration
Study of the collection efficiency of gummed-film for fission products, 12:12274 (RA;US)
Swelling
Analysis of transient fission-gas release and swelling in oxide fuel, 12:11309 (BA;US)
FIXATION (CARBON DIOXIDE)
See CARBON DIOXIDE FIXATION
FLAME PROPAGATION
Measuring Methods
Behavior of turbulent premixed flames, 12:11904 (RA;US)
FLAMES
Combustion Properties
Effect of elevated pressure on the rate of soot production in laminar diffusion flames, 12:11910 (J;US)
Laser Spectroscopy
Two-dimensional fluorescence imaging of a flame-vortex interaction, 12:11909 (J;US)
Monitoring
Flame monitoring: an aid to boiler cycling, 12:11136 (RA;US)
Soot
Effect of elevated pressure on the rate of soot production in laminar diffusion flames, 12:11910 (J;US)
Stability
On the stability of the porous plug burner flame, 12:11911 (J;US)
Stability and stabilization of premixed flames, 12:11903 (RA;US)
Stabilization
Stability and stabilization of premixed flames, 12:11903 (RA;US)
Temperature Measurement
Effect of in-situ heat treatment on coal char reactivity. Final report, March 15, 1984-March 14, 1986. Part 2, 12:10823 (R;US)
Vortex Flow
Two-dimensional fluorescence imaging of a flame-vortex interaction, 12:11909 (J;US)
FLASH HYDROPYROLYSIS PROCESS
Chemical Reaction Kinetics
The flash hydropyrolysis and methanolysis of coal with hydrogen and methane, 12:10740 (BA;US)

FLAT PLATE COLLECTORS
Efficiency
Efficiency testing of solar collector prepared for the energy research program of the Danish Ministry of Energy. Product: Thermal Insulation Laboratory, 12:11081 (R;DK;In Danish)
FLAVONES
Isomers
Excited-state dynamics of the intramolecular proton transfer of 3-hydroxyflavone in the absence of external hydrogen-bonding interactions, 12:11851 (J;NL)

Testing
Coal flow splitting-control and measurement, 12:11498 (BA;US)
FLUE GAS
Chemical Composition
Alkali metal vapor removal from pressurized fluidized-bed combustor flue gas: Annual report, October 1984-September 1985, 12:10791 (R;US)
Condensers
Flue gas condensation when firing wood in single-family houses, 12:11536 (R;SE;In Swedish)
Denitrification
Flue-gas-cleanup research at Pittsburgh Energy Technology Center, 12:10763 (BA;US)
Desulfurization
Calcium sulfite and calcium sulfate crystallization: Volume 1, Effect of crystallizer type on gypsum size distribution: Final report, 12:11183 (R;US)
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
Demonstration plant for an energy-saving flue gas desulphurization process. Demonstration project. Final report, 12:11190 (R;DE;In German and English)
Design and operation of air pollution control equipment for cycling units, 12:11140 (RA;US)
Diversity of utility scrub-switch decision factors, 12:11188 (RA;US)
Economic evaluation of FGD systems: Volume 5, The NOXSO and SOXAL sodium-based processes and four additional calcium-based processes: Final report, 12:10761 (R;US)
Flue-gas-cleanup research at Pittsburgh Energy Technology Center, 12:10763 (BA;US)
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)
Flow Rate
Mass flow and temperature measurements in the flue of a woodburning appliance, 12:11517 (R;US)
Hot Gas Cleanup
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 12:10735 (BA;GB)
Purification
Direct sorbent injection for combined SO_2/NO/sub x/ removal: Quarterly technical progress report, July-September 1986, 12:10758 (R;US)
FLUID FLOW
See also INCOMPRESSIBLE FLOW
MULTIPHASE FLOW
TURBULENT FLOW
TWO-PHASE FLOW
Computerized Simulation
Particle-dynamics calculations of shear flow, 12:11996 (BA;NL)
Heat Transfer
Transport phenomena in porous media: single and two phase flow, 12:11983 (RA;US)
Mathematical Models
Harmonic analysis of a source identification problem, 12:13012 (J;US)
Navier-Stokes Equations
Nonlinear stability of asymptotic suction, 12:12615 (J;US)
Numerical Solution
A predictor-corrector method for calculation of incompressible fluid flow dynamics, 12:11992 (R;US)
S Codes
Mass balance computation in SAGUARO, 12:10952 (R;US)
Void Fraction
Transport phenomena in porous media: single and two phase flow, 12:11983 (RA;US)
FLUID MECHANICS
Mathematical Models
[Operation of MHD coal fired flow facility]: Quarterly technical progress report, January-March 1986, 12:11480 (R;US)
FLUIDIZED BED
See FLUIDIZED BEDS
FLUIDIZED BED BOILERS
Design
Extractors manual for Fluidized-Bed Combustion Data Base System: Test Data Data Base, 12:10821 (R;US)
Extractors manual for Fluidized-Bed Combustion Data Base System: Major Plants Data Base, 12:10822 (R;US)
FLUIDIZED BED REACTORS
ATWS
Thermal hydraulic and neutronic interaction in the rotating bed reactor, 12:11234 (D;US)
Microwave Heating
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 5, Microwave heating of fluidized bed reactors: Pyrolysis and calcination applications: Final report, 12:10997 (R;US)
Performance Testing
Experimental test of a biomass gasification prototype, 12:11000 (R;IT;IT)
FLUIDIZED BEDS
Heat Transfer
Fischer-Tropsch synthesis from a low H_2:CO gas in a dry fluidized-bed system. Volume 3. Heat transfer between a supernatant gas and a flowing shallow fluidized bed of solids. Final technical report, October 1, 1986, 12:10714 (R;US)
Fischer-Tropsch synthesis from a low HH_2:CO gas in a dry fluidized-bed system. Volume 1. Project summary. Final technical report, October 1, 1986 (Heat tray), 12:10713 (R;US)
Theoretical analysis of heat transfer due to particle impact, 12:12011 (R;US)
FLUIDIZED-BED COMBUSTION
Information
Extractors manual for Fluidized-Bed Combustion Data Base System: Test Data Data Base, 12:10821 (R;US)
Information Needs
Extractors manual for Fluidized-Bed Combustion Data Base System: Test Data Data Base, 12:10821 (R;US)

Extractors manual for Fluidized-Bed Combustion Data Base System: Major Plants Data Base, 12:10822 (R;US)

FLUIDIZED-BED COMBUSTORS
Design
Extractors manual for Fluidized-Bed Combustion Data Base System: Test Data Data Base, 12:10821 (R;US)
Extractors manual for Fluidized-Bed Combustion Data Base System: Major Plants Data Base, 12:10822 (R;US)
Flue Gas
Alkali metal vapor removal from pressurized fluidized-bed combustor flue gas: Annual report, October 1984-September 1985, 12:10791 (R;US)
Hot Gas Cleanup
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 12:10735 (BA;GB)
Materials
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Materials Testing
Erosion-corrosion mechanisms and rates in Fe - Cr steels, 12:10739 (BA;US)
Medium Pressure
Alternative combustion turbine designs and cleanup systems for pressurized fluidized-bed combustion (PFBC) power plants: Final report, 12:11152 (R;US)

FLUIDS
Not for BODY FLUIDS.
See also GASES
GEOTHERMAL FLUIDS
LIQUIDS
WORKING FLUIDS
Charge Transport
Contact propagation processes in heterogeneous media, 12:11974 (RA;US)
Convection
Shear-induced instabilities in a double-diffusive partially stratified fluid: experimental set-up, 12:11980 (RA;US)
Instability
Shear-induced instabilities in a double-diffusive partially stratified fluid: experimental set-up, 12:11980 (RA;US)
Stability
Nonlinear stability control and secondary bifurcation, 12:11927 (RA;US)
Stirring
Contact propagation processes in heterogeneous media, 12:11974 (RA;US)

FLUORENE
Mutagenesis
Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86, 12:12519 (R;US)
Structure-Activity Relationships
Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86, 12:12519 (R;US)

FLUORESCENCE
Pulse Rise Time
Excited-state dynamics of the intramolecular proton transfer of 3-hydroxyflavone in the absence of external hydrogen-bonding interactions, 12:11851 (J;NL)

FLUORESCENT CONCENTRATORS
See LUMINESCENT CONCENTRATORS

FLUORINATED ALIPHATIC HYDROCARBONS
Crystal Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_2)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
Electron Attachment
Studies of negative ion formation in fluroethers and fluorosulfides using low-energy (≦10 eV) electron beam and electron swarm techniques, 12:11850 (J;US)
Molecular Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_2)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)

FLUORINE
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
Metallurgical Effects
Deuteron magnetic resonance in some amorphous semiconductors, 12:11655 (BA;US)

FLUORINE FLUORIDES
See FLUORINE

FLUORS
See PHOSPHORS

FLUX (RADIATION)
See RADIATION FLUX

FLY ASH
Chemical Analysis
Identification of mutagenic constituents in coal-combustion flyash, 12:10838 (BA;US)
Dielectric Properties
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)
Electric Discharges
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)
Fluidized-Bed Combustion
Reactivity of inertinite and coke in recycling fly ash in FBC, 12:10828 (R;NL;In English and French)
Mutagen Screening
Identification of mutagenic constituents in coal-combustion flyash, 12:10838 (BA;US)
Pelletizing
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)
Polycyclic Aromatic Hydrocarbons
Identification of mutagenic constituents in coal-combustion flyash, 12:10838 (BA;US)
Recycling
Reactivity of inertinite and coke in recycling fly ash in FBC, 12:10828 (R;NL;In English and French)
Removal
Recent ANL data on MHD fouling, 12:11494 (BA;US)
Sorption of fuel-bound contaminants for coal-fired gas turbine systems: Final report, 12:11181 (R;US)
Uses
Mixing ratio of fly ash concrete, 12:11556 (R;DK;In Danish)
Waste Disposal
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)
Waste Management
Coal ash deposition, interaction with metal substrates and deposit build up: Second quarterly report, Sept. 24-Nov. 25, 1986, 12:10759 (R;US)

FOILS
Thinner than PLATES or SHEETS.
Production
Development of thin foils for use in generating neutral particle beams, 12:11608 (R;US)
Self-Shielding
Resonance self-shielding in fast neutron spectra, 12:12853 (D;US)

FOOD
See also BEVERAGES
MILK
Radurization
Irradiation of foodstuffs. Possibilities and applications in agriculture, 12:12440 (RA;BR)
Utilization of gamma radiation to preserve hydrated fresh macaroni, 12:12458 (RA;BR;In Portuguese)
Resource Assessment
Regional environmental simulation of African cattle herding societies, 12:11440 (J;US)

FOOD CHAINS
Contamination
Chernobyl reactor accident and its impact on Austrian agriculture, 12:12309 (R;AT;In German)
FOOD INDUSTRY
See also DAIRY INDUSTRY
Hazardous Materials
Health-hazard evaluation report HETA 85-329-1708, R. T. French Company, Springfield, Missouri, 12:12254 (R;US)
FOODSTUFFS

FORESTRY
Meteorology
Role of meteorology in Swedish conventional and short-rotation forestry, 12:11053 (R;SE;In Swedish)
FORESTS
Air Pollution
Effects of ozone and sulfur dioxide mixtures on forest vegetation of the southern Sierra Nevada. Final report, 12:12524 (R;US)
Ecosystems
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Radionuclide Kinetics
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Radionuclide Migration
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Species Diversity
Effects of bark beetle outbreaks on species composition, biomass, and nutrient distribution in a mixed deciduous forest, 12:12281 (R;US)
FORMALDEHYDE
Mutagenesis
Mechanisms of mutagenesis: Analysis through the use of alcohol dehydrogenase in Drosophila: Final report, 12:12520 (R;US)
FORMALIN
See FORMALDEHYDE
FORMALITH
See FORMALDEHYDE
FORMAMIDE
Solvent Properties
Solvent selectivity studies using isomers of polystyrene, 12:11860 (J;NL)
FORMATES
Molecular Structure
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Synthesis
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
FORMED COKE PROCESSES
Production of blast furnace coke in horizontal chamber ovens from charge blends of less than standard coking quality by a combination of pre-heating and stamping, 12:10727 (R;XE;In German)
FORMIC ALDEHYDE
See FORMALDEHYDE
FORMOL

FORMYL RADICALS
Hydrogenation
Studies of combustion kinetics and mechanisms: Progress report, June 1, 1984 to December 31, 1986, 12:11905 (R;US)
FOSSIL-FUEL POWER PLANTS
Air Heaters
Rotary air preheaters on power station boilers, 12:11175 (RA;GB)
Air Pollution Control
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
Direct sorbent injection for combined SO_2/NO/sub x/ removal: Quarterly technical progress report, July-September 1986, 12:10758 (R;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 1, 12:11185 (R;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)
Proceedings: 1986 joint symposium on dry SO_2 and simultaneous SO_2/NO/sub x/ control technologies: Volume 1, Sorbents, process research, and dispersion, 12:11187 (R;US)
Availability
Cycling of fossil plants: the key issue of the next 10 years, 12:11120 (RA;US)
Generic guidelines for the life extension of fossil fuel power plants: Final report, 12:11151 (R;US)
Boiler Fuels
Coal transportation pricing, 12:10786 (RA;US)
Premiums for low-sulfur coal, 12:11189 (RA;US)
Remarks by the session chairman, 12:11167 (RA;US)
Western coal: an industry in transition, 12:10834 (RA;US)
Boilers
Circumferential cracking of supercritical boiler water-wall tubes: Final report, 12:11155 (R;US)
Dissimilar-weld failure analysis and development program: Volume 3, Accelerated discriminatory tests: Final report, 12:11119 (R;US)
EPA (Environmental Protection Agency) LIMB (Limestone Injection Multistage Burner) development and demonstration program status report (April 1985). Report for February 1985-June 1986, 12:11191 (R;US)
Rotary air preheaters on power station boilers, 12:11175 (RA;GB)
Water blowing of fireside deposits in coal-fired: Utility boilers: Final report, 12:11154 (R;US)
Computerized Control Systems
Advanced control concepts for fossil central stations with applications to nuclear power plants, 12:11278 (RA;US)
CEGB philosophy and experience with fault-tolerant micro-computer application for power plant controls, 12:11266 (RA;US)
Digital control in Finnish power industry applications and some research and development activities, 12:11271 (RA;US)
Honeywell experience in distributed control system design and implementation in fossil and nuclear plants, 12:11281 (RA;US)
MATRIX/sub x/: control design and model building CAE capability for utility systems, 12:11296 (RA;US)
Multivariate digital control of an electric power generating plant, 12:11292 (RA;US)
Wide range digital control systems for integrated unit control of fossil fired plant at Kingsnorth Power Station, 12:11171 (RA;US)
Control Systems
Session C: controls, 12:11150 (RA;US)
Decommissioning
Exploitation, maintenance, and decommissioning of fossil fire units in France, 12:11132 (RA;US)
Diesel Engines
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Economics
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Environmental Effects
Diversity of utility scrub-switch decision factors, 12:11188 (RA;US)
Feedwater Heaters
High pressure feedwater heater experience on cycling units, 12:11144 (RA;US)
Session B-1: turbines and auxiliaries, 12:11149 (RA;US)
Flue Gas
Calcium sulfite and calcium sulfate crystallization: Volume 1, Effect of crystallizer type on gypsum size distribution: Final report, 12:11183 (R;US)
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)

Information Systems
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, October-December 1986 (Foreign), 12:10771 (R;US)
Maintenance
Coal-fired power plants in Japan, 12:11177 (J;US)
Exploitation, maintenance, and decommissioning of fossil fire units in France, 12:11132 (RA;US)
Materials
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Modifications
Adaptation of FECSA power plants to medium and peak load operation, 12:11130 (RA;US)
Cycling duty experience in the United States, 12:11122 (RA;US)
Cycling experience of Units 4, 5, and 6 at the Mystic Station of Boston Edison Company, 12:11129 (RA;US)
Cycling modifications to a base loaded unit, 12:11128 (RA;US)
IHI's experience in cycling operation of new and retrofit boilers, 12:11131 (RA;US)
Operating experience with cycling large coal fired electric utility generating units, 12:11127 (RA;US)
Strategies for fossil plant cycling, 12:11121 (RA;US)
Operation
Adaptation of FECSA power plants to medium and peak load operation, 12:11130 (RA;US)
Coal-fired power plants in Japan, 12:11177 (J;US)
Corrosion product transport in a cycling fossil plant, 12:11133 (RA;US)
Cycling duty experience in the United States, 12:11122 (RA;US)
Cycling experience of Units 4, 5, and 6 at the Mystic Station of Boston Edison Company, 12:11129 (RA;US)
Cycling modifications to a base loaded unit, 12:11128 (RA;US)
Cycling of fossil plants: the key issue of the next 10 years, 12:11120 (RA;US)
Dynamic modeling and performance evaluation of a fossil-fired power plant during full-load and reduced-load operations, 12:11124 (RA;US)
IHI's experience in cycling operation of new and retrofit boilers, 12:11131 (RA;US)
Operating experience with cycling large coal fired electric utility generating units, 12:11127 (RA;US)
Options for cyclic operation of a base-load design generating unit, 12:11126 (RA;US)
Plant cycling effects on environmental control equipment, 12:11125 (RA;US)
Startup advisor for fossil fired power plants, 12:11123 (RA;US)
Strategies for fossil plant cycling, 12:11121 (RA;US)
Performance
Dynamic modeling and performance evaluation of a fossil-fired power plant during full-load and reduced-load operations, 12:11124 (RA;US)
Plumes
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 1, 12:11185 (R;US)
Pollution Control Equipment
Design and operation of air pollution control equipment for cycling units, 12:11140 (RA;US)
Diversity of utility scrub-switch decision factors, 12:11188 (RA;US)
Plant cycling effects on environmental control equipment, 12:11125 (RA;US)
Service Life
Generic guidelines for the life extension of fossil fuel power plants: Final report, 12:11151 (R;US)
Stack Disposal
Experimental study of stack plume rise and dispersion at the power station, 12:11179 (R;US)
Method of estimating the long-term average concentration from the power plant's high stack, 12:11193 (TG;US)
Start-Up
Startup advisor for fossil fired power plants, 12:11123 (RA;US)
Steam Condensers
Advanced dry-cooling demonstration: Summary: Final report, 12:11153 (R;US)
Oxygen control in cycling power plants, 12:11145 (RA;US)
Steam Generators
Boiler stress and condition analyzer, 12:11139 (RA;US)
Corrosion product transport in a cycling fossil plant, 12:11133 (RA;US)
Cycling effects on boiler feed pumps, 12:11135 (RA;US)
Design considerations for the cycling conversion of a once-through steam generator, 12:11137 (RA;US)
Drum boiler components cycling effects and solutions, 12:11138 (RA;US)
Flame monitoring: an aid to boiler cycling, 12:11136 (RA;US)
Oxygen control in cycling power plants, 12:11145 (RA;US)
Session A-1: boiler and related auxiliaries, 12:11146 (RA;US)
Session A-2: boilers and related auxiliaries, 12:11147 (RA;US)
Steam Turbines
Cycling capability of supercritical turbines: a world wide assessment, 12:11134 (RA;US)
Evaluation of turbine bypass systems to facilitate cycling operation, 12:11143 (RA;US)
Modeling of alternative steam bypass systems for hot restarts, 12:11142 (RA;US)
Oxygen control in cycling power plants, 12:11145 (RA;US)
Session B-2: turbines and turbine auxiliaries working, 12:11148 (RA;US)
Session B-1: turbines and auxiliaries, 12:11149 (RA;US)
Update on partial-arc admission turbines for cycling applications, 12:11141 (RA;US)
Superheaters
Dissimilar-weld failure analysis and development program: Volume 3, Accelerated discriminatory tests: Final report, 12:11119 (R;US)
Modeling of alternative steam bypass systems for hot restarts, 12:11142 (RA;US)
Waste Heat Utilization
Rotary air preheaters on power station boilers, 12:11175 (RA;GB)
Waste Water
Bull Run Fossil Plant toxicity biomonitoring study, 12:12526 (R;US)
FOUNDATIONS
Heat Losses

FREE ELECTRON LASERS
Beam Optics
Evolution of long pulses in a tapered wiggler free-electron laser, 12:11970 (BA;US)
Dynamics
Multimode dynamics in a free-electron laser with energy shift. Technical report, 1 October 1985-30 December 1986, 12:11949 (R;US)
Efficiency
High-efficiency extraction of microwave radiation from a tapered-wiggler free-electron laser, 12:11969 (J;US)
Electron Beams
Effect of beam quality on the free-electron laser. Memorandum report, 12:11946 (R;US)
Off-axis electron orbits in realistic helical wigglers for free-electron-laser applications, 12:11953 (R;US)
Electron Guns
UCSB (University of California Santa Barbara) two-stage FEL (free-electron laser) experiment. Technical report No. 63, 1 October 1985-30 December 1986, 12:11951 (R;US)
Gain
Evolution of long pulses in a tapered wiggler free-electron laser, 12:11970 (BA;US)
High-efficiency extraction of microwave radiation from a tapered-wiggler free-electron laser, 12:11969 (J;US)
Mathematical Models
Evolution of long pulses in a tapered wiggler free-electron laser, 12:11970 (BA;US)
Microwave Radiation
High-efficiency extraction of microwave radiation from a tapered-wiggler free-electron laser, 12:11969 (J;US)
Mode Selection
Observation of single-mode operation in a free-electron laser. Technical report, 1 October 1985-30 December 1986, 12:11955 (R;US)
Optical Dispersion
Waveguide suppression of the free electron laser sideband instability, 12:11966 (R;US)
Power
High-efficiency extraction of microwave radiation from a tapered-wiggler free-electron laser, 12:11969 (J;US)
Superradiance
Three dimensional modelling and numerical analysis of superradiant harmonic emission in FEL (optical klystron), 12:11956 (R;US)
Wiggler Magnets
High-efficiency extraction of microwave radiation from a tapered-wiggler free-electron laser, 12:11969 (J;US)
FREE RADICALS
See RADICALS
FREONS
Heat Transfer
Free convection heat transfer in the critical region of the binary fluid mixtures, 12:11982 (RA;US)
FRESH WATER ECOSYSTEMS

F*RESONANCES
Particle Production
D* width and the study of F and F*, 12:12617 (R;US)
FROST
Frosts during the growing season. Frequency of occurrence and effects on current energy forestry, 12:11050 (R;SE;In Swedish)
FRUIT (SEEDS)
See SEEDS
FRUIT TREES
Plant Breeding
Cytogenetics and radiosensitivity for quince tree breeding purpose (Cydonia oblonga Mill.), 12:12501 (RA;BR;In Portuguese)
Radiosensitivity of quince seeds (Cydonia oblonga Mill.), 12:12500 (RA;BR;In Portuguese)
FUEL ADDITIVES
Synthesis
Hydrodeoxygenation of wood-derived liquids to produce hydrocarbon fluids, 12:11003 (J;US)
FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
Flow Rate
Automated mesh generation for fast reactor fuel assembly in calculating velocity and temperature fields by finite element method. Part 2, 12:11241 (R;CS;In Czech)
Heat Transfer
Determination of effective thermal conductivities for a full-scale mock-up of a 217-element breeder reactor fuel assembly subjected to normal shipping conditions, 12:10917 (R;US)
Mesh Generation
Automated mesh generation for fast reactor fuel assembly in calculating velocity and temperature fields by finite element method. Part 2, 12:11241 (R;CS;In Czech)
Storage Facilities
Facility for the storage of spent, heat-emitting and container-enclosed nuclear reactor fuel assemblies, 12:10918 (TG;US)
Temperature Distribution
Automated mesh generation for fast reactor fuel assembly in calculating velocity and temperature fields by finite element method. Part 2, 12:11241 (R;CS;In Czech)
Thermal Conductivity
Determination of effective thermal conductivities for a full-scale mock-up of a 217-element breeder reactor fuel assembly subjected to normal shipping conditions, 12:10917 (R;US)
FUEL BUNDLES
See FUEL ELEMENT CLUSTERS
FUEL CANS
Corrosion
Effect of impurity elements on corrosion behavior of Zircaloy in high temperature steam, 12:11214 (RA;XA)
Evaluation of and improvements in the performance of zircaloy cladding during and after its residence in water cooled nuclear power reactors, 12:11210 (RA;XA)
Experimental corrosion tests of Zr-Nb cladding material, 12:11228 (RA;XA)
External cladding corrosion of B & W-designed PWR fuel rods through burnups of 50 GWD/MTU, 12:11225 (RA;XA)
In cell measurements of crud and corrosion of BWR and HWR fuels at reef, JAERI, 12:11216 (RA;XA)
In-reactor corrosion data on fragema fuel, 12:11209 (RA;XA)
Influence of second phase particles on the nodular corrosion of Zircaloy-2, 12:11211 (RA;XA)
Influence of thermal-hydraulic plant design parameters and power history on PWR cladding corrosion, 12:11224 (RA;XA)
Justification of in-plant waterside corrosion of Zircaloy clad on the basis of thermal and hydraulic calculations, 12:11213 (RA;XA)
Long time out of pile corrosion of Zircaloy-4 in 350°C water, 12:11212 (RA;XA)
Problems of waterside corrosion of VVER clads, 12:11226 (RA;XA)
Waterside corrosion of Zircaloy-4 in nucleate boiling conditions, 12:11227 (RA;XA)
Fabrication
Influence of second phase particles on the nodular corrosion of Zircaloy-2, 12:11211 (RA;XA)
Failures
Transient failure of zircaloy cladding: State-of-the-art study and model development: Final report, 12:11373 (R;US)

Service Life
External cladding corrosion of B & W-designed PWR fuel rods through burnups of 50 GWD/MTU, 12:11225 (RA;XA)

FUEL CELL CATALYSTS
See ELECTROCATALYSTS

FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Advanced diesel-oil fuel-processor development. Final report, 16 October 1984-21 May 1986, 12:11501 (R;US)
Economics
Integration of fuel processors and molten carbonate fuel cells, 12:11514 (RA;DE)
Hybrid Systems
Integration of fuel processors and molten carbonate fuel cells, 12:11514 (RA;DE)

FUEL CELLS
See also ACID ELECTROLYTE FUEL CELLS
HYDROCARBON FUEL CELLS
Cogeneration
Cogeneration of electric power and nitric oxide in a solid-electrolyte fuel cell, 12:11502 (R;US)
Demonstration Programs
Solid state fuel cells with proton conducting electrolytes, 12:11513 (RA;DE)
Diesel Fuels
Advanced diesel-oil fuel-processor development. Final report, 16 October 1984-21 May 1986, 12:11501 (R;US)
Electrodes
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Marketing Research
Solid state fuel cells with proton conducting electrolytes, 12:11513 (RA;DE)
Meetings
Potential, state of the art and R and D requirements for fuel cells in the European Community. Proceedings, 12:11505 (R;DE)
Research Programs
Solid state fuel cells with proton conducting electrolytes, 12:11513 (RA;DE)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL CYCLE
Accidents
Aerosols generated by spills of viscous solutions and slurries, 12:10982 (R;US)
IAEA Safeguards
Optimal allocation of safeguards inspection resources for a nuclear fuel cycle, 12:10987 (J;US)

FUEL ELEMENT CLUSTERS
Dryout
Calculational method for coefficient of heat transfer to coolant flow in dryout and rewetting, 12:11374 (R;SU;In Russian)
Mechanical Vibrations
Effective properties of heterogeneous media with elastically fixed inclusions in vibrational effects, 12:11990 (R;SU;In Russian)
Rewetting
Calculational method for coefficient of heat transfer to coolant flow in dryout and rewetting, 12:11374 (R;SU;In Russian)

FUEL ELEMENTS
See also FUEL PINS
SPENT FUEL ELEMENTS
Fission Product Release
Fission-product release from UO/sub 2/ under LWR-accident conditions: Recent data compared with review values, 12:11413 (BA;US)

FUEL FEEDING SYSTEMS
Design
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)
Performance Testing
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)

FUEL GAS
See also LOW BTU GAS
NATURAL GAS
Calorific Value
Physical simulations of underground coal gasification in an eastern bituminous coal, 12:10705 (R;US)
Chemical Composition
Physical simulations of underground coal gasification in an eastern bituminous coal, 12:10705 (R;US)
Desulfurization
A process for the removal of sulphur compounds from gas mixtures, 12:10882 (TG;GB)
Hot Gas Cleanup
Evaluation of three high-temperature particle control devices for coal gasification, 12:10736 (BA;GB)

FUEL OILS
See also HEATING OILS
RESIDUAL FUELS
Combustion
Oil mixed with water. Investigation and combustion of cracked high viscous fuel oils, 12:10879 (R;SE;In Swedish)
Combustion Products
Oil mixed with water. Investigation and combustion of cracked high viscous fuel oils, 12:10879 (R;SE;In Swedish)
Fuel Substitution
Economic evaluation of microfine coal-water slurry: Final report, 12:10698 (R;US)
Supply and Demand
Fuel market forecasts, 12:11160 (RA;US)
Fuel oil trends and implications for the crude oil market, 12:11161 (RA;US)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Alpha Detection
Apparatus for inspecting fuel elements, 12:11264 (P;US)
In-Service Inspection
Apparatus for inspecting fuel elements, 12:11264 (P;US)
Radiation Monitors
Apparatus for inspecting fuel elements, 12:11264 (P;US)

FUEL SHEATHS
See FUEL CANS

FUEL SLURRIES
Chemical Composition
Coal water mixture combustion technology development, 12:10802 (RA;US)
Chemical Preparation
Economic evaluation of microfine coal-water slurry: Final report, 12:10698 (R;US)
Low-rank coal-water slurries for gasification: Phase 2, analytic studies: Final report, 12:10697 (R;US)
Combustion
Alkali species characterization for coal-fueled gas turbines, 12:10803 (RA;US)
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Combustion of coal/water mixtures with thermal preconditioning, 12:10804 (RA;US)
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10816 (RA;US)
Combustion of coal/water slurry fuels in conventional diesel engines, 12:10817 (RA;US)
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Gas turbine component screening program - fuel flexible combustor, 12:10799 (RA;US)
Gas turbine components screening, 12:10800 (RA;US)
Gas Turbine Component Screening Program, 12:10801 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)
Numerical analysis of coal-fired diesel engines, 12:10820 (RA;US)
Combustion Kinetics
Alkali species characterization for coal-fueled gas turbines, 12:10803 (RA;US)
Coal-fueled diesel: simulation study, 12:10819 (RA;US)
Combustion research for advanced heat engine power system, 12:10809 (RA;US)

Structure of fine-grained CWF flames: NO/sub x/ reduction by staged combustion, 12:10810 (RA;US)
Combustion Properties
Coal fueled diesel systems research, 12:10796 (RA;US)
Coal water mixture combustion technology development, 12:10802 (RA;US)
Combustion research for advanced heat engine power system, 12:10809 (RA;US)
Combustion characteristics of coal fuels in adiabatic diesel engines, 12:10816 (RA;US)
Gas turbine components screening, 12:10800 (RA;US)
Fuel Substitution
Coal fuel diesel engines for stationary power, 12:10795 (RA;US)
Coal fueled diesel systems research, 12:10796 (RA;US)
Coal-fueled diesel systems research, 12:10797 (RA;US)
Economic evaluation of microfine coal-water slurry: Final report, 12:10698 (R;US)
Heating
Combustion of coal/water mixtures with thermal preconditioning, 12:10804 (RA;US)
Materials Handling
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Performance Testing
Coal water mixture combustion technology development, 12:10802 (RA;US)
Physical Properties
Coal water mixture combustion technology development, 12:10802 (RA;US)
Production
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Research Programs
Coal-fueled diesel systems research, 12:10797 (RA;US)
Rheology
Alternate gas turbine injection techniques, 12:10805 (RA;US)
Low-rank coal-water slurries for gasification: Phase 2, analytic studies: Final report, 12:10697 (R;US)
Production of stable and pumpable coal-water slurry fuels, 12:10742 (R;CA)
Rheology of high concentration polymodal multiphase flows: Quarterly report, 12:10747 (R;US)
Stability
Production of stable and pumpable coal-water slurry fuels, 12:10742 (R;CA)
Staged Combustion
Structure of fine-grained CWF flames: NO/sub x/ reduction by staged combustion, 12:10810 (RA;US)

FUEL SUBSTITUTION
Economic Analysis
Coal-fueled diesel systems research, 12:10797 (RA;US)
Economics
Coal fueled diesel systems research, 12:10796 (RA;US)

G

GADOLINIUM
Activation Analysis
Samarium and gadolinium determination in ore samples using prompt gamma radiation produced in thermal neutron capture, 12:11758 (RA;CS;In Czech)

GADOLINIUM 154 TARGET
Neon 20 Reactions
Separation and identification of the short-lived isotopes of tungsten from products of the ^{154}Gd + ^{20}Ne reaction, 12:12732 (R;SU;In Russian)

GADOLINIUM OXIDES
Crystal Growth
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
Stimulated Emission
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)

GAGES (PRESSURE)
See PRESSURE GAGES

GALLIUM
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)

GALLIUM ARSENIDE SOLAR CELLS
High power solar array (HPSA) study. Final report (Shuttle launched mission), 12:11045 (R;NL)

GALLIUM ARSENIDES
Germanium Additions
Photoluminescence measurements of the 1,55 eV band of Ge doped Al sub(x)Ga sub(1-x)As, 12:11728 (R;BR)
Microstructure
Some in situ observations of GaAs oxidation, 12:11738 (J;US)
Optical Properties
Epitaxial semiconductor optical interference filters, 12:11731 (R;US)
Optical properties and interfaces of GaAs/GaAlAs quantic sinks. Ph.D. Thesis, 12:11957 (R;FR;In French)
Oxidation
Some in situ observations of GaAs oxidation, 12:11738 (J;US)

Photoluminescence
Photoluminescence measurements of the 1,55 eV band of Ge doped Al sub(x)Ga sub(1-x)As, 12:11728 (R;BR)
Schottky Barrier Diodes
Prompt charge collection in gallium arsenide diodes struck by energetic heavy ions. Final report, May 1983-December 1985, 12:11600 (R;US)
GALLIUM OXIDES
Crystal Growth
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
Stimulated Emission
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
GALLIUM PHOSPHIDES
Optical Properties
Epitaxial semiconductor optical interference filters, 12:11731 (R;US)
GAMMA DETECTION
Liquid Scintillation Detectors
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
GAMMA RADIATION
Energy Spectra
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
Neutron Transport Theory
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS
GAMMA SPECTROMETERS
See also MOESSBAUER SPECTROMETERS
Calibration
U-235 enrichment determination via gamma spectroscopy-improved calibration and "unknown" sample assay, 12:10909 (J;US)
Liquid Scintillation Detectors
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
GAMMA SPECTROSCOPY
Calibration
Results of an intercomparison of gamma spectrometers in Austria; volume source ^{134}Cs and ^{137}Cs A-1986, 12:12206 (R;AT;In German)
Calibration Standards
The use of calibration standards and the correction for sample self-attenuation in gamma-ray nondestructive assay, 12:10984 (R;US)
Corrections
The use of calibration standards and the correction for sample self-attenuation in gamma-ray nondestructive assay, 12:10984 (R;US)
Interlaboratory Comparisons
Results of an intercomparison of gamma spectrometers in Austria; volume source ^{134}Cs and ^{137}Cs A-1986, 12:12206 (R;AT;In German)
GAMMA TRANSPORT THEORY
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)

GLOW CURVE
Data Analysis
Experiences of glow curve analysis of LiF detectors, 12:12856 (RA;HU)
GLYCINE HISPIDA
Carbon Dioxide Fixation
Characteristics of CO_2 fixation and productivity of corn and soybeans, 12:12397 (BA;US)
Nitrogen Fixation
In vivo energetics of symbiotic nitrogen fixation, 12:12402 (BA;US)
Uninfected cells in ureide- and amide-exporting legume root nodules, 12:12375 (BA;US)
Photosynthesis
Regulation of photosynthetic sucrose formation in leaves, 12:12399 (BA;US)
Plant Breeding
Induced mutation in soybean (Glycine max L.) breeding, 12:12486 (RA;BR;In Portuguese)
Induced mutation in soybean (Glycine max L.) breeding, 12:12502 (RA;BR;In Portuguese)
Productivity
Characteristics of CO_2 fixation and productivity of corn and soybeans, 12:12397 (BA;US)
Yields of field-grown soybeans exposed to simulated acidic rainfalls, 12:12292 (R;US)
Radiation Induced Mutants
Induced mutation in soybean (Glycine max L.) breeding, 12:12486 (RA;BR;In Portuguese)
Induced mutation in soybean (Glycine max L.) breeding, 12:12502 (RA;BR;In Portuguese)
GLYCOLIC ACID
Metabolism
Oxidative photosynthetic carbon cycle and peroxisomal glycolate metabolism, 12:12392 (BA;US)
GLYCOLS
See also POLYETHYLENE GLYCOLS
Biodegradation
Biological nitrification and hydantoin removal in coal gasification wastewater, 12:10762 (BA;US)
GOBAR GAS
See METHANE
GOLD
Activation Analysis
NAA determination of small amounts of gold in platinum, 12:11765 (RA;CS;In Czech)
Auger Electron Spectroscopy
Fluorescence detection of surface exafs, 12:11803 (J;NL)
Crystal Structure
Importance of surface structure in electrochemistry: the well-defined Au (111) single crystal electrode surface, 12:11669 (J;NL)
Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Fluorescence Spectroscopy
Fluorescence detection of surface exafs, 12:11803 (J;NL)
Hardening
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Heavy Ion Reactions
Dilepton emission and the QCD phase transition in ultrarelativistic nuclear collisions, 12:12755 (RA;US)
Molecule Collisions
Quantum-resolved gas-surface scattering: NH_3 from Au (111), 12:12594 (R;US)
Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)

Superlattices
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Surface Properties
Importance of surface structure in electrochemistry: the well-defined Au (111) single crystal electrode surface, 12:11669 (J;NL)
GOLD 196
K Capture
Determination of relative probability of K capture on the 688.7 keV level in sup(196)Pt, 12:12740 (RA;SU;In Russian)
GOLD 197 TARGET
Alpha Reactions
Analysis of experimental data on light nucleus production in relativistic αA-interactions within the generalized coalescence model, 12:12820 (R;SU;In Russian)
Neon 20 Reactions
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)
GOLD ORES
Leaching
Geothermal enhancement of mineral processing in Nevada: Final report, April 25, 1985-June 30, 1986, 12:11096 (R;US)
GOLDHABER-TELLER MODEL
See GIANT RESONANCE MODEL
GRAIN ALCOHOL
See ETHANOL
GRAINS (CEREAL)
See SEEDS
GRAMINEAE
See GRASS
GRAND UNIFIED THEORY
Two-loop finite supersymmetric SU_5 theory: towards a theory of fermion masses, 12:12683 (J;NL)
GRANULAR BED FILTERS
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 12:10735 (BA;GB)
GRAPES
Radiation Induced Mutants
Induction of mutation in vine aiming resistance to mildew. Plasmopara viticola (Berk and Curtiss) Berl. et De Toni, 12:12495 (RA;BR;In Portuguese)
GRAPHITE
Adsorption
Lennard-Jones triangular lattice gas in the Kikuchi approximation, 12:12592 (R;BR)
Clathrates
Systematic study of the high temperature transitions in first-stage alkali-graphites at saturation, 12:11716 (R;US)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GRASERS
See GASERS
GRASS
See also SUGAR CANE
Nitrogen Fixation
Symbiotic nitrogen fixation in varzeas of the Amazon River. A possible source of N-NO_3 for the river, 12:12368 (RA;BR;In Portuguese)
Photosynthesis
Photosynthesis in allopolyploid Festuca, 12:12400 (BA;US)
Radiation Monitoring
Measurement of Chernobyl fallout activity in grass and soil at Chester, New Jersey, 12:12303 (RA;US)
GRAVITATION
Gauge Invariance
Relativistic theory of gravity, 12:12888 (R;SU)
Gravitons
Relativistic gravitation theory and graviton rest mass, 12:12887 (R;SU;In Russian)
Relativistic Range
Relativistic theory of gravity, 12:12888 (R;SU)
GRAVITONS
Rest Mass
Relativistic gravitation theory and graviton rest mass, 12:12887 (R;SU;In Russian)
GREAT BRITAIN
See UNITED KINGDOM
GREENHOUSE EFFECT
Biological Effects
4.1. Response of the North American corn belt to climatic warming, 12:12291 (J;NL)
Computerized Simulation
4.1. Response of the North American corn belt to climatic warming, 12:12291 (J;NL)
Environmental Effects
4.1. Response of the North American corn belt to climatic warming, 12:12291 (J;NL)
GREENLAND
Hydroelectric Power Plants
Preliminary investigation of hydroelectric power 1984-1985-1986 Paakitsup Akuliarusersua Ilulissat/Jakobshavn. Text, 12:11018 (R;DK;In Danish)
Preliminary investigation of hydroelectric power 1984-1985-1986 Paakitsup Akuliarusersua Ilulissat/Jakobshavn. Appendix, 12:11019 (R;DK;In Danish)
GROUND DISPOSAL
Remedial Action
Mobile treatment technologies for superfund wastes, 12:12294 (R;US)
Rock Mechanics
Thermomechanical analysis of some proposed schemes for radioactive waste disposal. Research report, 12:10950 (R;US)
GROUND SOURCE HEAT PUMPS
Field Tests
Heat pump experiments using crawl spaces as ground-to-air heat exchangers: Final report, 12:11519 (R;US)
Heat Exchangers
Horizontal ground-coil heat exchanger theoretical and experimental analysis, 12:11529 (R;US)
Mathematical Models
Horizontal ground-coil heat exchanger theoretical and experimental analysis, 12:11529 (R;US)
Performance Testing
Horizontal ground-coil heat exchanger theoretical and experimental analysis, 12:11529 (R;US)
GROUND STATES
Isospin
Isospin mixing in mean-heavy nuclei, 12:12789 (RA;SU;In Russian)
GROUND SUBSIDENCE
Computer Codes
Computer analysis of the effects of mine subsidence on pipelines, 12:10765 (R;CA)
Computerized Simulation
Computer analysis of the effects of mine subsidence on pipelines, 12:10765 (R;CA)
Forecasting
'Sub #4' user guide: computer calculation of longwall subsidence profiles using the NCB Subsidence Engineers Handbook, 12:10777 (R;CA)
S Codes
'Sub #4' user guide: computer calculation of longwall subsidence profiles using the NCB Subsidence Engineers Handbook, 12:10777 (R;CA)
GROUND WATER
Contamination
Ground water investigation at Lawrence Livermore National Laboratory, Livermore, California: Volume two, Appendixes: Annual report for fiscal year 1985, 12:12329 (R;US)
Ground water investigation at Lawrence Livermore National Laboratory, Livermore, California: Volume one, Text: Annual report for fiscal year 1985, 12:12328 (R;US)
Testing and sampling of existing wells in the vicinity of Lawrence Livermore National Laboratory and Sandia National Laboratories, Livermore, California: Final report, 12:12330 (R;US)

Flow Models
Regional ground-water flow modeling for the Paradox Basin, Utah: Second status report, 12:10923 (R;US)
Fluid Flow
Mass balance computation in SAGUARO, 12:10952 (R;US)
Nuclear waste chemistry, 12:12559 (RA;US)
Geochemical Surveys
Ground Water movement in crystalline rock aquifers (State of Ceara, Brazil), 12:12284 (R;BR;In Portuguese)
Hydrology
Ground Water movement in crystalline rock aquifers (State of Ceara, Brazil), 12:12284 (R;BR;In Portuguese)
Monitoring
Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805, 12:12536 (R;US)
Quantitative Chemical Analysis
Noble gas detection using resonance ionization spectroscopy and a quadrupole mass spectrometer, 12:11808 (J;US)
Radionuclide Migration
An analysis of groundwater contamination from the operation of a 6-GeV continuous electron beam accelerator, 12:12332 (R;US)
Calculations for INTRACOIN, level 2: Fractured media, case C: Hydrodynamic dispersion-diffusion and stagnant water model, 12:10969 (RA;SE)
INTRACOIN, level 2: Case 2A: A one-dimensional approach, 12:10965 (RA;SE)

GROUND-WATER RESERVES
See AQUIFERS

GROUTING
Autoradiography
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Chemical Composition
Initial formulation results for in situ grouting of a waste trench at ORNL Site No. 6, 12:10949 (R;US)
Optical Microscopy
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Scanning Electron Microscopy
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Technology Assessment
Initial formulation results for in situ grouting of a waste trench at ORNL Site No. 6, 12:10949 (R;US)
X-Ray Diffraction
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)

GULF COAST
Salt Deposits
Uniaxial and triaxial mechanical experiments on rock salt samples from three gulf coast domes, 12:12560 (J;US)

GYPSUM
Particle Size
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
Pelletizing
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)
Waste Disposal
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)

GYROCONS
ECR Heating
Problems of power, efficiency and frequency increasing for gyrotrons used in plasma investigations, 12:12953 (RA;SU;In Russian)

GYROTRONS
See MICROWAVE AMPLIFIERS

H

H CODES
HSTART: An improved initial step size routine for ODE codes, 12:13002 (R;US)
The HARMFLO code: Version 4.0: User's guide, 12:11117 (R;US)

H2 REGIONS
Production and evolution of ionized hydrogen regions in process of massive star formation, 12:12568 (R;SU;In Russian)
Far Infrared Radiation
Structure of the extended emission in the infrared celestial background, 12:12562 (R;US)

HADDAM NECK REACTOR
See CONNECTICUT YANKEE REACTOR

HADRON-HADRON INTERACTIONS
Cross Sections
Dipole Pomeron in Reggeon theory with $\alpha(0) > 1$, 12:12655 (R;SU)
Dual Resonance Model
High-energy hadron scattering in a dipole Pomeron model, 12:12654 (R;SU;In Russian)
Total Cross Sections
Hadronic total cross sections: which Pomeron do they prefer, 12:12656 (R;SU)

HADRONIC ATOMS
Energy Levels
Antiprotonic atomic energy levels via the (p vector, p) reaction, 12:12604 (J;NL)
L-S Coupling
Effect of nuclear spin-orbit interaction in light Σ-atoms, 12:12806 (R;SU)
Sigma Minus
Effect of nuclear spin-orbit interaction in light Σ-atoms, 12:12806 (R;SU)

HADRONS
See also BARYONS
Multiple Production
Relativistic-invariant statistical theory and its application to multiple processes, 12:12634 (R;SU)
Particle Production
Dipole Pomeron in Reggeon theory with $\alpha(0) > 1$, 12:12655 (R;SU)

HAFNIUM
Thermionic Emission
Study of the enhanced thermionic emission of molybdenum, hafnium and zirconium due to dispenser-cathode exposure. Final report, September 1982-September 1985, 12:11598 (R;US)

HAFNIUM 180
Excited States
Sup(180)Hf excited states, 12:12731 (RA;SU;In Russian)
Internal Conversion
Internal conversion electrons from the sup(179)Hf(n,γ) reaction, 12:12730 (RA;SU;In Russian)
Isomeric Transitions
Search for the beta decay of /sup 180/Lu to /sup 180/Hf/sup m/, 12:12734 (J;US)

HAFNIUM 180 TARGET
Neutron Reactions
Isomeric levels in /sup 180/Lu and the nucleosynthesis of /sup 180/Ta/sup m/, 12:12735 (J;US)
Search for the beta decay of /sup 180/Lu to /sup 180/Hf/sup m/, 12:12734 (J;US)

HAFNIUM COMPLEXES
Chemical Preparation
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)
Structural Chemical Analysis
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination

of alkane. Crystal structure of {$ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]]_3$, 12:11864 (J;US)

HAFNIUM COMPOUNDS
Photoelectron Spectroscopy
Photoelectron spectra of metal tetrakis(methyltrihydroborates) and thorium tetrakis(tetrahydroborate), 12:11897 (J;US)

HALDEN HEAVY BOILING WATER REACTOR
See HBWR REACTOR

HALL GENERATORS
See MHD GENERATORS

HALOGENATED ALIPHATIC HYDROCARBONS
See also CHLORINATED ALIPHATIC HYDROCARBONS
FLUORINATED ALIPHATIC HYDROCARBONS
FREONS
Photoelectron Spectroscopy
Electron spectroscopy, 12:11786 (RA;US)

HAMBURG SYNCHROTRON
See DESY

HANDLING (DATA)
See DATA PROCESSING

HANDLING (WASTES)

See HASTELLOYS

HASTELLOY C-4
See HASTELLOYS

HASTELLOYS
Materials Testing
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)

HAZARDOUS MATERIALS
Not for radioactive materials.
Air Pollution
Airborne CO_2 dial (differential absorption lidar) measurement of atmospheric tracer gas concentration distributions, 12:12237 (R;US)
Health-hazard evaluation report HETA 85-083-1705, Summit Finishing Company, Inc., Mooresville, Indiana (Perchloroethylene concentrations), 12:12250 (R;US)
Ammonia
Health0hazard evaluation report HETA 84-132-1703, Purex Industrial Division, Marion, Ohio, 12:12257 (R;US)
Carbon Dioxide
Health-hazard evaluation report HETA 84-248-1694, Wasson Elementary School, Dubois, Pennsylvania, 12:12251 (R;US)
Carcinogens
Health-hazard evaluation report HETA 85-407-1692, Parkway Products, Inc., Cincinnati, Ohio, 12:12253 (R;US)
Combustion
Assessment of inhalation and ingestion population exposures from incinerated hazardous wastes, 12:12265 (J;GB)
Environmental Exposure Pathway
Assessment of inhalation and ingestion population exposures from incinerated hazardous wastes, 12:12265 (J;GB)
Overview of the remedial action priority system (RAPS), 12:11439 (BA;US)
Environmental Transport
Overview of the remedial action priority system (RAPS), 12:11439 (BA;US)
Fumigants
Health-hazard evaluation report HETA 85-329-1708, R. T. French Company, Springfield, Missouri, 12:12254 (R;US)
Ground Disposal
Hazardous waste on public lands, 12:12297 (J;US)
Hydrocarbons
Health-hazard evaluation report HETA 84-248-1694, Wasson Elementary School, Dubois, Pennsylvania, 12:12251 (R;US)
Indoor Air Pollution
Health-hazard evaluation report HETA 84-415-1688, Precision Castparts Corporation, Portland, Oregon (2-ethoxyethanol exposure), 12:12258 (R;US)
Methylene Chloride
Health-hazard evaluation report HETA 85-105-1689, Fibre-Glast Development Corporation, Dayton, Ohio, 12:12255 (R;US)
Health0hazard evaluation report HETA 84-132-1703, Purex Industrial Division, Marion, Ohio, 12:12257 (R;US)
Occupational Safety
Health-hazard evaluation report HETA 84-284-1701, Granite City Steel, Granite City, Illinois, 12:10731 (R;US)
Paints
Walk-through survey report of General Dynamics, Fort Worth, Texas, 12:12259 (R;US)
Particulates
Health-hazard evaluation report HETA 84-510-1691, Rockwell International, Rocky Flats Plant, Golden, Colorado, 12:12256 (R;US)
Risk Assessment
Overview of the remedial action priority system (RAPS), 12:11439 (BA;US)
Waste Disposal
Assessment of inhalation and ingestion population exposures from incinerated hazardous wastes, 12:12265 (J;GB)
Mobile treatment technologies for superfund wastes, 12:12294 (R;US)
Research and development of hazardous/toxic waste analytical screening procedures. Available field methods for rapid screening of hazardous-waste materials at waste sites. Final report, December 1981-December 1982, 12:11436 (R;US)
Waste Management
Waste management operations, Bendix Kansas City Plant, 12:12313 (R;US)

HBWR REACTOR
Fuel Assemblies
Irradiation history and final postirradiation data for IFA-432, 12:11322 (R;US)

HCDA

HELIUM
Scattering
[He-atom surface scattering apparatus for studies of crystalline surface dynamics]: Progress report covering the period from May 1, 1986 to April 30, 1987, 12:11752 (R;US)
HELIUM 3
Convection
Convectively driven superfluid turbulence in dilute solutions of ^{3}He in superfluid ^{4}He, 12:12611 (R;US)
Electron Reactions
Calculation of electromagnetic observables in few-body systems, 12:12636 (R;US)
Ground States
Computational methods for the nuclear and neutron matter problem: Progress report [for the period 1 February 1986-31 January 1987], 12:12757 (R;US)
Hypernuclei
Future hypernuclear experiments at BNL [Brookhaven National Laboratory], 12:12696 (R;US)
HELIUM 3 TARGET
Electron Reactions
Electrodisintegration of few body systems at SLAC and the Y scaling approach, 12:12699 (R;US)
Kaon Minus Reactions
Future hypernuclear experiments at BNL [Brookhaven National Laboratory], 12:12696 (R;US)
Search for a strangeness -2 dibaryon using a ^{3}He target: Report of the E-813 collaboration on plans for ^{3}He target version of the H dibaryon search, 12:12622 (R;US)
Photofission
Nucleon momentum distribution and quasideuteron correlations in sup(3,4)He nuclei, 12:12803 (RA;SU;In Russian)
HELIUM 4
Binding Energy
On the data reliability of light nuclei description on the basis of realistic NN interactions, 12:12763 (R;SU;In Russian)
Convection
Convectively driven superfluid turbulence in dilute solutions of ^{3}He in superfluid ^{4}He, 12:12611 (R;US)
Excited States
On the inelastic form factor of the Osup(+) resonance in sup(4)He nucleus, 12:12780 (RA;SU;In Russian)
Spectrum of collective 0sup(+) - and 1sup(-) - resonances in a sup(4)He nucleus, 12:12772 (RA;SU;In Russian)
Isotope Production
Helium production cross sections for 15-MeV neutrons on /sup 6/Li and /sup 7/Li, 12:12708 (J;US)
Production of tritium and /sup 4/He in a large cylinder of /sup 6/LiD irradiated with 14-MeV neutrons and comparison with Monte Carlo calculations, 12:12700 (J;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Antiproton Reactions
Suppression of the annihilation less break-up processes in antiproton - ^{4}He interaction, 12:12698 (RA;SU;In Russian)
Electron Reactions
Electrodisintegration of few body systems at SLAC and the Y scaling approach, 12:12699 (R;US)
Neutron Reactions
Production of tritium and /sup 4/He in a large cylinder of /sup 6/LiD irradiated with 14-MeV neutrons and comparison with Monte Carlo calculations, 12:12700 (J;US)
Photofission
Nucleon momentum distribution and quasideuteron correlations in sup(3,4)He nuclei, 12:12803 (RA;SU;In Russian)
Photonuclear Reactions
Calculation of electromagnetic observables in few-body systems, 12:12636 (R;US)
Effect of antisymmetry of final states on cross sections of the ^{4}He(γ,p)^{3}H and ^{4}He(γ,n)^{3}He reactions with polarized photons, 12:12821 (R;SU;In Russian)
Proton Reactions
Elastic pα scattering at high energies, 12:12810 (R;SU;In Russian)
HELIUM 6
Photonuclear Reactions
On the nature of resonances in photonuclear reactions. 12:12815 (R;SU)

HELIUM DILUTION REFRIGERATORS
Design
CEBAF cryogenic system design, 12:12134 (RA;US)
Linear Accelerators
Cryogenic system for an experimental superconducting electron accelerator, 12:12044 (RA;SU;In Russian)
Performance
Some aspects of the HERA helium refrigerator, 12:12133 (RA;US)
Superconducting Magnets
Study on a cryogenic module model, 12:12190 (RA;SU;In Russian)
Testing
Nuclear spin-polarized HD, D_2, HT and DT solids, liquids and high density gases: Quarterly status report No. 9, July 1, 1986-September 30, 1986, 12:12864 (R;US)
HELIUM IONS
Ion-Atom Collisions
Recent studies of simultaneous ionization and charge transfer in helium ion-atom collisions, 12:12591 (R;US)
HELIUM METHOD
See ISOTOPE DATING
HEMICELLULOSE
Conversion
Development of a process to produce chemicals from lignocellulose. Final report, 12:11555 (R;US)
HEMOGLOBIN
Biological Functions
Plant hemoglobin properties, function, and genetic origin, 12:12376 (BA;US)
Chemical Properties
Plant hemoglobin properties, function, and genetic origin, 12:12376 (BA;US)
HEPTANE
Adsorption
Study of adsorption kinetic of saturated hydrocarbons in hy zeolites, mordenites and ZSM5, 12:10875 (R;FR;In French)
HERA STORAGE RING
Hadron Elektron Ring Anlage
Superconducting Magnets
Development of superconducting dipoles and construction of prototypes for HERA at Brown Boveri and Company (BBC), 12:12171 (RA;US)
S.C. correction coils and magnets for the HERA proton ring, 12:12175 (RA;US)
Superconducting quadrupoles for HERA, 12:12172 (RA;US)
HEREDITY
See GENETICS
HETEROCYCLIC COMPOUNDS
See also PHTHALOCYANINES
THIONAPHTHENES
Chemical Preparation
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)
Structural Chemical Analysis
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)
HETEROCYCLIC OXYGEN COMPOUNDS
Photolysis
Infrared photochemistry of oxetanes: mechanism of chemiluminescence, 12:11878 (J;US)
HETERODYNE RECEIVERS
Superconducting Devices
Quantum limits of superconducting heterodyne receivers. Annual report, 15 May 1985-14 May 1986, 12:11921 (R;US)
HEVEA
Disease Resistance
Rubber tree resistance to Microcyclus ulei through induced mutation. I. Determination of radiosensivity in rubber, 12:12492 (RA;BR;In Portuguese)
Genome Mutations
Rubber tree resistance to Microcyclus ulei through induced mutation. I. Determination of radiosensivity in rubber, 12:12478 (RA;BR;In Portuguese)
Rubber tree resistance to Microcyclus ulei through induced mutation. I. Determination of radiosensivity in rubber, 12:12492 (RA;BR;In Portuguese)
Radiation Induced Mutants
Rubber tree resistance to Microcyclus ulei through induced mutation. I. Determination of radiosensivity in rubber, 12:12492 (RA;BR;In Portuguese)
Radiosensitivity
Rubber tree resistance to Microcyclus ulei through induced mutation. I. Determination of radiosensivity in rubber, 12:12478 (RA;BR;In Portuguese)
HEXAHYDROPYRIDINES
See PIPERIDINES
HEXANE
Adsorption
Study of adsorption kinetic of saturated hydrocarbons in hy zeolites, mordenites and ZSM5, 12:10875 (R;FR;in French)
Bubble Growth
Superheating and bubble growth within multicomponent fuel droplets, 12:11901 (RA;US)
Solvent Properties
Photoexcited charge pair escape and recombination: Final report for period July 1, 1983-July 31, 1986, 12:11871 (R;US)
Superheating
Superheating and bubble growth within multicomponent fuel droplets, 12:11901 (RA;US)
HF RADIATION
See SHORT WAVE RADIATION
HFIR REACTOR
Neutron Transport
Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru, 12:12711 (BA;US)
Nuclear Reaction Kinetics
Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru, 12:12711 (BA;US)
HIGGS BOSONS
Detection
Detection of Higgs bosons decaying to bottom quarks, 12:12660 (R;US)
Hadronic Particle Decay
Detection of Higgs bosons decaying to bottom quarks, 12:12660 (R;US)
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Bibliographies

HOLES
Absence of electrons from otherwise filled electron bands; see also BLACK HOLES, CAVITIES, OPENINGS, BOREHOLES, and VOIDS.
Trapping
Deep level effects in silicon and germanium after plasma hydrogenation, 12:11682 (J;US)
HOLMIUM 165 TARGET
Alpha Reactions
Breakup-fusion description of nonequilibrium protons from (α,p) reactions, 12:12834 (J;NL)
Iron 56 Reactions
[Studies of heavy-ion induced reactions]: Annual progress report, 12:12702 (R;US)
Neon 20 Reactions
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)
HOLMIUM SULFIDES
Magnetic Susceptibility
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors. Ph.D. Thesis, 12:11618 (R;NL;In Dutch)
Superconductivity
Investigation of three ferromagnetic superconductors in the milli-Kelvin area. Ph.D. Thesis, 12:11619 (R;NL;In Dutch)
HONDURAS
Hot Springs
Catalog of known hot springs and thermal place names for Honduras, 12:11088 (R;US)
Thermal Springs
Catalog of known hot springs and thermal place names for Honduras, 12:11088 (R;US)
Reconnaissance evaluation of Honduran geothermal sites, 12:11087 (R;US;In English and Spanish)
HORDEUM
See BARLEY
HORIZONTAL AXIS TURBINES
Fatigue
Nibe measurement programme. Fatigue measurements (Wind turbines), 12:11106 (R;DK;In Danish)
Performance Testing
Measurements of performance of a rotor with 8-m wind turbine blades from Micon Airfoil Technology, 12:11115 (R;DK)
Service Life
Nibe measurement programme. Fatigue measurements (Wind turbines), 12:11106 (R;DK;In Danish)
HORMONES
Labelling
Preparation of a homogeneous extract of human growth hormone, isohormone B, and its ^{125}I-labelling for utilization in radioligand assays, 12:11889 (R;BR;In Portuguese)
HOT GAS CLEANUP
Economics
Alternative combustion turbine designs and cleanup systems for pressurized fluidized-bed combustion (PFBC) power plants: Final report, 12:11152 (R;US)
Electrostatic Precipitators
Evaluation of three high-temperature particle control devices for coal gasification, 12:10736 (BA;GB)
Filters
Evaluation of three high-temperature particle control devices for coal gasification, 12:10736 (BA;GB)
HOT PLASMA
Ion Acoustic Waves
Linear and nonlinear response of ion acoustic waves driven by optical mixing, 12:12937 (D;US)
Microwave Heating
Linear and nonlinear response of ion acoustic waves driven by optical mixing, 12:12937 (D;US)
HOT WATER HEATERS

HYDRONIUM RADICALS
Infrared Spectra
Methylene: a paradigm for computational quantum chemistry, 12:11844 (J;US)
HYDROPEROXY RADICALS
HO2
Chemical Reaction Yield
Track Effects in water radiolysis with high-energy heavy ions, 12:11895 (J;US)
HYDROXIDES
See also CALCIUM HYDROXIDES
IRON HYDROXIDES
SODIUM HYDROXIDES
Liquid Column Chromatography
Separation and characterization of hydroxyl aromatic in complex fractions from nondistillable coal-derived liquids, 12:10752 (J;US)
Mass Spectroscopy
Separation and characterization of hydroxyl aromatic in complex fractions from nondistillable coal-derived liquids, 12:10752 (J;US)
HYDROXYACETIC ACID
See GLYCOLIC ACID
HYDROXYBENZENE
See PHENOL
HYDROXYL IONS
See ANIONS
HYDROXIDES
HYDROXYL RADICALS
Chemical Reaction Kinetics
Hydrogen-atom abstraction from alkanes by OH. 4. Isobutane, 12:11825 (J;US)
Hydrogen-atom abstraction from alkanes by OH. 5. n-Butane, 12:11830 (J;US)
HYDROXYPROPIONIC ACID-ALPHA
See LACTIC ACID
HYDROXYXYLENES
See XYLENOLS
HYPERFRAGMENTS
See HYPERNUCLEI
HYPERNUCLEI
Sigma Minus
Effect of nuclear spin-orbit interaction in light Σ-atoms, 12:12806 (R;SU)
HYPERTHERMIA
Implants
Completely implantable hyperthermia applicator with externalized temperature monitoring: Tests in conductive gel, 12:12406 (J;US)
Temperature Monitoring
Completely implantable hyperthermia applicator with externalized temperature monitoring: Tests in conductive gel, 12:12406 (J;US)
HYPOIODOUS ACID
Oxidation
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)
Reduction
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)

I

I CODES
INGEN: A COBRA-NC input generator user's manual, 12:12996 (R;US)
ICR HEATING
Impurities
VUV study of impurity generation during ICRF heating experiments on the Alcator C tokamak, 12:12933 (D;US)
IGNEOUS ROCKS
Deformation
High temperature experiments on the elastic and an elastic behaviour of magmatic rocks, 12:12557 (RA;DE)
Geochemistry
Petrography, structure and geochemistry of nepheline syenites from the Pocos de Caldas alkaline massif, states of Minas Gerais and Sao Paulo, Brazil, 12:12287 (R;BR;In Portuguese)
Petrology
Petrography, structure and geochemistry of nepheline syenites from the Pocos de Caldas alkaline massif, states of Minas Gerais and Sao Paulo, Brazil, 12:12287 (R;BR;In Portuguese)
ILLINOIS
Energy Sources
New energy technologies for Illinois and the Midwest: Proceedings, 12:11452 (R;US)
ILLITE
Sorptive Properties
Nuclear waste chemistry, 12:12559 (RA;US)
IMAGE PROCESSING
Fourier Analysis
Neural network modeling of early retinal vision processes, 12:12985 (R;US)
IMIDES
Chemical Preparation
Nuclear medicine: Progress report for quarter ending June 30, 1986, 12:12405 (R;US)
Labelling
Nuclear medicine: Progress report for quarter ending June 30, 1986, 12:12405 (R;US)
IMMUNOGLOBULINS
Labelling
Nuclear medicine: Progress report for quarter ending June 30, 1986, 12:12405 (R;US)
IMPERFECTIONS
See DEFECTS
IMPURITIES
Unwanted constituents, not for TRACE AMOUNTS, INTERFERING ELEMENTS, or metal and nonmetal additions.
Transport Theory
Analysis of neutral beam driven impurity flow reversal in PLT, 12:12918 (R;US)
INCINERATION
See COMBUSTION
INCOLOY 800
Mechanical Properties
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
INCOME
Forecasting
Natural gas revenues in The Netherlands 1985-2000, 12:10886 (R;NL;DU)
INCOMPRESSIBLE FLOW
Numerical Solution
A generalized MAC [Marker-and-Cell] method for incompressible fluid flow, 12:12610 (R;US)

INCONEL 600
Crack Propagation
Corrosion evaluation of alloys for nuclear waste processing, 12:11651 (BA;US)
Intergranular Corrosion
Evaluation of intergranular attack on Alloy 600: Volume 1, Evaluation of causes: Final report, 12:11617 (R;US)
Materials Testing
Evaluation of intergranular attack on Alloy 600: Volume 1, Evaluation of causes: Final report, 12:11617 (R;US)
Stress Corrosion
Corrosion evaluation of alloys for nuclear waste processing, 12:11651 (BA;US)
Tubes
Evaluation of intergranular attack on Alloy 600: Volume 1, Evaluation of causes: Final report, 12:11617 (R;US)
INCONEL 690
Crack Propagation
Corrosion evaluation of alloys for nuclear waste processing, 12:11651 (BA;US)
Stress Corrosion
Corrosion evaluation of alloys for nuclear waste processing, 12:11651 (BA;US)
INCONEL 718
Seals
Chemistry of glass-ceramic to metal bonding for header applications: 2. Hydrogen bubble formation during glass-ceramic to metal sealing, 12:11595 (R;US)
INDIAN POINT-3 REACTOR
Buchanan, New York, USA
Reactor Safety
Seismic/dynamic fragility and systems interaction study at Indian Point - 3, 12:11388 (RA;US)
Seismic Effects
Seismic/dynamic fragility and systems interaction study at Indian Point - 3, 12:11388 (RA;US)
Systems Analysis
Seismic/dynamic fragility and systems interaction study at Indian Point - 3, 12:11388 (RA;US)
INDIUM 115 TARGET
Neutron Reactions
Absolute measurements of the /sup 115/In(n,γ)/sup 116m1/In cross section for fast neutrons, 12:12725 (J;US)
INDIUM SULFIDES
Chemical Vapor Deposition
The preparation of thin films for photovoltaic conversion by novel MOCVD [metallorganic chemical vapour deposition] techniques: Annual subcontract report, 15 February 1985-15 April 1986, 12:11047 (R;US)
Electronic Structure
Study of local states in $CdIn_2S_4$, 12:11715 (RA;SU;In Russian)
INDONESIA
Carpooling
Economic analysis of vehicle-sharing mode for journey to work by Indonesian office employees. Master's thesis, 12:11547 (R;US)
Vanpooling
Economic analysis of vehicle-sharing mode for journey to work by Indonesian office employees. Master's thesis, 12:11547 (R;US)
INDOOR AIR POLLUTION
Air Pollution Abatement
Reduction of radon progeny in indoor air. Master's thesis, 12:12266 (R;US)
Control Systems
Indoor air quality of a building and the requirement adapted ventilation system, 12:11539 (R;FI;In Finnish)
Dusts
Quality of indoor air and demand of ventilation in buildings, 12:11425 (R;FI;In Finnish)
Formaldehyde
Quality of indoor air and demand of ventilation in buildings, 12:11425 (R;FI;In Finnish)
Radon
Quality of indoor air and demand of ventilation in buildings, 12:11425 (R;FI;In Finnish)
Tobacco Smokes
Quality of indoor air and demand of ventilation in buildings, 12:11425 (R;FI;In Finnish)
INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
COAL PREPARATION PLANTS
ETHANOL PLANTS
OIL SHALE PROCESSING PLANTS
PETROLEUM REFINERIES
Boiler Fuels
Industrial and power plant natural gas demands, 12:11164 (RA;US)
Boilers
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)
Combustors
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)
Electricity
Utilization of mechanical compression of steam in large-scale industry, 12:11567 (R;FI;In Finnish)
Energy Analysis
Long-run projections of state-level commercial and residential energy use, 12:11546 (BA;US)
Furnaces
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)
Kilns
Alternative coal combustion systems: [Final report], 12:10829 (R;NZ)
Load Management
Energy economic control of electricity consumption. Large industry, 12:11572 (R;FI;In Finnish)
Process Control
Pioneer plants study user's manual, 12:11912 (R;US)
Steam
Utilization of mechanical compression of steam in large-scale industry, 12:11567 (R;FI;In Finnish)
INDUSTRIAL RADIOGRAPHY
See also BIOMEDICAL RADIOGRAPHY.
Expert Systems
WELDEX: An expert system for non-destructive testing of welds, 12:13008 (BA;US)
Image Processing
Radiographic image enhancement (For testing confined pinch tube welds), 12:11999 (R;US)
INDUSTRIAL SECTOR
See INDUSTRY
INDUSTRY
See also AEROSPACE INDUSTRY
AGRICULTURE
AUTOMOTIVE INDUSTRY
CHEMICAL INDUSTRY
COAL INDUSTRY
ELECTRIC POWER INDUSTRY
FOOD INDUSTRY
GLASS INDUSTRY
METAL INDUSTRY
NATURAL GAS INDUSTRY
NUCLEAR INDUSTRY
PRINTING AND PUBLISHING INDUSTRY
WOOD PRODUCTS INDUSTRY
Competition
Energy and US industrial competitiveness in world markets, 12:11460 (R;US)
Dual-Purpose Power Plants
The outlook for industrial cogeneration in Western Europe (gas turbines in the early nineties), 12:11558 (R;NL)
Energy Conservation
1985 commercial and industrial survey: Customers of municipal and cooperative distributors of TVA [Tennessee Valley Authority] power, 12:11474 (R;US)
Energy Consumption
1985 commercial and industrial survey: Customers of municipal and cooperative distributors of TVA [Tennessee Valley Authority] power, 12:11474 (R;US)
Energy economic control of electricity consumption. Large industry, 12:11572 (R;FI;In Finnish)

Energy use in Kenya industry, 1983: A survey and analysis of industrial energy consumption, 12:11476 (R;KE)
Technical-economic model for the industrial energy consumption in Denmark, 12:11430 (R;DK;In Danish)
Occupational Safety
Self-evaluation of occupational safety and health programs, 12:12430 (R;US)
Power Demand
Energy economic control of electricity consumption. Large industry, 12:11572 (R;FI;In Finnish)
Tracer Techniques
Preparation of labelled compounds for tracer investigations in industry, 12:11893 (RA;DD;In German)
INFORMATION RETRIEVAL
Data Base Management
Implementation of a multi-lingual database system - multi-backend database system interface. Master's thesis, 12:12981 (R;US)
INFORMATION SYSTEMS
Data Base Management
Extractors manual for Oil Shale Data Base System: Major Plants Data Base, 12:10890 (R;US)
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Test Data Data Base, 12:10710 (R;US)
Extractors manual for Integrated Gasification Combined Cycle Data Base System: Major Plants Data Base, 12:10709 (R;US)
Planning
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, October-December 1986, 12:10771 (R;US)
INFRARED RADIATION
Radiation Detection
Coherent infrared detection, volume C. Final report, 12:11958 (R;AT)
INFRARED SPECTRA
Least Square Fit
Partial least-squares methods applied to the quantitative analysis of infrared spectra, 12:11798 (BA;US)
INHOMOGENEOUS PLASMA
Plasma Waves
Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency, 12:12923 (R;BR)
Tokamak Devices
Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency, 12:12923 (R;BR)
INJURIES
See also RADIATION INJURIES
Epidemiology
Injury mortality among employees of Los Alamos National Laboratory: A pilot study, 12:12532 (R;US)
INKS
Production
Heuristic modeling, 12:12997 (RA;US)
INSECTICIDES
Decomposition
^{14}C-carbaril metabolism in soils modified by organic matter oxidation and addition of glucose, 12:12435 (RA;BR;In Portuguese)
^{14}C-carbaril metabolism in soils modified by organic matter oxidation and addition of glucose, 12:12448 (RA;BR;In Portuguese)
INSECTS
Biological Radiation Effects
Influence of ^{60}Co gamma radiation on longevity and induced sterility in imagos of Laemophloeus ferrugineus (Stephens, 1831) (Col. Cucujidae), 12:12505 (RA;BR;In Portuguese)
Environmental Effects
Effects of bark beetle outbreaks on species composition, biomass, and nutrient distribution in a mixed deciduous forest, 12:12281 (R;US)
Gamma Radiation
Influence of two Phaseolus vulgaris cultivars on the determination of the gamma radiation sterilizing dose in imagos of Acanthoscelides obtectus (Say, 1831) (Col., Bruchidae), 12:12508 (RA;BR;In Portuguese)
Radiosterilization
Determination of the gamma radiation sterilizing dose for adults of Sitophilus granarius (L., 1758) (Col., Curulionidae) in wheat, 12:12504 (RA;BR;In Portuguese)
Determination of sterilizing doses of gamma radiation on imagos of Callosobruchus analis (Fabr., 1755) and C. maculatus (Fabr.,1792) in Cicer arietenum CV. 'grao de bico' and Vigna Sinensis CV. 'serido', 12:12507 (RA;BR;In Portuguese)
Influence of ^{60}Co gamma radiation on longevity and induced sterility in imagos of Laemophloeus ferrugineus (Stephens, 1831) (Col. Cucujidae), 12:12505 (RA;BR;In Portuguese)
Influence of two Phaseolus vulgaris cultivars on the determination of the gamma radiation sterilizing dose in imagos of Acanthoscelides obtectus (Say, 1831) (Col., Bruchidae), 12:12508 (RA;BR;In Portuguese)
IN-SITU COMBUSTION
Evaluation
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
IN-SITU GASIFICATION
Bench-Scale Experiments
Physical simulations of underground coal gasification in an eastern bituminous coal, 12:10705 (R;US)
Uses
Survey of tar sand deposits, heavy oil fields, and shallow light oil fields of the United States for underground coal gasification applications, 12:10769 (R;US)
INSTRUMENTS (MEASURING)
See MEASURING INSTRUMENTS
INSULATING LIMITERS
See LIMITERS
INSULATING OILS
Combustion Products
Polychlorinated dibenzofurans (PCDF) and polychlorinated dibenzo-p-dioxins (PCDD) in utility transformers and capacitors: Volume 1, Formation of PCDF and PCDD in askarels and contaminated mineral oil equipment: Final report, 12:11200 (R;US)
INSULATION (THERMAL)
See THERMAL INSULATION
INTEGRAL EQUATIONS
Analytical Solution
Harmonic analysis of a source identification problem, 12:13012 (J;US)
INTEGRAL PAC
Neutron Transport Theory
Evaluation of angular integrals in the generation of transfer matrices for multigroup transport codes, 12:11238 (R;BR;In Portuguese)
Transfer Matrix Method
Evaluation of angular integrals in the generation of transfer matrices for multigroup transport codes, 12:11238 (R;BR;In Portuguese)
INTERACTING BOSON MODEL
Symmetry
Dynamical symmetries in nuclear structure, 12:12752 (R;US)
Tamm-Dancoff Method
Modified Tamm-Dancoff method for determination of microscopic structure of α boson and interacting boson model parameters, 12:12799 (RA;SU;In Russian)
INTERCONNECTED POWER SYSTEMS
Energy Conservation
Energy conservation by improved control of bulk power transfers on interconnected systems: Final technical progress report, 12:11195 (R;US)
Power Pooling
Analysis of power wheeling services, 12:11201 (R;US)
Power Transmission
Energy conservation by improved control of bulk power transfers on interconnected systems: Final technical progress report, 12:11195 (R;US)
INTERLOCKS
Radiation interlocks: The choice between conventional hard-wired logic and computer-based systems, 12:11939 (R;US)

INTERMEDIATE MASS NUCLEI

Iron and sulfur determination in coal using reaction (n,γ) and BGO scintillator, 12:11757 (RA;CS;In Czech)
Quantitative Chemical Analysis
Spectrophotometric determination of iron in process samples from the chemical cleaning of coal, 12:10734 (J;GB)
Removal
Spectrophotometric determination of iron in process samples from the chemical cleaning of coal, 12:10734 (J;GB)
Self-Diffusion
Chemical and tracer diffusion in nonstoichiometric binary oxides, 12:11865 (J;GB)
Spectrophotometry
Spectrophotometric determination of iron in process samples from the chemical cleaning of coal, 12:10734 (J;GB)
Trace Amounts
Point defects and the mechanisms of electrical conduction in olivine, 12:11744 (BA;US)
X-Ray Fluorescence Analysis
The determination by x-ray fluorescence of platinum, palladium, ruthenium, iron, and chromium in special steels, 12:11780 (R;ZA)

IRON 56 TARGET
Iron 56 Reactions
[Studies of heavy-ion induced reactions]: Annual progress report, 12:12702 (R;US)

IRON 57 TARGET
Neutron Reactions
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)

IRON 58 TARGET
Neutron Reactions
Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru, 12:12711 (BA;US)

IRON 60
Half-Life
Half-life of ^{60}Fe, 12:12715 (J;NL)

IRON ALLOYS
See also HASTELLOYS
INCONEL 600
IRON BASE ALLOYS
Chemical Preparation
Hard metal composition, 12:11643 (P;US)
Creep
Creep behavior of the ordered intermetallic (Fe,Ni)Al phase, 12:11663 (BA;US)
Density
Density of Fe-Si-B metallic glasses, 12:11627 (R;HU)
Hardness
Hard metal composition, 12:11643 (P;US)
Mechanical Properties
High temperature properties of equiatomic FeAl with ternary additions, 12:11661 (BA;US)
Phase Transformations
High temperature properties of equiatomic FeAl with ternary additions, 12:11661 (BA;US)
Powder Metallurgy
High temperature properties of equiatomic FeAl with ternary additions, 12:11661 (BA;US)
Research Programs
B2 aluminides as alternative materials, 12:11665 (BA;US)

IRON BASE ALLOYS
See also STEELS
Fatigue
Time and temperature-dependent processes affecting near threshold fatigue crack growth, 12:11603 (R;US)
Hydrogen Embrittlement
Role of surface processes in the gaseous hydrogen embrittlement of steels, 12:11683 (BA;US)
Internal Friction
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Magnetic Properties
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Oxidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)
Shear Properties
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Sulfidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)

IRON CHLORIDES
Catalytic Effects
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)

IRON COMPLEXES
See also FERROCENE
FERROCYANIDES
Absorption Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
Catalytic Effects
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
Chemical Preparation
Electrochemical, spectral, and base-binding studies of heterodinuclear ruthenium-iron complexes of meso-α,α,α,α-tetrakis(nicotinamidophenyl)porphine, 12:11841 (J;US)
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
Molecular Structure
Electrochemical, spectral, and base-binding studies of heterodinuclear ruthenium-iron complexes of meso-α,α,α,α-tetrakis(nicotinamidophenyl)porphine, 12:11841 (J;US)
Oxidation
Metal arene complexes in coal structure determination: Quarterly report for the period, September 1986-November 1986 (Arenetricarbonylchromium complex anion; arene iron complex anion), 12:10745 (R;US)
Spectrophotometry
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
X-Ray Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)

IRON COMPOUNDS
See also IRON CHLORIDES
IRON HYDRIDES
IRON HYDROXIDES
IRON OXIDES
Dissolution
Anodic dissolution of iron phthalocyanine film electrodes, 12:11870 (J;US)
Reduction
Inhibitor studies of dissimilative Fe(III) reduction by Pseudomonas sp. strain 200 (Pseudomonas ferrireductans), 12:12428 (J;US)

IRON HYDRIDES
Electronic Structure
Theory of electronic states in disordered alloy hydrides, 12:11695 (BA;US)
IRON HYDROXIDES
Sorptive Properties
Interaction of Np(V)O_2i with common mineral surfaces in dilute aqueous solutions and seawater, 12:11899 (J;NL)
Uranium and radium sorption on amorphous ferric oxyhydroxide, 12:12312 (J;NL)
IRON OXIDES
Diffusion
Chemical and tracer diffusion in nonstoichiometric binary oxides, 12:11865 (J;GB)
Structural Chemical Analysis
Chemical and tracer diffusion in nonstoichiometric binary oxides, 12:11865 (J;GB)
IRRADIATION CAPSULES
Burnout
Out-of-pile burnout experiments in a full-scale simulation of an irradiation rig in a HIFAR hollow fuel element facility, 12:11262 (R;AU)
IRRIGATION
Wind-Powered Pumps
Prospects for small and marginal farmers in Trichy district (Tamil Nadu, India) to use water pumping windmills for irrigation, 12:11105 (R;NL)
ISING MODEL
Computerized Simulation
Microcanonical simulation of the three-dimensional random-field Ising model, 12:12872 (J;US)
Phase Transformations
Microcanonical simulation of the three-dimensional random-field Ising model, 12:12872 (J;US)
ISOBARIC ANALOGS
Binding Energy
Empirical regularities for binding energy depending on isospin, 12:12795 (RA;SU;In Russian)
Coulomb Energy
Coulomb energies for isobar-analog states of the s-d-shell nuclei, 12:12794 (RA;SU;In Russian)
Isospin
Isospin mixing in mean-heavy nuclei, 12:12789 (RA;SU;In Russian)
ISOBUTANE
See 2-METHYLPROPANE
ISOCHRONOUS CYCLOTRONS
See also BROOKHAVEN CYCLOTRON
TRIUMF CYCLOTRON
Heavy Ion Accelerators
Cyclic heavy ion implantator for applied purposes, 12:12026 (RA;SU;In Russian)
Proton Beams
Beam quality during integer resonance passage in a kaon factory, 12:12068 (RA;SU;In Russian)
ISOELECTRONIC ATOMS
Energy Levels
Perturbation theory for the hydrogen-like atom in a field of a point charge on the group O(4.2) basis, 12:12590 (R;SU;In Russian)
ISOMERASES
Code number 5.
Chemical Preparation
Unique, one-step, double isomerization (2E, 4Z ⇌ 2Z, 4E) of 6-oxo-2,4-heptadienoic acid catalyzed by maleylacetone cis-trans isomerase, 12:12352 (J;US)
Isomerization
Unique, one-step, double isomerization (2E, 4Z ⇌ 2Z, 4E) of 6-oxo-2,4-heptadienoic acid catalyzed by maleylacetone cis-trans isomerase, 12:12352 (J;US)
NMR Spectra
Unique, one-step, double isomerization (2E, 4Z ⇌ 2Z, 4E) of 6-oxo-2,4-heptadienoic acid catalyzed by maleylacetone cis-trans isomerase, 12:12352 (J;US)
ISOMERS
Only for geometrical isomers and stereoisomers in chemistry; see also ISOMERIC NUCLEI and FISSION ISOMERS.
Fluorescence
Excited-state dynamics of the intramolecular proton transfer of 3-hydroxyflavone in the absence of external hydrogen-bonding interactions, 12:11851 (J;NL)
Liquid Column Chromatography
Solvent selectivity studies using isomers of polystyrene, 12:11860 (J;NL)
Qualitative Chemical Analysis
Differentiation of polycyclic aromatic hydrocarbons using electron capture negative chemical ionization, 12:11852 (J;GB)
ISOPENTANE
See 2-METHYLBUTANE
ISOTOPE DATING
Argon
Geochronologic (K-Ar/Fission track) east-west profile of the Rio Grande do Sul shield, 12:12533 (R;BR;In Portuguese)
Geochronologic (K-Ar/Fission Track) east-west profile of the Rio Grande do Sul shield, 12:12535 (R;BR;In Portuguese)
Potassium
Geochronologic (K-Ar/Fission track) east-west profile of the Rio Grande do Sul shield, 12:12533 (R;BR;In Portuguese)
Geochronologic (K-Ar/Fission Track) east-west profile of the Rio Grande do Sul shield, 12:12535 (R;BR;In Portuguese)
ISOTOPE ENRICHMENT
See ISOTOPE SEPARATION
ISOTOPE PRODUCTION REACTORS
For the production of radioisotopes to be used in any application such as medicine, agriculture, industry, etc; not for tritium production.
See also HFIR REACTOR
TRIGA-2-RIKKYO REACTOR
TRIGA-BRAZIL REACTOR
UFTR REACTOR
Design
Neutronic calculations for a new high flux reactor, 12:11242 (BA;US)
Preliminary reactor design for the center for neutron research, 12:11316 (RA;US)
Reactor Physics
Neutronic calculations for a new high flux reactor, 12:11242 (BA;US)
ISOTOPE SEPARATION
For separation of isotopes of the same element only.
Nuclebras
Researches on uranium enrichment carried out in Centro de Desenvolvimento da Tecnologia Nuclear, 12:11781 (R;BR;In Portuguese)
Research Programs
Researches on uranium enrichment carried out in Centro de Desenvolvimento da Tecnologia Nuclear, 12:11781 (R;BR;In Portuguese)
ISOTOPIC SEPARATION
See ISOTOPE SEPARATION
ITALY
See also SICILY
Climates
27. meteorological yearbook 1985 of Ispra, 12:12278 (R;DE;In Italian)
ITEP SYNCHROTRON
Institute of Theoretical and Experimental Physics Synchrotron.
Orbit Stability
System for orbit vertical correction in the ITEP proton synchrotron, 12:12055 (RA;SU;In Russian)

J

JAILS
See PUBLIC BUILDINGS
JAPAN
Fossil-Fuel Power Plants
Coal-fired power plants in Japan, 12:11177 (J;US)

JAPAN ATR FUGEN

JATR REACTOR
Fuel Cans
In cell measurements of crud and corrosion of BWR and HWR fuels at reef, JAERI, 12:11216 (RA;XA)
JET ENGINE FUELS
Aging
Data evaluation and technique development for analysis of JP-5 fuels. Status report, 12:10878 (R;US)
Combustion
Phenomenological study of the behavior of some silica formers in a high-velocity jet fuel burner. Technical memo, 12:11579 (R;US)
Contamination
Techniques to determine particulates in liquid fuels. Status report, 12:10877 (R;US)
Fuel Additives
Data evaluation and technique development for analysis of JP-5 fuels. Status report, 12:10878 (R;US)
Kerosene
Antimisting-fuel research and development for commercial aircraft. Final summary report, 12:10860 (R;US)
Quantitative Chemical Analysis
Data evaluation and technique development for analysis of JP-5 fuels. Status report, 12:10878 (R;US)
Yields
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes: Fourteenth interim report, Processing of Wyodak CTSL [catalytic two-stage liquefaction] oil and related experimental studies, 12:10701 (R;US)
JETS
Heat Transfer
Heat transfer to impinging air jets, 12:11986 (RA;US)
JINR SYNCHROTRON
Ion Sources
Li, C and Mg nuclei acceleration in the JINR synchrophasotron from the CO_2 laser ion source, 12:12149 (RA;SU;In Russian)
Multicharged Ions
Li, C and Mg nuclei acceleration in the JINR synchrophasotron from the CO_2 laser ion source, 12:12149 (RA;SU;In Russian)
Nuclei
Relativistic nuclear beam production for physical experiments on the JINR synchrotron, 12:12022 (RA;SU;In Russian)
Superconducting Magnets
Cryogenic system for the superconducting synchrotron SPIN, 12:12048 (R;SU;In Russian)
JOINTS (ANATOMY)
See BONE JOINTS
JOSEPHSON JUNCTIONS
Harmonic Generation
One-third (period three) harmonic generation in microwave-driven Josephson tunnel junctions, 12:11945 (J;US)
JOURNAL BEARINGS
Wear
Determination of the wear of thermoplastic journal bearings in the initial strain, 12:11722 (R;AT)
JUICES
See BEVERAGES

K

KAOLINITE
Sorptive Properties
Interaction of Np(V)O_2i with common mineral surfaces in dilute aqueous solutions and seawater, 12:11899 (J;NL)
KAON MINUS-PROTON INTERACTIONS
Particle Production
A study of strange and strangeonium states produced in LASS [Large Aperture Superconducting Solenoid], 12:12639 (R;US)
KAON-NUCLEON INTERACTIONS
Scattering
Partial wave analyses of hadron scattering below 2 GeV: Progress report, May 1, 1986-December 31, 1986, 12:12644 (R;US)
KEK INTERS. STORAGE ACCELERATOR
See TRISTAN STORAGE RINGS
KEK SYNCHROTRON
Japan National Lab for High Energy Physics Synchrotron.
Superconducting Magnets
Superconducting dipole and quadrupole magnets in KEK, 12:12080 (RA;US)
KENYA
Energy Consumption
Energy use in Kenya industry, 1983: A survey and analysis of industrial energy consumption, 12:11476 (R;KE)
KEROSENE
Fuel Additives
Antimisting-fuel research and development for commercial aircraft. Final summary report, 12:10860 (R;US)
KICKER MAGNETS
Storage Rings
Development of the UNK kicker magnet prototype section, 12:12191 (RA;SU;In Russian)
KINASES
See PHOSPHOTRANSFERASES
KINASES (PHOSPHOTRANSFERASES)

KLEBSIELLA
Nitrogen Fixation
Biochemical genetics of nitrogen fixation of Klebsiella pneumoniae, 12:12377 (BA;US)
KNK-2 REACTOR
Leopoldshafen, Karlsruhe, Federal Republic of Germany
Computerized Control Systems
Application of a fault-tolerant microprocessor-based core-surveillance system in a German fast breeder reactor, 12:11235 (RA;US)
KNOCK-ON ELECTRONS
See ELECTRONS
KOZLODUY-1 REACTOR
Kozloduj, Bulgaria
Primary Coolant Circuits
Crud build-up and migration processes in the primary coolant circuit of Nuclear Power Plant Kozlodui, 12:11229 (RA;XA)
KOZLODUY-2 REACTOR
Kozloduj, Bulgaria
Primary Coolant Circuits
Crud build-up and migration processes in the primary coolant circuit of Nuclear Power Plant Kozlodui, 12:11229 (RA;XA)
KRYPTON
Ion-Atom Collisions
Recent studies of simultaneous ionization and charge transfer in helium ion-atom collisions, 12:12591 (R;US)
KRYPTON 78
E1-Transitions
Calculation of the E1-transition probabilities in sup(78)Se, sup(78)Kr with account for microscopic structure of excited states of octupole and quadrupole type, 12:12779 (RA;SU;In Russian)
KRYPTON 80 TARGET
Deuteron Reactions
Q-value determination for the /sup 80/Kr(d,p)/sup 81/Kr reaction, 12:12714 (J;US)
KRYPTON 81
Mass
Q-value determination for the /sup 80/Kr(d,p)/sup 81/Kr reaction, 12:12714 (J;US)
Resonance Ionization Mass Spectroscopy
Noble gas detection using resonance ionization spectroscopy and a quadrupole mass spectrometer, 12:11808 (J;US)

KRYPTON FLUORIDE LASERS
Use of incoherence to produce smooth and controllable irradiation profiles with KrF fusion lasers. Memorandum report, 12:12940 (R;US)

L

LA REINA REACTOR
See RESEARCH REACTORS
LA SALLE COUNTY-1 REACTOR
Control Rooms
Fire environment determination in the LaSalle NPP control room, 12:11325 (R;US)
Fire Hazards
Fire environment determination in the LaSalle NPP control room, 12:11325 (R;US)
LA SALLE COUNTY-2 REACTOR
Control Rooms
Fire environment determination in the LaSalle NPP control room, 12:11325 (R;US)
Fire Hazards
Fire environment determination in the LaSalle NPP control room, 12:11325 (R;US)
LABELLED COMPOUNDS
Compounds labelled with either stable or radioactive isotopes.
See also CARBON 14 COMPOUNDS
RADIOPHARMACEUTICALS
Chemical Preparation
Preparation of labelled compounds for tracer investigations in industry, 12:11893 (RA;DD;In German)
Comparative Evaluations
Radiolabeled red blood cells: status, problems, and prospects, 12:12353 (BA;US)
LABORATORIES
Remote Handling Equipment
Laboratory robotics projects in the Analytical Development Division at the Savannah River Laboratory, 12:11934 (R;US)
LACTIC ACID
Production
Development of a process to produce chemicals from lignocellulose. Final report, 12:11555 (R;US)
LAKES
Acidification
Paleoecological investigation of recent lake acidification: Methods and project description: Interim report, 12:12325 (R;US)
LAMBDA NEUTRAL
See LAMBDA PARTICLES
LAMBDA PARTICLES
Particle Production
The anti pp yields anti λ λ reaction near threshold, 12:12623 (R;US)
Weak Particle Decay
The weak decay of hypernuclei, 12:12624 (R;US)
LAMELLAE
Mechanical Properties
Temperature dependent nonlinear metal matrix laminae behavior. Final technical report, December 1984-November 1985, 12:11720 (R;US)
LAMPF LINAC
Remote Handling Equipment
Possibilities for studying short-lived nuclei produced at LAMPF, 12:12169 (BA;US)
LAND APPLICATION
See GROUND DISPOSAL
LAND USE
Planning
Resource Management Plan for the Oak Ridge Reservation: Volume 22, Resource information and site analysis for planning on the Oak Ridge Reservation, 12:12317 (R;US)
Recommendations
Wildlife protection, mitigation and enhancement planning for Grand Coulee Dam: Final report, 12:12315 (R;US)
LANGMUIR OSCILLATIONS
See PLASMA WAVES

LANTHANUM
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
LANTHANUM 140
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
LANTHANUM SULFIDES
Superconductivity
Superconductivity of thin-film inatermetallic compounds. Annual technical report, 1 September 1985-31 August 1986, 12:11707 (R;US)
LASER CAVITIES
Design
Soft x-ray laser cavities, 12:11963 (R;US)
LASER DRILLING
Neodymium Lasers
Precision cutting and drilling with the Nd-YAG laser, 12:11965 (R;US)
LASER MATERIALS
Cladding
Process development for applying a cladding glass to the edges of GSGG crystals: Final technical report, 12:11962 (R;US)
Efficiency
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
Fabrication
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
LASER RADIATION
Matrices
Multiparameter light scattering for rapid virus identification, 12:12416 (BA;US)
LASER SPECTROSCOPY
Optical Pumping
Current research in optical pumping, 12:11954 (R;US)
LASER TARGETS
Population inversion and gain measurements for soft x-ray laser development in a magnetically confined plasma column. Final progress report, 1 November 1983-30 September 1985, 12:11952 (R;US)
Beam Profiles
Use of incoherence to produce smooth and controllable irradiation profiles with KrF fusion lasers. Memorandum report, 12:12940 (R;US)
Gain
Targets for laser and ion beam drivers, 12:12962 (R;US)
LASER WEAPONS
Efficiency
Thermal effects on a rotating missile. Master's thesis, 12:12217 (R;US)
LASER-PRODUCED PLASMA
Ion Beams
Control of ion-velocity distributions in laser-target interaction experiments. Memorandum report, 12:12941 (R;US)
Laser Targets
Use of incoherence to produce smooth and controllable irradiation profiles with KrF fusion lasers. Memorandum report, 12:12940 (R;US)
Mass Spectrometers
Some problems of data interpretation of time-of-flight mass spectrometry of laser plasma, 12:12926 (R;SU;In Russian)
Mathematical Models
Stationary, one-dimensional models for laser-produced plasmas, 12:12925 (R;FR;In German)

Short Wave Radiation
Application of laser saturation to the efficient generation of short-wavelength radiation from plasmas. Final report, 1 November 1984-31 October 1985, 12:12942 (R;US)

LASERS
Light Amplification by Stimulated Emission of Radiation.
See also CHEMICAL LASERS
FREE ELECTRON LASERS
GAS LASERS
SEMICONDUCTOR LASERS
SOLID STATE LASERS
X-RAY LASERS
Optical Pumping
Current research in optical pumping, 12:11954 (R;US)

LASL
Bibliographies
Publications of Los Alamos research, 1985, 12:11441 (R;US)
Leading Abstract
Los Alamos science, Number 14, 12:12971 (R;US)
Quality Assurance
Quality assurance for health and environmental chemistry, 1985, 12:11779 (R;US)
Safety Standards
X-ray safety at the Los Alamos National Laboratory, 12:12857 (R;US)
Water Supply
Water supply at Los Alamos during 1985: Progress report, 12:12338 (R;US)

LATENT HEAT STORAGE
Information
Application of latent heat stores, 12:11416 (R;SE;In Swedish)

LATTICE FIELD THEORY
Baryons
Baryons on the lattice: 3, Energy density, 12:12646 (R;US)
Baryons on the lattice: 2, Static potential, 12:12645 (R;US)
Langevin Equation
Generalized stochastic equations in field theory, 12:12671 (R;SU;In Russian)
Monte Carlo Method
Guided random walks for solving Hamiltonian lattice gauge theories, 12:12681 (J;US)

LATTICE PARAMETERS
Temperature Dependence
High temperature guinier x-ray diffractometry for thermal expansion measurements in the hexagonal form of cordierite (2MgO2Al3"O3#5SiO3"), 12:11702 (BA;US)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LAWRENCE BERKELEY LABORATORY
Bibliographies
Recent papers submitted and reports issued, 12:12972 (R;US)

LAWRENCE LIVERMORE LABORATORY
Modernizing LLNL [Lawrence Livermore National Laboratory]'s machine parts storage, retrieval, and inventory system, 12:11944 (R;US)
Electrical Engineering
Electronics Engineering Department: EE technical review, 12:11914 (R;US)
Mechanical Engineering
Technical abstracts for the period January-June 1986, 12:11913 (R;US)
Remedial Action
Remedial action plan for gasoline leak near Building 403, Lawrence Livermore National Laboratory, Livermore, California, 12:12331 (R;US)
Tanks
Leak tightness testing of underground tank systems, 12:12295 (R;US)
Water Pollution
Ground water investigation at Lawrence Livermore National Laboratory, Livermore, California: Volume two, Appendixes: Annual report for fiscal year 1985, 12:12329 (R;US)
Ground water investigation at Lawrence Livermore National Laboratory, Livermore, California: Volume one, Text: Annual report for fiscal year 1985, 12:12328 (R;US)

LEACHATES
Fluidized-Bed Combustion
Energy and chemical recovery by straw pulp manufacturing, 12:11569 (R;DK;In Danish)

LEAD
Acoustic Testing
Sound speed in liquid lead at high temperatures, 12:11649 (J;US)
Cross Sections
Electron spectroscopy, 12:11786 (RA;US)
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Electron Mobility
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
Energy Absorption
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
Health Hazards
Assessing the risks to young children of three effects associated with elevated blood-lead levels, 12:12518 (R;US)
Irradiation
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
Pion Minus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A $\rightarrow$ pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
Pion Plus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A $\rightarrow$ pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
Separation Processes
Facilitated transport from ternary cation mixtures through water-chloroform-water membrane systems containing macrocyclic ligands, 12:11807 (J;NL)
Wave Propagation
Sound speed in liquid lead at high temperatures, 12:11649 (J;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)

LEAD 202 TARGET
Deuteron Reactions
Study on 7.3 GeV deuteron interaction with the ^{93}Nb, ^{159}Tb, ^{202}Pb, sup(207,2)Pb and ^{209}Bi nuclei, 12:12720 (R;SU;In Russian)

LEAD 207 TARGET
Deuteron Reactions
Study on 7.3 GeV deuteron interaction with the ^{93}Nb, ^{159}Tb, ^{202}Pb, sup(207,2)Pb and ^{209}Bi nuclei, 12:12720 (R;SU;In Russian)

LEAD 208
Excited States
Two-phonon states in a sup(208)Pb nucleus, 12:12737 (RA;SU;In Russian)

LEAD 208 TARGET
Carbon 12 Reactions
Total reaction cross section for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb between 10 and 35 MeV/nucleon, 12:12707 (J;US)
Krypton 86 Reactions
[Studies of heavy-ion induced reactions]: Annual progress report, 12:12702 (R;US)
Pion Minus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
Pion Plus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)

Proton Reactions
318 and 800 MeV (p,xn) cross sections, 12:12742 (BA;US)
LEAD 210
Radioecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Radioecology
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
LEAD COMPOUNDS

LIQUID COLUMN CHROMATOGRAPHY
Instrumental and computational techniques for obtaining analytical data in high performance liquid chromatography, 12:11776 (R;US)
Efficiency
Performance of annular membrane and screen-tee reactors for postcolumn-reaction detection of metal ions separated by liquid chromatography, 12:11790 (J;US)
Performance
Performance of annular membrane and screen-tee reactors for postcolumn-reaction detection of metal ions separated by liquid chromatography, 12:11790 (J;US)

LIQUID CRYSTALS
Light Scattering
Circular intensity differential scattering measurements of planar and focal Conic orientations of cholesteric liquid crystals, 12:12874 (BA;US)
Optical Activity
Circular intensity differential scattering measurements of planar and focal Conic orientations of cholesteric liquid crystals, 12:12874 (BA;US)

LIQUID DROP MODEL
Fission Barrier
Observations on rotating finite-range fission barriers derived from barriers for nonrotating nuclei, 12:12826 (J;US)

LIQUID FUELS
See also FUEL OILS
KEROSENE
Contamination
Techniques to determine particulates in liquid fuels. Status report, 12:10877 (R;US)
Dynamics
Dynamics of liquid fuel droplets, 12:11902 (RA;US)

LIQUID METAL TEST FACILITIES
See TEST FACILITIES

LIQUID SCINTILLATION DETECTORS
Efficiency
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
Performance Testing
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)

LIQUID SCINTILLATORS
Performance
Simultaneous determination of americium and plutonium by liquid scintillation counting using a two-phase cocktail, 12:11791 (J;US)

LIQUIDS
See also COAL LIQUIDS
LIQUID CRYSTALS
Entrainment
Small break critical discharge: The roles of vapor and liquid entrainment in a stratified two-phase region upstream of the break, 12:11406 (R;US)
Thermal Conductivity
Prediction of liquid mixture thermal conductivities and shear viscosities, 12:11981 (RA;US)
Viscosity
Prediction of liquid mixture thermal conductivities and shear viscosities, 12:11981 (RA;US)

LITHIUM
Nuclear Reaction Analysis
Lithium traces determination in thermoplastic rubber, 12:11759 (RA;CS;In Czech)

LITHIUM 6 TARGET
Neutron Reactions
Helium production cross sections for 15-MeV neutrons on /sup 6/Li and /sup 7/Li, 12:12708 (J;US)
Photonuclear Reactions
On the nature of resonances in photonuclear reactions, 12:12815 (R;SU)
Precise tests for the unitarized pion photoproduction impulse amplitude in exclusive nuclear reactions, 12:12760 (R;US)
Pion Minus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A → pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
Pion Plus Reactions
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the π^{+-} A → pX reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
Triple-differential cross sections of the (π^{+}/,pp) reaction on lithium isotopes, 12:12701 (R;US)

LITHIUM 7 TARGET
Neutron Reactions
Helium production cross sections for 15-MeV neutrons on /sup 6/Li and /sup 7/Li, 12:12708 (J;US)
Parameters of resonances excited in the scattering on ^{7}Li, 12:12802 (RA;SU;In Russian)
Photonuclear Reactions
On the nature of resonances in photonuclear reactions, 12:12815 (R;SU)
Pion Plus Reactions
Triple-differential cross sections of the (π^{+}/,pp) reaction on lithium isotopes, 12:12701 (R;US)

LITHIUM 8
Excited States
Parameters of resonances excited in the scattering on ^{7}Li, 12:12802 (RA;SU;In Russian)

LITHIUM ALLOYS
Crystal Defects
Ordering of vacancies in LiAl, 12:11676 (J;GB)
Crystal Growth
Ordering of vacancies in LiAl, 12:11676 (J;GB)
Electric Conductivity
Electronic resistivity and defect structure of β-LiAl as a function of temperature and composition, 12:11681 (J;GB)

LITHIUM CHLORIDES
Quantitative Chemical Analysis
Determination of oxygen in molten alkali halide salts by proton activation analysis, 12:11792 (J;US)

LITHIUM COMPLEXES
Crystal Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Molecular Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)

LITHIUM FLUORIDES
Electron Mobility
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
Electronic Structure
Non-equivalence effects in cluster self-consistent calculations of ionic solids, 12:11727 (R;BR)
Energy Absorption
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
Irradiation
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:12842 (J;US)
Quantitative Chemical Analysis
Determination of oxygen in molten alkali halide salts by proton activation analysis, 12:11792 (J;US)

LITHIUM SULFATES
Thermodynamic Activity
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)

LITHIUM SULFIDES
Electrochemistry
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)
Structural Chemical Analysis
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)

Thermodynamic Properties
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)

Immunogenicity of methanococcaceae and monoclonal antibody survey of their antigenic markers and relationships, 12:12419 (J;US)
Molecular Biology
Immunogenicity of methanococcaceae and monoclonal antibody survey of their antigenic markers and relationships, 12:12419 (J;US)

METHANOL
Crystal Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Molecular Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Production
Liquid-phase methanol process promises cost saving, 12:11013 (J;US)
Solvent Properties
Entrainer effects in high pressure separation processes: Quarterly technical progress report for period September 15, 1986 to December 14, 1986, 12:11753 (R;US)
Synthesis
A study of catalysts and mechanisms in synthesis reactions: Progress report, 12:11809 (R;US)
Thermodynamic Properties
Integrated theoretical and experimental study of the thermophysical properties of fluid mixtures: Annual report, 12:11811 (R;US)
Yields
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Chemical Analysis
Detailed chemical analysis of fuel methanol for trace impurities. Interim report, January-August 1986, 12:11004 (R;US)

METHYL ALCOHOL
See METHANOL

METHYL ETHER
Yields
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)

METHYL IODIDE
Photolysis
Emission spectroscopy of photodissociating molecules: a collinear model for CH_3I and CD_3I, 12:11877 (J;US)

METHYL RADICALS
Combustion Kinetics
Studies of combustion kinetics and mechanisms: Progress report, June 1, 1984 to December 31, 1986, 12:11905 (R;US)

Oxidation
Studies of combustion kinetics and mechanisms: Progress report, June 1, 1984 to December 31, 1986, 12:11905 (R;US)
Synthesis
A study of catalysts and mechanisms in synthesis reactions: Progress report, 12:11809 (R;US)
METHYL VIOLOGEN

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Pressure Vessels
Static and dynamic analyses on the MFTF [Mirror Fusion Test Facility]-B Axicell Vacuum Vessel System: Final report, 12:12958 (R;US)
Superconducting Magnets
Construction and operation of the 12-T superconducting coils for the Mirror Fusion Test Facility, 12:12960 (R;US)
Predominance of the bronze-processed compound superconductors, 12:12943 (RA;US)
MHD GENERATOR CDIF
Coal-fired Component Development and Integration Facility at Butte, Montana.
Combustors
50 MW/sub t/ combustor performance characteristics, 12:11496 (BA;US)
Electric Currents
Three-dimensional MHD flow in the CDIF powertrain, 12:11499 (BA;US)
Evaluation
CDIF status report: Coal-fired MHD power generation tests, 12:11489 (BA;US)
Flow Models
Three-dimensional MHD flow in the CDIF powertrain, 12:11499 (BA;US)
Operation
Three-dimensional MHD flow in the CDIF powertrain, 12:11499 (BA;US)
Performance Testing
CDIF status report: Coal-fired MHD power generation tests, 12:11489 (BA;US)
MHD GENERATOR CFFF
Coal Fired Flow Facility for MHD generator component testing at Tullahoma, Tenn.
Furnaces
CFFF LMF radiant furnace modelling, 12:11491 (BA;US)
Heat Recovery
HRSR component testing at the CFFF during 1985, 12:11493 (BA;US)
Seed Recovery
HRSR component testing at the CFFF during 1985, 12:11493 (BA;US)
Test Facilities
HRSR component testing at the CFFF during 1985, 12:11493 (BA;US)
MHD GENERATORS
See also COAL-FIRED MHD GENERATORS
Bottoming Cycles
[Operation of MHD coal fired flow facility]: Quarterly technical progress report, January-March 1986, 12:11480 (R;US)
Combustion Products
Thermal radiation in MHD design applications, 12:11486 (BA;US)
Computerized Simulation
Advanced power train electrical stress simulation in the AVCO MK VI Test Facility, 12:11488 (BA;US)
Descaling
Recent ANL data on MHD fouling, 12:11494 (BA;US)
Design
Results from design analyses of an MHD generator for a prototype MHD power train suitable for retrofit of an existing steam power plant, 12:11485 (BA;US)
Thermal radiation in MHD design applications, 12:11486 (BA;US)
Diagnostic Techniques
Diagnostic development and support of MHD test facilities: Monthly progress report, November 1-30, 1986, 12:11482 (R;US)
Diagnostic development and support of MHD test facilities: Technical progress report for the period January, February, March 1985, 12:11481 (R;US)
Diagnostic development and support of MHD test facilities: Quarterly technical progress summary, 12:11483 (R;US)
Fouling
Recent ANL data on MHD fouling, 12:11494 (BA;US)
Heat Transfer
Recent ANL data on MHD fouling, 12:11494 (BA;US)
Mathematical Models
Data analysis of diagonally-connected magnetohydrodynamic power generator experiments, 12:11487 (BA;US)
Particles
A laser-based instrument for measurement of particle-size distributions, 12:11497 (BA;US)
Performance Testing
Data analysis of diagonally-connected magnetohydrodynamic power generator experiments, 12:11487 (BA;US)
Planning
Thermal radiation in MHD design applications, 12:11486 (BA;US)
Power Systems
Advanced power train electrical stress simulation in the AVCO MK VI Test Facility, 12:11488 (BA;US)
Retrofitting
Results from design analyses of an MHD generator for a prototype MHD power train suitable for retrofit of an existing steam power plant, 12:11485 (BA;US)
Superconducting Magnets
Develop and test an internally cooled, cabled superconductor (ICCS) for large scale MHD magnets: Analysis report, 12:11484 (R;US)

Test Facilities
Diagnostic development and support of MHD test facilities: Monthly progress report, November 1-30, 1986, 12:11482 (R;US)
Diagnostic development and support of MHD test facilities: Technical progress report for the period January, February, March 1985, 12:11481 (R;US)

MHD POWER PLANTS
Boilers
The effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 12:11492 (BA;US)
Steam Generation
Results from design analyses of an MHD generator for a prototype MHD power train suitable for retrofit of an existing steam power plant, 12:11485 (BA;US)

MICE
Migration Length
Movements by small mammals on a radioactive waste disposal area in southeastern Idaho (Dipodomys; Microtus; Perognathus; Peromyscus), 12:12311 (J;US)

MICELLAR SYSTEMS
Neutron Reactions
Small-angle neutron scattering from hexadecyltrimethylammonium bromide micelles in aqueous solutions, 12:11828 (J;US)
Small Angle Scattering
Small-angle neutron scattering from hexadecyltrimethylammonium bromide micelles in aqueous solutions, 12:11828 (J;US)

MICELLAR-POLYMER FLOODING

MIDDLE DISTILLATES
See PETROLEUM DISTILLATES

MIDDLE EAST
Emergency Plans
Middle Eastern strategic deployment - oasis or mirage. Master's thesis, August 1985-June 1986, 12:11590 (R;US)

MIDWEST REGION
See FEDERAL REGION VII

MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION

MILITARY EQUIPMENT
Research Programs
S. 2642: a bill to authorize appropriations for the Department of Energy for national security programs for fiscal year 1987, and for other purposes. Introduced in the Senate of the United States, Ninety-Ninth Congress, Second Session, July 15, 1986, 12:11444 (B;US)

MILITARY FACILITIES
Nuclear Explosions
Slam simulation base escape model using response surface methodology. Master's thesis, 12:12973 (R;US)
Radiation Hardening
Survivability of the hardened mobile launcher when attacked by a hypothetical rapidly retargetable ICBM system. Master's thesis, 12:12220 (R;US)
Vulnerability
Methodology for comparing a standoff weapon with current conventional munitions in a runway attack scenario. Master's thesis, 12:12974 (R;US)
Survivability of the hardened mobile launcher when attacked by a hypothetical rapidly retargetable ICBM system. Master's thesis, 12:12220 (R;US)
Waste Management
Field test of life-cycle cost analysis method for solvent management. Special report, 12:11437 (R;US)

MILITARY PERSONNEL
Beverages
Storage study of electrolyte beverage for NBC (nuclear, biological, or chemical) environment. Final technical report, April 1983-April 1985, 12:11917 (R;US)
Protective Clothing
Assessment of the effects of heat and NBC (nuclear, biological, and chemical) protective clothing on performance of critical military tasks. Final report, 12:11916 (R;US)
Vulnerability
Slam simulation base escape model using response surface methodology. Master's thesis, 12:12973 (R;US)

MILITARY STRATEGY
Constraints
Middle Eastern strategic deployment - oasis or mirage. Master's thesis, August 1985-June 1986, 12:11590 (R;US)
Emergency Plans
Middle Eastern strategic deployment - oasis or mirage. Master's thesis, August 1985-June 1986, 12:11590 (R;US)
MILK
Contamination
Concentrations of ^{131}I, ^{134}Cs, and ^{137}Cs in milk in the New York metropolitan area following the Chernobyl reactor accident, 12:12304 (RA;US)
Radiation Monitoring
Concentrations of ^{131}I, ^{134}Cs, and ^{137}Cs in milk in the New York metropolitan area following the Chernobyl reactor accident, 12:12304 (RA;US)
MILKY WAY
Background Radiation
Structure of the extended emission in the infrared celestial background, 12:12562 (R;US)
MILL TAILINGS
Remedial Action
Nuclear facility decommissioning and site remedial actions: A selected bibliography: Volume 7, 12:10946 (R;US)
MILLSTONE-3 REACTOR
Waterford, Connecticut, USA
Computerized Control Systems
Northeast Utilities signal validation applications for Millstone - 3 and Connecticut Yankee plants, 12:11342 (RA;US)
Reactor Safety
Northeast Utilities signal validation applications for Millstone - 3 and Connecticut Yankee plants, 12:11342 (RA;US)
MINE HAULAGE
Trucks
Truck management systems review, 12:10775 (R;CA)
MINE ROADWAYS
Hydraulic Mining
Survey of water jet roadway cutting, 12:10773 (R;GB)
Strata Control
Further development of support technology for service trunk roads and gate roads, 12:10782 (R;XE;In German)
Supports
Further development of support technology for service trunk roads and gate roads, 12:10782 (R;XE;In German)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERAL OIL
See LUBRICANTS
MINERAL WASTES
Ground Disposal
Hazardous waste on public lands, 12:12297 (J;US)
MINERALS
See also ZEOLITES
Geochemistry
Metamorphism, metasomatism and mineralization at Lagoa Real, Bahia, Brazil (Uranium deposits), 12:10900 (R;BR)
Petrogenesis
Metamorphism, metasomatism and mineralization at Lagoa Real, Bahia, Brazil (Uranium deposits), 12:10900 (R;BR)
MINING
See also COAL MINING
HYDRAULIC MINING
SURFACE MINING
UNDERGROUND MINING
Acoustic Monitoring
State-of-the-art of microseismic application for mining, 12:10776 (R;CA)
Cost Benefit Analysis
Superficial drainage studies in open-pit mines (Caldas uranium mine, Brazil), 12:10903 (R;BR;In Portuguese)
Noise Pollution
Development of the capacity to assess occupational noise overexposure in the mining industry. Open File report, 12:10837 (R;US)
MIRROR FUSION TEST FACILITY
See MFTF DEVICES
MIRRORS
Physical Radiation Effects
The application of angular resolved scatter to the documentation of damage to smooth mirrors, 12:11942 (R;US)
MISGURNUS
See FISHES
MISSILES
Launching
Survivability of the hardened mobile launcher when attacked by a hypothetical rapidly retargetable ICBM system. Master's thesis, 12:12220 (R;US)
Temperature Control
Thermal effects on a rotating missile. Master's thesis, 12:12217 (R;US)
MOCHOVCE-1 REACTOR
Primary Coolant Circuits
Diagnostics of primary coolant circuit equipment in nuclear power plants with WWER-440 type reactors in the CSSR, 12:11305 (RA;DD;In German)
MODELS (BIOLOGICAL)
See BIOLOGICAL MODELS
MODELS (FLOW)
See FLOW MODELS
MODELS (MATHEMATICAL)

MOESSBAUER SPECTROMETERS
Inelastic scattering in condensed matter with high intensity Moessbauer radiation: Progress report for period March 1, 1986-October 31, 1986, 12:12861 (R;US)
MOISTURE
Adsorption
Moisture absorption in graphite/organic-matrix composites, 12:11732 (R;US)
Diffusion
Moisture absorption in graphite/organic-matrix composites, 12:11732 (R;US)
MOLDAVITES
See TEKTITES
MOLECULAR BEAMS
Scattering
Quantum-resolved gas-surface scattering: NH_3 from Au (111), 12:12594 (R;US)
MOLECULAR ORBITAL MODEL
See MOLECULES
MOLECULES
Multi-Photon Processes
Multilevel relaxation phenomena and population trapping: [Progress report], July 1, 1984-June 30, 1987, 12:12588 (R;US)
Polarizability
Variational method for the calculation of dynamic polarizabilities and two-photon transition moments. The dressed molecule approach, 12:11881 (J;US)
Schroedinger Equation
Variational method for the calculation of dynamic polarizabilities and two-photon transition moments. The dressed molecule approach, 12:11881 (J;US)
Transition Amplitudes
Variational method for the calculation of dynamic polarizabilities and two-photon transition moments. The dressed molecule approach, 12:11881 (J;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Cathodes
Nickel transport in molten carbonate fuel cell electrolytes: Final report, 12:11504 (R;US)
Demonstration Programs
Work carried out on MCFC in Italy and planned activities, 12:11510 (RA;DE)

Hot Gas Cleanup
High temperature coal gas chloride cleanup for molten carbonate fuel cell applications: Final report, 12:11503 (R;US)
Marketing Research
Market and system studies for molten carbonate fuel cells, 12:11509 (RA;DE)
Performance
Molten carbonate fuel cell: Overview and technical problems, 12:11511 (RA;DE)
Research Programs
Work carried out on MCFC in Italy and planned activities, 12:11510 (RA;DE)

MOLTEN SALT COOLANTS
See MOLTEN SALTS

MOLTEN SALTS
Electrodes
Electrode studies in molten salts: Final report for the period June 1, 1984-May 31, 1986, 12:11868 (R;US)

MOLYBDENUM
Catalytic Effects
Catalysis, 12:11822 (RA;US)
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Deposition
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
Hardening
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Oxidation
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
Sorptive Properties
Surface composition-reactivity relationships in heterogeneous catalysis: Progress report, 12:11810 (R;US)
Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Structural Chemical Analysis
Surface chemistry of model Co-Mo catalysts supported on planar γ-Al_2O_3: Quarterly technical progress report for period September 1, 1986 to November 31, 1986, 12:11815 (R;US)
Sulfidation
Catalysis, 12:11822 (RA;US)
Superlattices
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Thermionic Emission
Study of the enhanced thermionic emission of molybdenum, hafnium and zirconium due to dispenser-cathode exposure. Final report, September 1982-September 1985, 12:11598 (R;US)

MOLYBDENUM ALLOYS
See also ALLOY-A-286
ALLOY-IN-100
HASTELLOYS
INCONEL 718
MOLYBDENUM BASE ALLOYS
STAINLESS STEEL-316
Atomization
Rapidly solidified prealloyed powders by laser spin atomization, 12:11672 (J;US)
Corrosion
Ordering behavior and corrosion properties of Ni-Mo and Ni-Mo-Cr alloys, 12:11668 (BA;US)
Hydridation
Evidence of FCC titanium hydride formation in β titanium alloy: An X-ray diffraction study, 12:11647 (J;US)
Order-Disorder Transformations
Ordering behavior and corrosion properties of Ni-Mo and Ni-Mo-Cr alloys, 12:11668 (BA;US)
Phase Transformations
Kinetics of the SRO-LRO transformation in NI4MO (Short Range Order-Long Range Order), 12:11658 (BA;US)
Resistivity of short-range and long-range order changes in Ni4Mo, 12:11659 (BA;US)

MOLYBDENUM BASE ALLOYS
Chemical Preparation
Hard metal composition, 12:11643 (P;US)
Hardness
Hard metal composition, 12:11643 (P;US)
Metallic Glasses
Superconductivity in rapidly quenched Mo-P-B alloys, 12:11680 (J;GB)
Superconductivity
Superconductivity in rapidly quenched Mo-P-B alloys, 12:11680 (J;GB)

MOLYBDENUM COMPLEXES
Infrared Spectra
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
NMR Spectra
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)

MOLYBDENUM COMPOUNDS
See also MOLYBDENUM SULFIDES
Molecular Structure
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Synthesis
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)

MOLYBDENUM SULFIDES
Catalytic Effects
Model catalytic systems: Reactions of small molecules (C_4H_9OH, NH_3,CO,H_2) on transition metal surfaces, 12:11817 (R;US)
Magnetic Susceptibility
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors. Ph.D. Thesis, 12:11618 (R;NL;In Dutch)
Magnetic susceptibility observation of removing oxygen from some chevrel compounds, 12:11739 (J;US)
Superconductivity
Investigation of three ferromagnetic superconductors in the milli-Kelvin area. Ph.D. Thesis, 12:11619 (R;NL;In Dutch)

MONITORING (RADIATION)

NATURAL GAS INDUSTRY
Air Pollution Control
Preparatory study of project "oxides of nitrogen and the combustion of natural gas", 12:12280 (TG;GB)

NATURAL GAS WELLS
Hydrogen Sulfides
Assessing and managing the risks of accidental releases of hazardous gas: a case study of natural gas wells contaminated with hydrogen sulfide, 12:12530 (J;GB)
Performance Testing
An evaluation of the effect of methane adsorption/desorption in well tests on coal beds: Final technical report, 12:10770 (R;US)
Pressure Measurement
An evaluation of the effect of methane adsorption/desorption in well tests on coal beds: Final technical report, 12:10770 (R;US)

NATURE RESERVES
Mathematical Models
Multimedia design principles applied to the development of the global baseline integrated monitoring network, 12:12262 (BA;US)

NAVIER-STOKES EQUATION
See NAVIER-STOKES EQUATIONS

NAVIER-STOKES EQUATIONS
Numerical Solution
A predictor-corrector method for calculation of incompressible fluid flow dynamics, 12:11992 (R;US)

NAVIGATION
Data Processing
Data compression techniques for use with the SITAN [Sandia Terrain-Aided Navigation] algorithm, 12:13001 (R;US)
Electronic Guidance
Data compression techniques for use with the SITAN [Sandia Terrain-Aided Navigation] algorithm, 12:13001 (R;US)

NEGATIVE IONS
See ANIONS

NEGATONS
See ELECTRONS

NEGATRONS
See ELECTRONS

NEODYMIUM LASERS
Accuracy
Precision cutting and drilling with the Nd-YAG laser, 12:11965 (R;US)
Efficiency
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
Laser Materials
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)

NEON
Ion-Atom Collisions
Recent studies of simultaneous ionization and charge transfer in helium ion-atom collisions, 12:12591 (R;US)
Thermal Diffusion
Noble gas-carbon dioxide thermal diffusion factors: anomalous behavior for Ar/$Co_2$1, 12:11740 (J;US)

NEON 20 REACTIONS
Fission
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)
Heavy Ion Fusion Reactions
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)

NEON 22
Hadronic Atoms
Antiprotonic atomic energy levels via the (p vector, p) reaction, 12:12604 (J;NL)

NEON IONS
Energy-Level Transitions
Extreme-ultraviolet beam-foil spectroscopy of highly ionized neon and argon. Doctoral thesis, 12:12583 (R;US)

NEOPLASMS
Epidemiology
Epidemiological studies of groups with occupational exposure to radiation, 12:12511 (R;XN)
Statistical analysis of health effects on workers at Hanford, 12:12515 (R;US)

Radioinduction
Epidemiological studies of groups with occupational exposure to radiation, 12:12511 (R;XN)

NEPTUNIUM
Resonance Ionization Mass Spectroscopy
Assessment of resonance ionization mass spectrometry for analytical chemistry and spectroscopy, 12:11898 (J;GB)

NEPTUNIUM 235
Alpha Decay
Intensity of the sup(235)Np α-decay, 12:12745 (RA;SU;In Russian)

NEPTUNIUM 237
Reaction Kinetics
Solid State Track Recorder fission rate measurements at high neutron fluence and high temperature, 12:11239 (R;US)

NEPTUNIUM 238
Excited States
Study on the characteristics of strongly deformed excited states of heavy nuclei by the shadow method, 12:12746 (RA;SU;In Russian)
Half-Life
Study on the characteristics of strongly deformed excited states of heavy nuclei by the shadow method, 12:12746 (RA;SU;In Russian)

NEPTUNIUM IONS
Chemical Reaction Kinetics
Rate Constants for Reactions of Radiation-Produced Transients in Aqueous Solutions of Actinides, 12:11886 (J;US)

NEPTUNIUM OXIDES
Adsorption
Interaction of $Np(V)O_2^+$ with common mineral surfaces in dilute aqueous solutions and seawater, 12:11899 (J;NL)

NERVE CELLS
Biological Radiation Effects
Effect of gamma radiation on sodium channels in different conformations in neuroblastoma cells, 12:12466 (R;US)
Computerized Simulation
Self-organization of neural networks, 12:13010 (J;NL)

NETHERLANDS
Acid Rain
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Air Pollution
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Energy Conservation
To an efficient and durable energy supply in the northern part of The Netherlands, 12:11435 (R;NL;DU)
Energy Models
Multiple objective modeling: experimental results with interactive methods in the Netherlands, 12:11429 (R;NL)
Energy Policy
Evaluation of the national wind energy development program NOW-2, phase 1, 12:11102 (R;NL;In Dutch)
Multiple objective energy modeling: experimental results with interactive methods in The Netherlands, 12:11431 (R;NL)
National wind energy development program 1981-1984. Inventory of executed projects and results, 12:11101 (R;NL;In Dutch)
Saving in costs in the electric power generating sector by introducing wind power, 12:11173 (R;NL;DU)
Energy Supplies
To an efficient and durable energy supply in the northern part of The Netherlands, 12:11435 (R;NL;DU)
Industry
Investment in saving energy costs. An investigation into the deliveries by the Dutch trade and industry, 12:11557 (R;NL;DU)
The outlook for industrial cogeneration in Western Europe (gas turbines in the early nineties), 12:11558 (R;NL)
Mathematical Models
Multiple objective energy modeling: experimental results with interactive methods in The Netherlands, 12:11431 (R;NL)
Natural Gas
Natural gas revenues in The Netherlands 1985-2000, 12:10886 (R;NL;DU)
Transfrontier Pollution
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Wind Power
Evaluation of the national wind energy development program NOW-2, phase 1, 12:11102 (R;NL;In Dutch)
National wind energy development program 1981-1984. Inventory of executed projects and results, 12:11101 (R;NL;In Dutch)

NETWORKS (COMPUTER)
See COMPUTER NETWORKS

NEURONS
See NERVE CELLS

NEUTRALIZATION (BEAM)
See BEAM NEUTRALIZATION

NEUTRALIZATION (CHEMICAL)
See PH VALUE

NEUTRINO REACTIONS
Structure Functions
Structure functions and quark distributions in nuclens and nuclei, 12:12819 (R;SU;In Russian)

NEUTRINO-DEUTERON INTERACTIONS
Quasi-Elastic Scattering
Comparison of quasielastic scattering nu/sub μ/N → μ^- P and Δ^{++} production reaction nu/sub μ/p → μ^- Δ^{++} in the BNL 7-foot deuterium bubble chamber, 12:12619 (R;US)

NEUTRINOS
See also ANTINEUTRINOS
Mass
Searches for heavy neutrino in beta-decay, 12:12633 (R;SU)
Pair Production
Neutrino counting at e^+e^- colliders and E_6 gauge theory, 12:12661 (J;US)

NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS

NEUTRON BEAMS
Polarization
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXV, 1 September 1985-31 August 1986, 12:12690 (R;US)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON DETECTORS
Foils
Resonance self-shielding in fast neutron spectra, 12:12853 (D;US)
Performance
On- and off-line tests of a neutron multiplicity meter, 12:12202 (RA;US)
Research Programs
On- and off-line tests of a neutron multiplicity meter, 12:12202 (RA;US)

NEUTRON DIFFRACTION
Performance
Use of time-of-flight neutron diffraction to study grain interaction stresses, 12:11678 (J;US)

NEUTRON LEAKAGE
Equations
Neutron multiplicity equation and its application for (n,2n) multiplication measurements by statistical correlation techniques, 12:12827 (J;US)

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON REACTIONS
A Codes
Uncertainty propagation from raw data to final results, 12:12830 (BA;US)
Analyzing Power
Coupled-channel analysis of nucleon scattering from /sup 40/Ca, 12:12710 (BA;US)
Breakup Reactions
Pauli principle effect on the behaviour of neutron-deuteron scattering near three-particle threshold, 12:12811 (R;SU;In Russian)

Calorimetry
A calorimetric measurement of the heat deposition in the vicinity of a spallation neutron target, 12:12852 (J;US)
Capture
Absolute measurements of the /sup 115/In(n,γ)/sup 116m1/In cross section for fast neutrons, 12:12725 (J;US)
Charge-Exchange Reactions
Isomeric levels in /sup 180/Lu and the nucleosynthesis of /sup 180/Ta/sup m/, 12:12735 (J;US)
Search for the beta decay of /sup 180/Lu to /sup 180/Hf/sup m/, 12:12734 (J;US)
Coupled Channel Theory
Coupled-channel analysis of nucleon scattering from /sup 40/Ca, 12:12710 (BA;US)
Cross Sections
Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru, 12:12711 (BA;US)
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)
Fission channel analysis for /sup 232/Th(n,f), 12:12750 (BA;US)
The Los Alamos National Laboratory neutron-neutron scattering program, 12:12694 (BA;US)
Uncertainty propagation from raw data to final results, 12:12830 (BA;US)
VITAMIN-E 174n, 38G general purpose cross-section library, 12:12855 (BA;US)
Data Analysis
Uncertainty propagation from raw data to final results, 12:12830 (BA;US)
Differential Cross Sections
Coupled-channel analysis of nucleon scattering from /sup 40/Ca, 12:12710 (BA;US)
Double differential cross sections of neutron emission from the ^{93}Nb(n,xn) reaction at the initial neutron energy of 20.1 MeV, 12:12716 (R;SU;In Russian)
Elastic Scattering
Measurements and calculations of neutron scattering in the actinide region, 12:12824 (J;US)
Study of the neutron-proton interaction in the 300 to 700 MeV energy region. Annual progress report (1985-1986), 12:12626 (R;US)
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXV, 1 September 1985-31 August 1986, 12:12690 (R;US)
Inelastic Scattering
Angular-distribution neutron-emission spectra of niobium following bombardment by fast neutrons, 12:12726 (BA;US)
Measurements and calculations of neutron scattering in the actinide region, 12:12824 (J;US)
The Los Alamos National Laboratory neutron-neutron scattering program, 12:12694 (BA;US)
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXV, 1 September 1985-31 August 1986, 12:12690 (R;US)
Integral Cross Sections
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
Nuclear Models
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)
Nuclear Reaction Kinetics
Study on the mechanism of low-energy neutron interaction with heavy nuclei, 12:12807 (R;SU;In Russian)
Research Programs
The Los Alamos National Laboratory neutron-neutron scattering program, 12:12694 (BA;US)
Resonance
Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr, 12:12728 (BA;US)
Neutron total cross section of /sup 240/Pu below 6 eV and the parameters of the 1.056-eV resonance, 12:12749 (BA;US)
Reviews
Nuclear physics program and experimental needs, 12:11313 (RA;US)
Scattering Lengths
The Los Alamos National Laboratory neutron-neutron scattering program, 12:12694 (BA;US)
Targets
A calorimetric measurement of the heat deposition in the vicinity of a spallation neutron target, 12:12852 (J;US)
Threshold Energy
Pauli principle effect on the behaviour of neutron-deuteron scattering near three-particle threshold, 12:12811 (R;SU;In Russian)
Total Cross Sections
Absolute measurements of the /sup 115/In(n,γ)/sup 116m1/In cross section for fast neutrons, 12:12725 (J;US)
Coupled-channel analysis of nucleon scattering from /sup 40/Ca, 12:12710 (BA;US)
Helium production cross sections for 15-MeV neutrons on /sup 6/Li and /sup 7/Li, 12:12708 (J;US)
Neutron total cross section of /sup 240/Pu below 6 eV and the parameters of the 1.056-eV resonance, 12:12749 (BA;US)
NEUTRON SLOWING-DOWN THEORY
Restoration of an approximate neutron pulse shape according to known temporal moments, 12:12837 (R;SU;In Russian)
NEUTRON SOURCE FACILITIES
Variation of neutron yield from a titanium-tritide target during deuterium beam bombardment, 12:12939 (R;AU)
Design
Accelerator based steady state neutron source, 12:12140 (RA;US)
Additional user needs, 12:11319 (RA;US)
Neutronics of SINQ, a continuous spallation neutron source, 12:12142 (RA;US)
Nuclear physics program and experimental needs, 12:11313 (RA;US)
Report on the working group on critique of source concepts, 12:11320 (RA;US)
Ultrahigh flux reactor design probing the limits of plate fuel technology, 12:11314 (RA;US)
Materials Testing
Neutron irradiation facilities for fission and fusion reactor materials studies, 12:11312 (RA;US)
Performance
Accelerator based steady state neutron source, 12:12140 (RA;US)
Neutronics of SINQ, a continuous spallation neutron source, 12:12142 (RA;US)
Report on the working group on critique of source concepts, 12:11320 (RA;US)
Reviews
Neutron scattering, 12:11311 (RA;US)
Uses
Additional user needs, 12:11319 (RA;US)
Report on the working group on critique of source concepts, 12:11320 (RA;US)
NEUTRON SPECTRA
Neutron Detectors
Resonance self-shielding in fast neutron spectra, 12:12853 (D;US)
NEUTRON TRANSPORT
A Codes
Uncertainty propagation from raw data to final results, 12:12830 (BA;US)
B Codes
Neutronic calculations for a new high flux reactor, 12:11242 (BA;US)
Reactor Physics
Neutronic calculations for a new high flux reactor, 12:11242 (BA;US)
Thermal Neutrons
Comparison of solutions of a nonstationary diffusion equation and the telegraph equation for the description of time variation of the thermal neutron density, 12:12838 (R;SU;In Russian)
NEUTRON TRANSPORT THEORY
Capture in the 1.15-keV iron resonance, 12:12854 (BA;US)
Neutron total cross section of /sup 240/Pu below 6 eV and the parameters of the 1.056-eV resonance, 12:12749 (BA;US)

Resonance self-shielding in fast neutron spectra, 12:12853 (D;US)
Uncertainty propagation from raw data to final results, 12:12830 (BA;US)
B Codes
Neutronic calculations for a new high flux reactor, 12:11242 (BA;US)
Calculation Methods
A combination of F/sub n/ and TP/sub n/ methods, 12:12851 (J;US)
Computer Codes
Evaluation of angular integrals in the generation of transfer matrices for multigroup transport codes, 12:11238 (R;BR;In Portuguese)
Mathematical Models
Generalization of neutron transport predictive models utilizing sensitivity theory and its implementation into a computer code, 12:12850 (J;US)
S Codes
Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr, 12:12728 (BA;US)
Generalization of neutron transport predictive models utilizing sensitivity theory and its implementation into a computer code, 12:12850 (J;US)
Sensitivity Analysis
Generalization of neutron transport predictive models utilizing sensitivity theory and its implementation into a computer code, 12:12850 (J;US)

NEUTRONS
See also COSMIC NEUTRONS
FAST NEUTRONS
FISSION NEUTRONS
THERMAL NEUTRONS
Inelastic Scattering
The Los Alamos National Laboratory neutron-neutron scattering program, 12:12694 (BA;US)
Kolmogorov Equation
Approximate solution to the Kolmogorov equation for a fission chain-reacting system, 12:12843 (J;US)
Nuclear Reaction Kinetics
Approximate solution to the Kolmogorov equation for a fission chain-reacting system, 12:12843 (J;US)
Scattering Lengths
The Los Alamos National Laboratory neutron-neutron scattering program, 12:12694 (BA;US)
Transmission
Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr, 12:12728 (BA;US)

NEVADA
Geology
Stratigraphic and volcano-tectonic relations of Crater Flat Tuff and some older volcanic units, Nye County, Nevada, 12:10957 (R;US)
Stratigraphy
Stratigraphic and volcano-tectonic relations of Crater Flat Tuff and some older volcanic units, Nye County, Nevada, 12:10957 (R;US)

NEVADA TEST SITE
Geology
Bibliography of reports by US Geological Survey personnel on studies at the Nevada Test Site and the Waste Isolation Pilot Plant Site, New Mexico, January 1, 1985 to December 31, 1985 (Reports by US GS), 12:10956 (R;US)
Ground Subsidence
Effects of surface collapse structures on infiltration and moisture redistribution, 12:12316 (R;US)
Mountains
Preliminary study of quaternary faulting on the east side of Bare Mountain, Nye County, Nevada, 12:12556 (R;US)
Radioactive Waste Management
Bibliography of reports by US Geological Survey personnel on studies at the Nevada Test Site and the Waste Isolation Pilot Plant Site, New Mexico, January 1, 1985 to December 31, 1985 (Reports by US GS), 12:10956 (R;US)

NEW ENGLAND
See FEDERAL REGION I

NEW MEXICO
Hydrology
Waste Isolation Pilot Plant: Annual hydrogeologic data report, 1985/1986, 12:10931 (R;US)
Oil Wells
The potential of enhanced oil recovery by carbon dioxide flooding in New Mexico: Final technical report, 12:10857 (R;US)

NEW ZEALAND
Energy Consumption
Energy use in transport: Data report, 12:11454 (R;NZ)

NEWTON MECHANICS
See CLASSICAL MECHANICS

NICKEL
Catalytic Effects
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Chemical Vapor Deposition
Mechanisms for the deposition of thin metallic films by laser driven gas phase reactions, 12:11816 (R;US)
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Electrochemical Corrosion
Surface analysis and electrochemical studies of sulfur enhanced corrosion of nickel, 12:11869 (R;US)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
Hardening
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Hot Pressing
Processing and microstructural characterization of TiB_2 liquid phase sintered with Ni and Ni_3Al, 12:11701 (J;US)
Ion Exchange Chromatography
Rotating annular chromatograph for continuous separations, 12:11801 (J;US)
Mass Transfer
Nickel transport in molten carbonate fuel cell electrolytes: Final report, 12:11504 (R;US)
Rotating Plasma
Steady state behavior of rotating plasmas in a vacuum-arc centrifuge, 12:12924 (R;BR)
Sintering
Processing and microstructural characterization of TiB_2 liquid phase sintered with Ni and Ni_3Al, 12:11701 (J;US)
Sorptive Properties
Surface diffusion of chemisorbed sulfur on nickel(111), 12:11855 (J;NL)
Steady-State Conditions
Steady state behavior of rotating plasmas in a vacuum-arc centrifuge, 12:12924 (R;BR)
Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Superlattices
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Surface Properties
Surface diffusion of chemisorbed sulfur on nickel(111), 12:11855 (J;NL)
Synchrotron radiation photoemission studies of CO chemisorption on Pt/Ta(110) and Ni/Ta(110), 12:11602 (R;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)

NICKEL 58 REACTIONS
Heavy Ion Fusion Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)

NICKEL 58 TARGET
Alpha Reactions
Breakup-fusion description of nonequilibrium protons from (α,p) reactions, 12:12834 (J;NL)
Neutron Reactions
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)
NICKEL 60 TARGET
Neutron Reactions
Calculated neutron-induced cross sections for /sup 63,65/Cu, /sup 58,60/Ni, and /sup 52/Cr from 1 to 20 MeV and comparisons with experiments, 12:12829 (BA;US)
Pion Minus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
Pion Plus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
NICKEL 64 REACTIONS
Heavy Ion Fusion Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
NICKEL ALLOYS
See also ALLOY-A-286
HASTELLOYS
NICKEL BASE ALLOYS
Anodization
Electrode studies in molten salts: Final report for the period June 1, 1984-May 31, 1986, 12:11868 (R;US)
Chemical Preparation
Hard metal composition, 12:11643 (P;US)
Corrosion
Ordering behavior and corrosion properties of Ni-Mo and Ni-Mo-Cr alloys, 12:11668 (BA;US)
Creep
Creep behavior of the ordered intermetallic (Fe,Ni)Al phase, 12:11663 (BA;US)
Hardness
Hard metal composition, 12:11643 (P;US)
Mechanical Properties
Effect of surface oxide films on the mechanical behavior of NiAl, 12:11662 (BA;US)
Property comparison of melt-spun ribbons and consolidated powders of Ni3Al-B, 12:11664 (BA;US)
Order-Disorder Transformations
Ordering behavior and corrosion properties of Ni-Mo and Ni-Mo-Cr alloys, 12:11668 (BA;US)
Oxidation
High temperature oxidation of beta-NiAl, 12:11667 (BA;US)
Phase Transformations
Kinetics of the SRO-LRO transformation in Ni4MO (Short Range Order-Long Range Order), 12:11658 (BA;US)
Resistivity of short-range and long-range order changes in Ni4Mo, 12:11659 (BA;US)
Research Programs
B2 aluminides as alternative materials, 12:11665 (BA;US)
NICKEL BASE ALLOYS
See also ALLOY-IN-100
Atomization
Rapidly solidified prealloyed powders by laser spin atomization, 12:11672 (J;US)
Creep
Creep in ordered nickel base alloys, 12:11660 (BA;US)
Oxidation
Mechanisms of the oxidation of metals and alloys: Annual progress report for the period 1 July 1985 to 30 June 1986, 12:11612 (R;US)
Research Programs
Ni-base intermetallics for high temperature alloy design, 12:11666 (BA;US)
Thermography
Evaluation of commercially available coating techniques for application of thermographic phosphor to nickel-based alloys, 12:11625 (R;US)
NICKEL CHLORIDES
Catalytic Effects
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
NICKEL COMPLEXES
Catalytic Effects
The study of some transition metals complexes as process catalysts: Quarterly report for the period September 30, 1986 through November 30, 1986, 12:10718 (R;US)
NICKEL COMPOUNDS
See also NICKEL CHLORIDES
Hot Pressing
Processing and microstructural characterization of TiB_2 liquid phase sintered with Ni and Ni_3Al, 12:11701 (J;US)
Sintering
Processing and microstructural characterization of TiB_2 liquid phase sintered with Ni and Ni_3Al, 12:11701 (J;US)
NICKEL IONS
Solvent Extraction
Interfacial chemistry in solvent extraction systems: Progress report for period April 1, 1986-March 31, 1987, 12:11751 (R;US)
NICKEL-CHROMIUM STEELS
Degassing
Ion-stimulated gas desorption from stainless steel and copper surfaces under high vacuum, 12:11623 (RA;SU;In Russian)
NICOTIANA
Productivity
Regulation of photosynthetic CO_2 assimilation and crop yield, 12:12393 (BA;US)
NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Microstructure
Microstructure of lead-magnesium niobate ceramics, 12:11691 (J;US)
NIOBIUM
Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Hardening
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Monocrystals
Direct observation of gliding dislocations interactions with defects in irradiated niobium single crystals by means of the high voltage electronic microscopy (HVEM), 12:12839 (R;BR;In Portuguese)
Physical Properties
Mass production of superconducting materials Nb and NbTi, 12:12089 (RA;US)
Production
Mass production of superconducting materials Nb and NbTi, 12:12089 (RA;US)
Radiation Effects
Direct observation of gliding dislocations interactions with defects in irradiated niobium single crystals by means of the high voltage electronic microscopy (HVEM), 12:12839 (R;BR;In Portuguese)
Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Superlattices
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Transmission Electron Microscopy
Direct observation of gliding dislocations interactions with defects in irradiated niobium single crystals by means of the high voltage electronic microscopy (HVEM), 12:12839 (R;BR;In Portuguese)

NIOBIUM 93 TARGET
Deuteron Reactions
Study on 7.3 GeV deuteron interaction with the ^{93}Nb, ^{159}Tb, ^{203}Pb, sup(207,2)Pb and ^{209}Bi nuclei, 12:12720 (R;SU;In Russian)
Neutron Reactions
Angular-distribution neutron-emission spectra of niobium following bombardment by fast neutrons, 12:12726 (BA;US)
Double differential cross sections of neutron emission from the ^{93}Nb(n,xn) reaction at the initial neutron energy of 20.1 MeV, 12:12716 (R;SU;In Russian)
NIOBIUM 95
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Observations of Chernobyl fallout in Germany by in situ gamma-ray spectrometry, 12:12302 (RA;US)
NIOBIUM ADDITIONS
Mechanical Properties
Role of niobium in a dual-phase steel, 12:11673 (J;GB)
NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 718
NIOBIUM ADDITIONS
NIOBIUM BASE ALLOYS
Current Density
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Fabrication
Development and manufacture of ultra-fine NbTi filament wires at ALSTHOM, 12:11923 (RA;US)
Development of cable for HERA dipoles at L.M.I., 12:12097 (RA;US)
Development of high field superconductors at BBC, 12:12105 (RA;US)
Development of bronze route Nb_3Sn superconductors for accelerator magnets, 12:12108 (RA;US)
Fabrication of new superconductors, 12:12102 (RA;US)
Fine filament NbTi superconductive composite, 12:12093 (RA;US)
Indigenous development of A-15 superconductors through in situ technique, 12:12103 (RA;US)
Large-scale production of HERA-superconductor, 12:12096 (RA;US)
Nb_3Al research and development at LMI and ENEA, 12:12107 (RA;US)
NbTi superconductors for accelerator magnets: large-scale production for HERA and development of fine filament conductors, 12:12099 (RA;US)
Niobium-titanium wire for the HERA correction coils, 12:12098 (RA;US)
Niobium-tin wire development according to the ECN powder method, 12:12106 (RA;US)
Predominance of the bronze-processed compound superconductors, 12:12943 (RA;US)
Present status of development of Nb_3Sn wires for high energy particle accelerators, 12:12101 (RA;US)
Recent developments of various superconducting cables for accelerators, 12:12094 (RA;US)
State of the art in fine filament NbTi superconductors at IGC, 12:12091 (RA;US)
Superconducting properties of fine filamentary superconducting wires, 12:12100 (RA;US)
Superconductor development and future trends, 12:12109 (RA;US)
Heat Treatments
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Microstructure
New developments in niobium-titanium superconductors, 12:12084 (RA;US)
Physical Properties
Mass production of superconducting materials Nb and NbTi, 12:12089 (RA;US)
Production
Mass production of superconducting materials Nb and NbTi, 12:12089 (RA;US)
Recent advances in the commercial scale production of Nb-46.5wt%Ti alloy, 12:12090 (RA;US)
Teledyne's historical contribution to developing superconductivity, 12:12088 (RA;US)
Superconductivity
Electrophysical and structural properties of multifilamentary superconducting niobium-titanium wire, 12:12087 (RA;US)
Survey of high field superconducting materials for accelerator magnets, 12:12085 (RA;US)
Technology Assessment
New developments in niobium-titanium superconductors, 12:12084 (RA;US)
NIOBIUM BASE ALLOYS
Creep
The effect of electron beam welding on the creep rupture properties of a Nb-Zr-C alloy (Nb-1Zr-0.1C (PWC-11)), 12:11615 (R;US)
Electron Beam Welding
The effect of electron beam welding on the creep rupture properties of a Nb-Zr-C alloy (Nb-1Zr-0.1C (PWC-11)), 12:11615 (R;US)
NITRIC OXIDE
NO.
Chemical Reaction Kinetics
Measured Hugoniot states of a two-element fluid, $O_2 + N_2$, near 2 Mg/m^3, 12:12219 (BA;NL)
Chemical Reactions
Gas phase reactions of ruthenium tetroxide with nitrogen oxides: Final report, 12:11754 (R;US)
NITRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Phase Diagrams
Extension of the Lifshitz-point concept to first-order phase transitions: Incommensurate $NaNO_2$ in a transverse electric field, 12:11733 (J;US)
NITRO COMPOUNDS
See also DINITROPHENOL
NITROMETHANE
Chemical Preparation
Thermodynamics of complexation of lanthanides by 3-fluoro-, 4-fluoro-, and 3-nitrobenzoic acids, 12:11837 (J;US)
NITROGEN
Activation Analysis
Activation of N, P, and A1 in patients and cadavers using radiation from the medical accelerator, 12:12404 (R;US)
Chemical Explosions
Measured Hugoniot states of a two-element fluid, $O_2 + N_2$, near 2 Mg/m^3, 12:12219 (BA;NL)
Corrosion
Effect of n-implantation on the corrosive-wear properties of surgical Ti-6Al-4V alloy, 12:11675 (J;US)
Desorption
Ion-stimulated gas desorption from stainless steel and copper surfaces under high vacuum, 12:11623 (RA;SU;In Russian)
Ion Implantation
Effect of n-implantation on the corrosive-wear properties of surgical Ti-6Al-4V alloy, 12:11675 (J;US)
Mass Spectroscopy
Pulsed plasma jet igniters: species measurements in nitrogen and air, 12:11908 (R;US)
Phase Studies
Integrated theoretical and experimental study of the thermophysical properties of fluid mixtures: Annual report, 12:11811 (R;US)
Radiosensitivity Effects
Study of the combined effects of nitrogen gas and gamma radiation on Tribolium Confusum, 12:12509 (RA;SY;In French and Arabic)
Wear Resistance
Effect of n-implantation on the corrosive-wear properties of surgical Ti-6Al-4V alloy, 12:11675 (J;US)

NITROGEN 14 TARGET
Photonuclear Reactions
Precise tests for the unitarized pion photoproduction impulse amplitude in exclusive nuclear reactions, 12:12760 (R;US)

NITROGEN DIOXIDE
NO_2.
Chemical Reactions
Gas phase reactions of ruthenium tetroxide with nitrogen oxides: Final report, 12:11754 (R;US)
Solvation
Thermochemistry of solvation of NO_3^- and $C_6H_5NO_2^-$ by polar molecules in the vapor phase. Comparison with Cl^- and variation with ligand structure, 12:11847 (J;US)

NITROGEN FIXATION
Bacteria
Hydrogen absorption by Azolla-Anabaena, 12:12365 (RA;BR;In Portuguese)
Biochemistry
Biochemical genetics of nitrogen fixation of Klebsiella pneumoniae, 12:12377 (BA;US)
Electron transfer chains of cyanobacterial heterocysts, 12:12387 (BA;US)
Genes used in Rhizobium-plant interactions, 12:12346 (BA;US)
Mechanism and structure of nitrogenase Fe-protein, 12:12379 (BA;US)
Plant hemoglobin properties, function, and genetic origin, 12:12376 (BA;US)
Biological Pathways
Hydrogen absorption by Azolla-Anabaena, 12:12365 (RA;BR;In Portuguese)
Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System, 12:12426 (RA;BR;In Portuguese)
Uninfected cells in ureide- and amide-exporting legume root nodules, 12:12375 (BA;US)
Cost
In vivo energetics of symbiotic nitrogen fixation, 12:12402 (BA;US)
Efficiency
Use of fertilizer nitrogen by wheat in semiarid region of the Pampa, Argentina, 12:12433 (RA;BR;In Spanish)
Genetics
Biochemical genetics of nitrogen fixation of Klebsiella pneumoniae, 12:12377 (BA;US)
Dinitrogen fixation in methylotrophic bacteria (Xanthobacter; Methylosinus), 12:12385 (BA;US)
Genes used in Rhizobium-plant interactions, 12:12346 (BA;US)
Molecular genetic analysis of nodulation genes of Rhizobium meliloti, 12:12359 (BA;US)
Organization of the genes for nitrogen fixation in cyanobacteria and photosynthetic bacteria, 12:12378 (BA;US)
Inhibition
Photoinhibition of N_2 fixation, photosynthesis, and the collapse of blue-green algal blooms, 12:12391 (BA;US)
Isotope Dilution
Evaluation of Non-N_2-fixing controls for the isotope dilution technique, 12:12366 (RA;BR;In Portuguese)
Plants
Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System, 12:12426 (RA;BR;In Portuguese)
Tracer Techniques
Evaluation of soil water and plant nitrogen status by nuclear techniques, 12:12438 (RA;BR)
Evaluation of soil water and plant nitrogen status by nuclear techniques, 12:12454 (RA;BR)

NITROGEN NITRIDES
See NITROGEN

NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
NITROUS OXIDE
EPA (Environmental Protection Agency) LIMB (Limestone Injection Multistage Burner) development and demonstration program status report (April 1985). Report for February 1985-June 1986, 12:11191 (R;US)
Air Pollution
Coal water mixture combustion technology development, 12:10802 (RA;US)
Low emission combustor technology, 12:10798 (RA;US)
Air Pollution Abatement
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Evaluation of alternate combustor concepts for gas turbine applications, 12:10807 (RA;US)
Premiums for low-sulfur coal, 12:11189 (RA;US)
Structure of fine-grained CWF flames: NO/sub x/ reduction by staged combustion, 12:10810 (RA;US)
Air Pollution Control
Combustion of low calorific gas, 12:10830 (R;FI;In Finnish)
Entrained coal combustor promises low emissions of nitrogen oxides, 12:10832 (J;US)
Flue-gas-cleanup research at Pittsburgh Energy Technology Center, 12:10763 (BA;US)
Preparatory study of project "oxides of nitrogen and the combustion of natural gas", 12:12280 (TG;GB)
Atmospheric Chemistry
Processes determining cloudwater composition: Inferences from field measurements, 12:12239 (R;US)
Deposition
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Environmental Policy
Consequences of environmental policy for private passenger transport, 12:11587 (R;NL;DU)
Environmental Transport
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Long-Range Transport
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Mass Spectroscopy
Pulsed plasma jet igniters: species measurements in nitrogen and air, 12:11908 (R;US)
Monitoring
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Removal
Direct sorbent injection for combined SO_2/NO/sub x/ removal: Quarterly technical progress report, July-September 1986, 12:10758 (R;US)
Spatial Distribution
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Washout
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)

NITROGENASE
Biochemistry
Forty-nine years on the trail of nitrogenase, 12:12347 (BA;US)
Enzyme Activity
Nitrogen fixation by Desulfovibrio gigas and other species of Desulfovibrio, 12:12383 (BA;US)
Nitrogen fixation in Rhodospirillum rubrum: the regulation of Fe protein and its activating enzyme, 12:12386 (BA;US)

NITROGENASES
See NITROGENASE

NITROMETHANE
Solvent Properties
Solvent selectivity studies using isomers of polystyrene, 12:11860 (J;NL)

NITROUS ACID
Chemical Preparation
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)
Electron Transfer
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)

NITROUS OXIDE
N_2O.

Biological Effects
Long-term inhalation reproductive and teratogenic toxicity evaluation of nitrous oxide plus halothane. Final report, 12:12525 (R;US)
Inhalation
Long-term inhalation reproductive and teratogenic toxicity evaluation of nitrous oxide plus halothane. Final report, 12:12525 (R;US)

Construction
Conference proceedings of session II. 16-18 April 1985, 12:11204 (R;DD)
Contribution for the determination of dependences between sub-assembly, hoisting device utilization and scheduling (presented for the main building of nuclear power plants with WWER-1000 type reactors), 12:11223 (RA;DD;In German)
Containment Buildings
Full-scale concrete containment wall tests results and implications, 12:11259 (RA;US)
Investigation of steel containment buckling from dynamic loads, 12:11258 (RA;US)
U.S.N.R.C. Containment Performance Research Program, 12:11256 (RA;US)
Containment Shells
Pressure testing of large scale torispherical heads subject to knuckle buckling, 12:11257 (RA;US)
Cranes
Contribution for the determination of dependences between sub-assembly, hoisting device utilization and scheduling (presented for the main building of nuclear power plants with WWER-1000 type reactors), 12:11223 (RA;DD;In German)
Data Acquisition Systems
Remote emergency data acquisition and control in a nuclear reactor facility, 12:11289 (RA;US)
Design
Dynamic fragility concepts for equipment design and qualification, 12:11254 (RA;US)
Latest results from the Seismic Category I Structures Program, 12:11251 (RA;US)
NRC Seismic Design Margins Program Plan, 12:11250 (RA;US)
Seismic fragility of reinforced concrete structures in nuclear facilities, 12:11255 (RA;US)
Status of structural and mechanical engineering research at the US Nuclear Regulatory Commission, 12:11248 (RA;US)
US Nuclear Regulatory Commission Seismic Safety Research Program, 12:11249 (RA;US)
Electric Cables
Transient fire environment cable damageability test results: Phase 1, 12:11261 (R;US)
Electrical Equipment
Component fragility and its application to equipment assemblies, 12:11382 (RA;US)
Seismic fragility results during EPRI's aging/seismic research, 12:11395 (RA;US)
Electronic Equipment
Impact on fragility level test by various types of multiaxis excitation, 12:11393 (RA;US)
Seismic fragility results during EPRI's aging/seismic research, 12:11395 (RA;US)
Fire Hazards
A methodology for analyzing the detection and suppression of fires in nuclear power plants, 12:11410 (J;US)
Human Factors
Application of SLIM-MAUD: A test of an interactive computer-based method for organizing expert assessment of human performance and reliability: Volume 2, Appendices, 12:11400 (R;US)
Mechanical Engineering
Status of structural and mechanical engineering research at the US Nuclear Regulatory Commission, 12:11248 (RA;US)
Meetings
Conference proceedings of session II. 16-18 April 1985, 12:11204 (R;DD)
Meltdown
Significance of the analytical forms of fragility curves, 12:11387 (RA;US)
Optimization
Contribution for the determination of dependences between sub-assembly, hoisting device utilization and scheduling (presented for the main building of nuclear power plants with WWER-1000 type reactors), 12:11223 (RA;DD;In German)
Personnel
Application of SLIM-MAUD: A test of an interactive computer-based method for organizing expert assessment of human performance and reliability: Volume 2, Appendices, 12:11400 (R;US)
Pipes
Investigation of ASME code: Section 3, Subsection NB, Suggested revisions: Final report, 12:11244 (R;US)

Reserve strength as a measure of fragility, 12:11381 (RA;US)
Pressure Vessels
Investigation of ASME code: Section 3, Subsection NB, Suggested revisions: Final report, 12:11244 (R;US)
Process Computers
Trends of information processing by means of process computers for reactor operators in the Federal Republic of Germany, 12:11306 (RA;DD;In German)
Reactor Accidents
Evaluation of empirical aerosol correlations: Final report, 12:11372 (R;US)
Trends of information processing by means of process computers for reactor operators in the Federal Republic of Germany, 12:11306 (RA;DD;In German)
Reactor Components
Assessment of ASME code Section 11 ultrasonic testing techniques: Final report, 12:11245 (R;US)
Comments on seismic fragility of nuclear power plant components, 12:11389 (RA;US)
Elements of fragility models, 12:11391 (RA;US)
Evaluation of equipment anchorage capacities, 12:11394 (RA;US)
Formulation of a fragility program, 12:11384 (RA;US)
Generic seismic qualification of equipment using existing test data, 12:11396 (RA;US)
Obtaining reliable quality data from fragility tests, 12:11392 (RA;US)
Safety capacity concepts for nuclear plant equipment qualification, 12:11390 (RA;US)
Significance of the analytical forms of fragility curves, 12:11387 (RA;US)
Will the real fragility please stand up?, 12:11385 (RA;US)
Reactor Control Systems
Advanced control concepts for fossil central stations with applications to nuclear power plants, 12:11278 (RA;US)
Design concept and strategy for control systems replacement in power plants, 12:11274 (RA;US)
Digital instrumentation for retrofit applications, 12:11275 (RA;US)
Honeywell experience in distributed control system design and implementation in fossil and nuclear plants, 12:11281 (RA;US)
Reactor Operation
Licensed operating reactors: Status summary report data as of 06-30-86, 12:11236 (R;US)
Reactor Safety
Aging system interaction studies: In-depth engineering studies of selected systems, 12:11331 (R;US)
Comments on seismic fragility of nuclear power plant components, 12:11389 (RA;US)
Component fragility and its application to equipment assemblies, 12:11382 (RA;US)
Effects of relay chatter in seismic probabilistic safety analysis, 12:11383 (RA;US)
Elements of fragility models, 12:11391 (RA;US)
Evaluation of equipment anchorage capacities, 12:11394 (RA;US)
Formulation of a fragility program, 12:11384 (RA;US)
Generic seismic qualification of equipment using existing test data, 12:11396 (RA;US)
Impact on fragility level test by various types of multiaxis excitation, 12:11393 (RA;US)
Obtaining reliable quality data from fragility tests, 12:11392 (RA;US)
Overview of relay and auxiliary component seismic fragility, 12:11398 (RA;US)
Reserve strength as a measure of fragility, 12:11381 (RA;US)
Safety capacity concepts for nuclear plant equipment qualification, 12:11390 (RA;US)
Significance of the analytical forms of fragility curves, 12:11387 (RA;US)
Relays
Effects of relay chatter in seismic probabilistic safety analysis, 12:11383 (RA;US)
Research Programs
Energy Research Advisory Board Civilian Nuclear Power Panel: Subpanel 2 report, Advanced reactor development: Volume 3, 12:11203 (R;US)
Risk Assessment
Equipment fragility testing, 12:11252 (RA;US)
Will the real fragility please stand up?, 12:11385 (RA;US)
Seismic Effects
Dynamic fragility concepts for equipment design and qualification, 12:11254 (RA;US)
Equipment fragility testing, 12:11252 (RA;US)
Latest results from the Seismic Category I Structures Program, 12:11251 (RA;US)
NRC Seismic Design Margins Program Plan, 12:11250 (RA;US)
Seismic fragility data for nuclear power plant equipment, 12:11253 (RA;US)
Seismic fragility of reinforced concrete structures in nuclear facilities, 12:11255 (RA;US)
Seismic soil structure interaction: analysis and centrifuge model studies, 12:11260 (RA;US)
US Nuclear Regulatory Commission Seismic Safety Research Program, 12:11249 (RA;US)
Soil-Structure Interactions
Seismic soil structure interaction: analysis and centrifuge model studies, 12:11260 (RA;US)
Steam Generators
Application of MVPACK to the design of multivariable control systems for a nuclear steam generator, 12:11297 (RA;US)
Microprocessor system for low power feedwater control, 12:11273 (RA;US)
Stress Analysis
Seismic soil structure interaction: analysis and centrifuge model studies, 12:11260 (RA;US)
Switching Circuits
Overview of relay and auxiliary component seismic fragility, 12:11398 (RA;US)
Systems Analysis
Evaluation of systems/equipment important to safety: Davis Besse, a perspective example, 12:11326 (R;US)
Water Pumps
Improved feedwater control through microprocessor based reactor feedpump turbine electro-hydraulic controls, 12:11290 (RA;US)

NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS

NUCLEAR REACTION ANALYSIS
Meetings
Conference on instrumental activation analysis IAA 86. Abstracts of papers, 12:11756 (R;CS;In Czech and Slovak)

NUCLEAR REACTIONS
See also FISSION
PHOTONUCLEAR REACTIONS
Research Programs
Theoretical nuclear physics group: Progress in research, November 1, 1985-October 31, 1986, 12:12761 (R;US)

NUCLEAR REACTORS
See REACTORS

NUCLEAR SAFETY
See RADIATION PROTECTION

NUCLEAR SPIN RESONANCE

ODD-ODD NUCLEI
Energy Levels
On the nature of the 2^+ states in nonmagic nuclei, 12:12774 (RA;SU;In Russian)
Light Scattering
Coherent scattering of light by nuclear spins. Final report, 12:12751 (R;US)
Nuclear Deformation
Static deformations and rotational excitations of baryons in the Skyrme model, 12:12832 (J;NL)
Spin
Coherent scattering of light by nuclear spins. Final report, 12:12751 (R;US)
Stochastic Processes
Stochastic dynamics of quadrupole oscillations of nuclei, 12:12777 (RA;SU;In Russian)
NUCLEOGENESIS
See NUCLEOSYNTHESIS
NUCLEON-ANTINUCLEON INTERACTIONS
See also PROTON-ANTIPROTON INTERACTIONS
Annihilation
Microscopic approaches to nucleon-antinucleon annihilation, 12:12643 (R;US)
NUCLEON-NUCLEON INTERACTIONS
Scattering
Partial wave analyses of hadron scattering below 2 GeV: Progress report, May 1, 1986-December 31, 1986, 12:12644 (R;US)
NUCLEON-NUCLEON POTENTIAL
Realistic nucleon-nucleon potential accounting for quark degrees of freedom, 12:12770 (RA;SU;In Russian)
NUCLEONS
See also NEUTRONS
PROTONS
Wave Functions
Analytical form of one-particle wave functions of a nucleon in nucleus potential with diffusion edge, 12:12792 (RA;SU;In Russian)
NUCLEOSOMES
Molecular Biology
[Impact of energy related pollutants on chromosome structure]: Progress report, 12:12344 (R;US)
NUCLEOSYNTHESIS
Nuclear Reaction Kinetics
Nuclear information needs for the astrophysical s-process, 12:12828 (BA;US)
Some nuclear data needs in astrophysics, 12:12575 (BA;US)
NUCLEOTIDES
Liquid Column Chromatography
Direct assays of radiation induced DNA base lesions in mammalian cells: Technical progress report, 12:12472 (R;US)
NUTRIENTS
Membrane Transport
Intersymbiotic transport processes in nitrogen-fixing root nodules, 12:12381 (BA;US)
Root Absorption
Nutrient uptake and growth responses of Virginia pine to elevated atmospheric carbon dioxide (Pisolithus tinctorius, Pinus virginiana Mill), 12:12528 (J;US)
NUTRITIONAL DEFICIENCY
Biological Effects
Nitrogen control of photosynthetic protein synthesis, 12:11026 (R;US)
NYLON
Radiation Doses
Effects of backing plates on the electron exposure of thin polymer films, 12:12205 (R;US)

OFFICE BUILDINGS
Air Conditioners
Impact of operation and control strategy on the performance of a thermal energy storage system, 12:11545 (BA;US)
Energy Consumption
Energy consumption for heating of buildings. Unit consumption for energy planning (Denmark), 12:11535 (R;DK;In Danish)
Evaporative Cooling
Evaporative cooling using thermal storage, 12:11077 (J;US)
Heat Storage
Evaporative cooling using thermal storage, 12:11077 (J;US)
Passive Solar Cooling Systems
Evaporative cooling using thermal storage, 12:11077 (J;US)
Space HVAC Systems
Evaporative cooling using thermal storage, 12:11077 (J;US)

OFFSHORE DRILLING
Environmental Impacts
Outer Continental Shelf environmental assesment program. Final reports of principal investigators. volume 37, 12:12321 (R;US)
Noise Pollution
Outer Continental Shelf environmental assesment program. Final reports of principal investigators. volume 37, 12:12321 (R;US)

OFFSHORE OPERATIONS
Field Production Equipment
Norwegian industry capacity and capability, 12:10849 (RA;NO)
Mathematical Models
Offshore production availability methods, 12:10859 (R;NO)
Meetings
Industry perspectives and challenges. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10848 (R;NO)
Well Recovery Equipment
Norwegian industry capacity and capability, 12:10849 (RA;NO)

OFFSHORE PLATFORMS
Includes gravity or fixed, floating, and towed platforms.
Construction
Evolution of the concrete structure, 12:11933 (RA;NO)
Design
Evolution of the concrete structure, 12:11933 (RA;NO)
Platform designs. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:11932 (R;NO)
Failure Mode Analysis
Development of applicable methods for evaluating the safety of offshore structures. Pt. 1 (The Beta-unzipping method), 12:11922 (R;DK)
Materials
Evolution of the concrete structure, 12:11933 (RA;NO)
Meetings
Platform designs. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:11932 (R;NO)
Risk Assessment
Development of applicable methods for evaluating the safety of offshore structures. Pt. 1 (The Beta-unzipping method), 12:11922 (R;DK)
Stress Analysis
Damping force exerted by a viscous medium upon an oscillating cylinder, 12:12016 (R;NL;In Dutch)

OIL BURNERS
Cost Benefit Analysis
Economic competitive power of alternative energy systems for farmsteads, 12:11570 (R;DK;In Danish)

OIL FIELDS
Field Production Equipment
North Sea production and pipeline systems. Overview of existing and future installations on the Norwegian Continental Shelf, 12:10858 (R;NO)
Resource Development
Major North Sea projects at different stages. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10845 (R;NO)
Oseberg field development parameters, 12:10846 (RA;NO)
Resource Management
Key elements is maximizing Statfjord field reservoir performance, 12:10844 (RA;NO)
Reservoir management. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10843 (R;NO)

OIL SAND DEPOSITS
Resource Assessment
Survey of tar sand deposits, heavy oil fields, and shallow light oil fields of the United States for underground coal gasification applications, 12:10769 (R;US)
OIL SAND OILS
See BITUMENS
OIL SANDS
Gas Injection
Three-dimensional laboratory simulation of the hot-gas injection process for tar sand, 12:10895 (R;US)
Quantitative Chemical Analysis
Isolation and FIMS analysis of saturated hydrocarbons from tar sand bitumens, 12:10896 (J;GB)
Steam Injection
Three-dimensional laboratory simulation of the hot-gas injection process for tar sand, 12:10895 (R;US)
OIL SHALE DEPOSITS
Fischer Assay
Establishment and maintenance of an oil shale sample bank: Technical progress report, October-November 1986 (Samples from eastern and western USA), 12:10894 (R;US)
Resource Assessment
Oil from shale: The potential, the problems, and a plan for development, 12:11467 (BA;US)
Sampling
Establishment and maintenance of an oil shale sample bank: Technical progress report, October-November 1986 (Samples from eastern and western USA), 12:10894 (R;US)
OIL SHALE PROCESSING PLANTS
Environmental Effects
Environmental chemistry of energy residuals. Final report, January 1, 1983-June 30, 1986, 12:10898 (R;US)
Information Needs
Extractors manual for Oil Shale Data Base System: Major Plants Data Base, 12:10890 (R;US)
OIL SHALE WASTE WATER
See OIL SHALES WASTE WATER
OIL SHALES
Information Systems
Extractors manual for Oil Shale Data Base System: Major Plants Data Base, 12:10890 (R;US)
Extractors manual for Oil Shale Data Base System: Test Data Data Base, 12:10891 (R;US)
Extractors manual for Oil Shale Data Base System: Math Modeling Data Base, 12:10893 (R;US)
Extractors manual for Oil Shale Data Base System: Resource Extraction Data Base, 12:10892 (R;US)
Retorting
Environmental chemistry of energy residuals. Final report, January 1, 1983-June 30, 1986, 12:10898 (R;US)
OIL SPILL FINGERPRINTING
See PATTERN RECOGNITION
OIL WELLS
Carbon Dioxide Injection
The potential of enhanced oil recovery by carbon dioxide flooding in New Mexico: Final technical report, 12:10857 (R;US)
Caustic Flooding
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Drilling
Tunnels for developing offshore fields, 12:10871 (RA;NO)
Evaluation
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Field Production Equipment
Subsea development applications offshore Norway, 12:10850 (RA;NO)
In-Situ Combustion
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Microbial EOR
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Microemulsion Flooding
A review and statistical analysis of micellar-polymer field test data: Topical report, 12:10852 (R;US)
Contribution to the study of biopolymer/non ionic surfactant interaction in view of its application to enhanced oil recovery, 12:11714 (R;FR;In French)
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Miscible-Phase Displacement
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Steam Injection
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
Underwater Operations
POSEIDON project, 12:10851 (RA;NO)
Waterflooding
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)
OLEFINS
See ALKENES
OLIVINE
Electric Conductivity
Point defects and the mechanisms of electrical conduction in olivine, 12:11744 (BA;US)
OLIVINES

ONAGAWA-1 REACTOR
Onagawa, Miyagi, Japan
Computerized Control Systems
Operating experience in using computering plant automatic start-up control system, 12:11269 (RA;US)
Reactor Start-Up
Operating experience in using computering plant automatic start-up control system, 12:11269 (RA;US)
ONIONS
Radurization
Preservation of onions (Allium cepa L.) using 60-cobalt gamma radiation, 12:12460 (RA;BR;In Portuguese)
ON-LINE COMPUTERS
See COMPUTERS
ON-LINE MEASUREMENT SYSTEMS
Radiochromatography
Computer evaluation of radiochromatograms, 12:11770 (RA;CS;In Czech)
OPERATION (REACTOR)
See REACTOR OPERATION
OPTICAL FILTERS
Optical Properties
Epitaxial semiconductor optical interference filters, 12:11731 (R;US)
OPTICAL PUMPING
Current research in optical pumping, 12:11954 (R;US)
OPTICAL RADAR
Airborne CO_2 dial (differential absorption lidar) measurement of atmospheric tracer gas concentration distributions, 12:12237 (R;US)
Development and demonstration of ALARM (airborne lidar agent remote monitor). Final report, 12:12238 (R;US)
ORBITAL SOLAR POWER PLANTS
Environmental Effects
Effects of chronic continuous wave microwave radiation (2.45 GHz) on the foraging behavior of the white-throated sparrow, 12:11064 (J;US)

ORDER-DISORDER TRANSFORMATIONS
Mathematical Models
Models of disordered media: some new results, including some new connections between composite-media, fluid-state, and random-flight theories, 12:12908 (BA;US)
ORE PROCESSING
Geothermal Process Heat
Geothermal enhancement of mineral processing in Nevada: Final report, April 25, 1985-June 30, 1986, 12:11096 (R;US)
ORGANIC ACIDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
Biosynthesis
Legume nodule carbon utilization in the synthesis of organic acids for the production of transport amides and amino acids (Medicago sativa L.), 12:12389 (BA;US)
Production
Biological production of fuels from coal derived gases: Quarterly report, September 20, 1986 to December 20, 1986, 12:10722 (R;US)
ORGANIC BROMINE COMPOUNDS
Crystal Structure
Infrared and Raman spectra of crystalline para-bromoaniline at low temperatures, 12:11866 (J;GB)
Fragmentation
Tandem quadrupole/time-of-flight instrument for mass spectrometry/mass spectrometry (Tetraethylammonium bromide), 12:11800 (J;US)
Mass Spectroscopy
Tandem quadrupole/time-of-flight instrument for mass spectrometry/mass spectrometry (Tetraethylammonium bromide), 12:11800 (J;US)
ORGANIC CHLORINE COMPOUNDS

PROTEINS
Sampling
Stationary source sampling report: Volatile organic compounds testing, 300-M area air stripper exhaust stack, 12:12242 (R;US)
Solvation
Thermochemistry of solvation of NO_2p and $C_6H_5NO_2^-$ by polar molecules in the vapor phase. Comparison with Cl^- and variation with ligand structure, 12:11847 (J;US)
Solvent Properties
Simultaneous determinatio.a of americium and plutonium by liquid scintillation counting using a two-phase cocktail, 12:11791 (J;US)
ORGANIC FLUORINE COMPOUNDS
See also FLUORINATED ALIPHATIC HYDROCARBONS
Chemical Preparation
Thermodynamics of complexation of lanthanides by 3-fluoro-, 4-fluoro-, and 3-nitrobenzoic acids, 12:11837 (J;US)
Solvent Properties
Solvent selectivity studies using isomers of polystyrene, 12:11860 (J;NL)
ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also AMIDES
HYDRAZONES
IMIDES
NITRO COMPOUNDS
PORPHYRINS
Chemical Preparation
Electrochemical, spectral, and base-binding studies of heterodinuclear ruthenium-iron complexes of meso-α,α,α,α-tetrakis(nicotinamidophenyl)porphine, 12:11841 (J;US)
Chemical Reactions
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)
Molecular Structure
Electrochemical, spectral, and base-binding studies of heterodinuclear ruthenium-iron complexes of meso-α,α,α,α-tetrakis(nicotinamidophenyl)porphine, 12:11841 (J;US)
Synthesis
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)
ORGANIC OXYGEN COMPOUNDS
Excluding HYDROXY COMPOUNDS, CARBONIC ACID DERIVATIVES, LIPIDS, STEROIDS, CARBOHYDRATES, ORGANIC ACIDS, ALDEHYDES, KETONES and ESTERS.
See also ALLOXAN
ETHERS
HETEROCYCLIC OXYGEN COMPOUNDS
QUINONES
RHODAMINES
Absorption Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
Chemical Preparation
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)
Electron Transfer
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)
Spectrophotometry
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
X-Ray Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
Chemical Reactions
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)
Crystal Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_2)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
Electron Transfer
Electron-transfer reactions of technetium complexes. 1. Rate of the self-exchange reaction of the Tc(I)/Tc(II) couple [Tc(DMPE)₃/sup +/2+/, where DMPE = 1,2-bis(dimethylphosphino)ethane, 12:11836 (J;US)
Molecular Structure
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_2)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
Nuclear Magnetic Resonance
Coal chemistry, 12:10751 (RA;US)
Synthesis
Bidentate and unidentate formato ligands in $Mo(CO)_2(PEt_3)_2(O_2CH)_2$, 12:11842 (J;US)
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)

ORGANIC SULFUR COMPOUNDS
See also PHENOTHIAZINES
SULFONATES
SULFOXIDES
THIONAPHTHENES
THIOPHENOLS
Absorption Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
Electron Attachment
Studies of negative ion formation in fluroethers and fluorosulfides using low-energy (≦10 eV) electron beam and electron swarm techniques, 12:11850 (J;US)
Electron Spin Resonance
Electron spin resonance study of organosulfur radicals produced in electron-irradiated aqueous solutions. Spin trapping with nitromethane aci-anion and 2-methyl-2-nitrosopropane, 12:11887 (J;US)
Radiolysis
Electron spin resonance study of organosulfur radicals produced in electron-irradiated aqueous solutions. Spin trapping with nitromethane aci-anion and 2-methyl-2-nitrosopropane, 12:11887 (J;US)
Spectrophotometry
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
X-Ray Spectroscopy
Spectrophotometric and X-ray absorption edge study of complexation of carbon monoxide with ferric tetrasulfophthalocyanine in alkaline solution, 12:11833 (J;US)
ORGANIC WASTES
See also AGRICULTURAL WASTES
Environmental Transport
Unified transport model for organics, 12:12264 (BA;US)
Mathematical Models
Unified transport model for organics, 12:12264 (BA;US)
ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Chemical Preparation
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of {ZrCHSi(Me)$_2$NSiMe$_3$[N(SiMe$_3$)$_2$]}$_2$, 12:11864 (J;US)
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)
Chemical Reactions
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula [(eta^5-C$_5$H$_5$)Re(NO)(PPh$_3$)]$^+$ X$^-$, 12:11839 (J;US)
Crystal Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, [WI(CH$_2$){P(CH$_3$)$_3$}$_4$][CF$_3$SO$_3$], 12:11862 (J;DK)
Dissolution
Anodic dissolution of iron phthalocyanine film electrodes, 12:11870 (J;US)
Electron Transfer
Electron-transfer reactions of technetium complexes. 1. Rate of the self-exchange reaction of the Tc(I)/Tc(II) couple [Tc(DMPE)$_3$/sup +/2+/, where DMPE = 1,2-bis(dimethylphosphino)ethane, 12:11836 (J;US)
Oxidative and electrophilic pathways in the reactions of pentaaquo(organo)chromium(2+) ions with nitrous acid, 12:11835 (J;US)
Molecular Structure
Bidentate and unidentate formato ligands in Mo(CO)$_2$(PEt$_3$)$_2$(O$_2$CH)$_2$, 12:11842 (J;US)
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, [WI(CH$_2$){P(CH$_3$)$_3$}$_4$][CF$_3$SO$_3$], 12:11862 (J;DK)
Photoelectron Spectroscopy
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding: Progress report for year ending February 28, 1987, 12:11814 (R;US)
Photoelectron spectra of metal tetrakis(methyltrihydroborates) and thorium tetrakis(tetrahydroborate), 12:11897 (J;US)
Pyrolysis
Materials chemistry, 12:11723 (RA;US)
Structural Chemical Analysis
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of {ZrCHSi(Me)$_2$NSiMe$_3$[N(SiMe$_3$)$_2$]}$_2$, 12:11864 (J;US)
Synthesis
Bidentate and unidentate formato ligands in Mo(CO)$_2$(PEt$_3$)$_2$(O$_2$CH)$_2$, 12:11842 (J;US)
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula [(eta^5-C$_5$H$_5$)Re(NO)(PPh$_3$)]$^+$ X$^-$, 12:11839 (J;US)
Thermodynamics
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding: Progress report for year ending February 28, 1987, 12:11814 (R;US)
ORNL
Research Programs
Chemistry Division annual progress report for period ending January 31, 1986, 12:11748 (R;US)
Waste Management
Renovation of dilute process wastewaters: Mini-pilot plant evaluation of an integrated process system to meet the Clean Water Act's heavy-metal and organic treatment requirements at Oak Ridge National Laboratory, 12:12343 (R;US)
ORYZA
See RICE
OSCILLATIONS (PLASMA)
See PLASMA WAVES
OSCILLATORS
Free Electron Lasers
Multimode dynamics in a free-electron laser with energy shift. Technical report, 1 October 1985-30 December 1986, 12:11949 (R;US)
OSMIUM COMPLEXES
Synthesis
Insertion of SnCl$_2$ into an Os-Os bond of Os$_3$(CO)$_{11}$(μ-CH$_2$) to give the planar cluster Os$_3$SnCl$_2$(CO)$_{11}$(μ-CH$_2$) with a pentacoordinate tin atom, 12:11838 (J;US)
OSMIUM COMPOUNDS
Reduction
Surface composition-reactivity relationships in heterogeneous catalysis: Progress report, 12:11810 (R;US)
OUTER CONTINENTAL SHELF

Catalytic Effects
A study of catalysts and mechanisms in synthesis reactions: Progress report, 12:11809 (R;US)

Chemical Reactions
Transition-metal cluster ions in the gas phase. Oxide chemistry of dimeric and trimeric clusters containing iron and cobalt, 12:11846 (J;US)

OXIDOREDUCTASES
Code number 1.
See also HYDROGENASES
OXYGENASES

Biochemical Reaction Kinetics
The mechanism of switching from an acidogenic to butanol-acetone fermentation by Clostridium acetobutylicum: Technical progress report, April 1986-December 1986, 12:11005 (R;US)

Biochemistry
Biochemistry of higher plant nitrate reductase, 12:12351 (BA;US)

Configuration Interaction
Association of ferredoxin-NADP$^+$ oxidoreductase with the chloroplast cytochrome b-f complex, 12:12409 (J;NL)

DNA Sequencing
Mechanisms of mutagenesis: Analysis through the use of alcohol dehydrogenase in Drosophila: Final report, 12:12520 (R;US)

Fractionation
The mechanism of switching from an acidogenic to butanol-acetone fermentation by Clostridium acetobutylicum: Technical progress report, April 1986-December 1986, 12:11005 (R;US)

Radioimmunoassay
Association of ferredoxin-NADP$^+$ oxidoreductase with the chloroplast cytochrome b-f complex, 12:12409 (J;NL)

OXOPROPANE
See ACETONE

OXYGEN

Adsorption
Role of surface processes in the gaseous hydrogen embrittlement of steels, 12:11683 (BA;US)

Chemical Explosions
Measured Hugoniot states of a two-element fluid, $O_2 + N_2$, near 2 Mg/m^3, 12:12219 (BA;NL)

Chemical Reaction Kinetics
Rate constant for the $O(^3P) + CH_4 \rightarrow OH + CH_3$ reaction obtained by the flash photolysis-shock tube technique over the temperature range 763 $\leqq T \leqq$ 1755 K, 12:11875 (J;US)
Reaction of T_2 and O_2 gas: a model, 12:11894 (J;US)

Diffusion
Group combustion of coal particles: Quarterly progress report, September 16, 1986 to December 15, 1986, 12:10826 (R;US)

Excited States
Rate constant for the $O(^3P) + CH_4 \rightarrow OH + CH_3$ reaction obtained by the flash photolysis-shock tube technique over the temperature range 763 $\leqq T \leqq$ 1755 K, 12:11875 (J;US)
Reaction of T_2 and O_2 gas: a model, 12:11894 (J;US)

Partial Pressure
Optrodes for in-vivo real time monitoring of /sub p/O/sub 2/ and /sub p/CO/sub 2/ in blood, 12:12429 (BA;US)
Point defects and the mechanisms of electrical conduction in olivine, 12:11744 (BA;US)

Photolysis
Rate constant for the $O(^3P) + CH_4 \rightarrow OH + CH_3$ reaction obtained by the flash photolysis-shock tube technique over the temperature range 763 $\leqq T \leqq$ 1755 K, 12:11875 (J;US)

Reduction
Anodic dissolution of iron phthalocyanine film electrodes, 12:11870 (J;US)

Removal
Magnetic susceptibility observation of removing oxygen from some chevrel compounds, 12:11739 (J;US)

OXYGEN 16

Charge Density
Transition densities of charge in sup(16,18)O and sup(32,34)S isotopes, 12:12704 (RA;SU;In Russian)

Energy-Level Transitions
M1 excitations in sup(16)O, 12:12703 (RA;SU;In Russian)

Excited States
M1 excitations in sup(16)O, 12:12703 (RA;SU;In Russian)

Isotope Ratio
Ground Water movement in crystalline rock aquifers (State of Ceara, Brazil), 12:12284 (R;BR;In Portuguese)
Salinization mechanisms in semi-arid regions. Study of the Pereira de Miranda and Caxitore dams, state of Ceara, Brazil, 12:12282 (R;BR;In Portuguese)

OXYGEN 16 TARGET

Photonuclear Reactions
On the allowance for continuous spectrum effects by J matrix method, 12:12782 (RA;SU;In Russian)

OXYGEN 18

Charge Density
Transition densities of charge in sup(16,18)O and sup(32,34)S isotopes, 12:12704 (RA;SU;In Russian)

Diffusion
Deformation and oxygen diffusion in Mn/sub 1-δ/O, 12:11686 (R;US)

Hadronic Atoms
Antiprotonic atomic energy levels via the (p vector, p) reaction, 12:12604 (J;NL)

Isotope Ratio
Ground Water movement in crystalline rock aquifers (State of Ceara, Brazil), 12:12284 (R;BR;In Portuguese)
Salinization mechanisms in semi-arid regions. Study of the Pereira de Miranda and Caxitore dams, state of Ceara, Brazil, 12:12282 (R;BR;In Portuguese)

PIXE Analysis
Determination of oxygen in molten alkali halide salts by proton activation analysis, 12:11792 (J;US)

OXYGEN 18 TARGET

Pion Reactions
Generalized hyperspheric function method and the pion scattering by nucleus of ^{18}O, 12:12813 (R;SU)

OXYGEN EFFECT (RADIOBIOLOGY)

Reactor Safety
Utility experience with BWR-PSMS, 12:11356 (RA;US)

OZONE

Atmospheric Chemistry
Processes determining cloudwater composition: Inferences from field measurements, 12:12239 (R;US)

Biological Effects
Effects of ozone and sulfur dioxide mixtures on forest vegetation of the southern Sierra Nevada. Final report, 12:12524 (R;US)

Toxicity
Overall and regional lung function in dogs exposed acutely to ozone, 12:12531 (J;US)

P

P CODES
Software description of the production of Lower-48 onshore oil and gas model, 12:10863 (R;US)
P WAVES (SEISMIC)
See SEISMIC P WAVES
PACIFIC OCEAN
Seismic Events
Core phases recorded by the RSTN, 12:12543 (RA;US)
PACKINGS
Leaks
An evaluation of 9 East's monolithic packing as a gob sealant, 12:10779 (R;CA)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PAINTS
Aerosols
Walk-through survey report of General Dynamics, Fort Worth, Texas, 12:12259 (R;US)
PAKHRA SYNCHROTRON
Orbit Stability
On the formation of an instantaneous orbit in a synchrotron, 12:12062 (RA;SU;In Russian)
PALLADIUM
Catalytic Effects
A study of catalysts and mechanisms in synthesis reactions: Progress report, 12:11809 (R;US)
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Infrared Spectra
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Phase Studies
Tritium in Pd and Pd /SUB 0.80/ Ag /SUB 0.20/ , 12:11654 (BA;US)
Sorptive Properties
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
X-Ray Fluorescence Analysis
The determination by x-ray fluorescence of platinum, palladium, ruthenium, iron, and chromium in special steels, 12:11780 (R;ZA)
PALLADIUM BASE ALLOYS
Phase Studies
Tritium in Pd and Pd /SUB 0.80/ Ag /SUB 0.20/ , 12:11654 (BA;US)
PALLADIUM COMPOUNDS

PARTICLE BEAMS
Beam Emittance
Accelerator research studies: Progress report, 12:12051 (R;US)
Beam Transport
Coherent oscillations of ribbon beams in periodical transport channels, 12:12151 (RA;SU;In Russian)
Instability
Accelerator research studies: Progress report, 12:12051 (R;US)
PARTICLE BOOSTERS
First stages of a multistage accelerator.
Beam Extraction
Computer simulation of relativistic electron slow extraction from a storage ring-stretcher with account of radiation effects, 12:12154 (RA;SU;In Russian)
Frequency Modulation
Low of formation of accelerating voltage frequency change in the IHEP ring booster injector, 12:12176 (RA;SU;In Russian)

Vacuum Systems
The vacuum system of the University of Washington Booster-Linac, 12:12146 (R;US)

PARTICLE SIZE
Computerized Simulation
Modeling particle size and initial temperature effects on shock initiation of TATB-based explosives, 12:12218 (BA;NL)

PARTICLE TRACKS
Convergence
Some remarks on convergence and stability in ray-tracing calculations, 12:12849 (J;US)
Finite Difference Method
Some remarks on convergence and stability in ray-tracing calculations, 12:12849 (J;US)
Stability
Some remarks on convergence and stability in ray-tracing calculations, 12:12849 (J;US)

PARTICLE-BEAM WEAPONS
See DIRECTED-ENERGY WEAPONS

PARTICLES
When appropriate use more specific terms listed under CHARGED PARTICLES, ELEMENTARY PARTICLES, and QUASI PARTICLES.
See also PARTICULATES
Distribution
A laser-based instrument for measurement of particle-size distributions, 12:11497 (BA;US)
Mass Transfer
Mass transfer to an from small particles in the sea, 12:12323 (J;US)
Measuring Methods
A laser-based instrument for measurement of particle-size distributions, 12:11497 (BA;US)
Particle Size
A laser-based instrument for measurement of particle-size distributions, 12:11497 (BA;US)
Sedimentation
Theory of sediment volumes of compressible, particulate structures, 12:11802 (J;US)

PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Air Pollution Abatement
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Air Pollution Control
Emission control equipment for residential coal-fire stove: Final project, 12:12245 (R;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 1, 12:11185 (R;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)
Combustion
Group combustion of coal particles: Quarterly progress report, September 16, 1986 to December 15, 1986, 12:10826 (R;US)
Control
Study of deposition control using transpiration, 12:10814 (RA;US)
Density
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report (Two-color laser transmissometer), 12:10707 (R;US)
Deposition
Study of deposition control using transpiration, 12:10814 (RA;US)
Indoor Air Pollution
Health-hazard evaluation report HETA 84-510-1691, Rockwell International, Rocky Flats Plant, Golden, Colorado, 12:12256 (R;US)
Measuring Instruments
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report (Two-color laser transmissometer), 12:10707 (R;US)
Techniques to determine particulates in liquid fuels. Status report (152 references), 12:10877 (R;US)
Measuring Methods
Techniques to determine particulates in liquid fuels. Status report (152 references), 12:10877 (R;US)
Monitoring
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report (Two-color laser transmissometer), 12:10707 (R;US)
Resolution of source contributions to environmental samples: Final technical report, 12:12293 (R;US)
Particle Size
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report (Two-color laser transmissometer), 12:10707 (R;US)
Performance
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report (Two-color laser transmissometer), 12:10707 (R;US)
Removal
Performance evaluation of a ceramic fabric bag filter on a bench-scale coal gasifier: Final report, 12:11180 (R;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 1, 12:11185 (R;US)
Scintillation Counting
Recovery of organic carbon from atmospheric particulate matter using soxhlet extraction with the benzene/methanol azeotrope, 12:12276 (J;US)
Solvent Extraction
Recovery of organic carbon from atmospheric particulate matter using soxhlet extraction with the benzene/methanol azeotrope, 12:12276 (J;US)

PASSIVATION
Mathematical Models
A percolation model for passivation in stainless steels, 12:11648 (J;US)

PEACH BOTTOM-1 REACTOR
York County, Pennsylvania, USA
Blackouts
Analysis of Peach Bottom station blackout with MELCOR, 12:11409 (R;US)

PEACH BOTTOM-2 REACTOR
York County, Pennsylvania, USA

Blackouts
Analysis of Peach Bottom station blackout with MELCOR, 12:11409 (R;US)
PEACH BOTTOM-3 REACTOR
York County, Pennsylvania, USA
Blackouts
Analysis of Peach Bottom station blackout with MELCOR, 12:11409 (R;US)
PEARL SPAR
See DOLOMITE
PEAT
Combustion
Coal products and their utilization, 12:10693 (R;FI;In Finnish)
Costs of district heating plants using wood and peat fuels, 12:10831 (R;FI;In Finnish)
Prices
Long term planning model for the Finnish energy supply system. Application 1: consequences of alternative peat price developments, 12:10836 (R;FI;In Finnish)
Research Programs
IEA Peat production and utilization project. Annual report, 1985, 12:11443 (R;SE)
Screening
Possibilities to utilize field screening for milled peat, 12:10784 (R;FI;In Finnish)
Sorting
Possibilities to utilize field screening for milled peat, 12:10784 (R;FI;In Finnish)
PELLET INJECTION
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor refueling: Technical progress report, 12:12947 (R;US)
PENTAMETHYLENEIMINES
See PIPERIDINES
PENTANE
Bubble Growth
Superheating and bubble growth within multicomponent fuel droplets, 12:11901 (RA;US)
Superheating
Superheating and bubble growth within multicomponent fuel droplets, 12:11901 (RA;US)
PEOPLE
See HUMAN POPULATIONS
PEPPERS
Fruit of Capsicum plant.
Radiation Induced Mutants
Research work to obtain pepper (Piper negrum l.) mutants resistant to Fusarium disease, 12:12481 (RA;BR;In Portuguese)
PERHYDROXYL RADICAL
See HYDROPEROXY RADICALS
PERMANENT MAGNETS
Rotors
Advanced high-power generator research program. Final report, January 1984-October 1985, 12:11918 (R;US)
PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.

Petroleum marketing annual, 1985: Volume 1, 12:10865 (R;US)
Petroleum marketing monthly, October 1986, 12:10862 (R;US)
P Codes
Software description of the production of Lower-48 onshore oil and gas model, 12:10863 (R;US)
Pour Point
Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)
Prices
A comparison study of the RAMSGAS Model and the National Energy Policy Plan projections to 2010, 12:11466 (R;US)
Analysis of seasonality in energy prices, 12:11433 (R;US)
Key stimuli for oil price fluctuations, 12:10868 (R;US)
The Research and Development Analysis Modeling System World Natural Gas Model (RAMSGAS): Final documentation, 12:11465 (R;US)
Production
A comparison study of the RAMSGAS Model and the National Energy Policy Plan projections to 2010, 12:11466 (R;US)
Monthly energy review, September 1986, 12:11463 (R;US)
Software description of the production of Lower-48 onshore oil and gas model, 12:10863 (R;US)
Quantitative Chemical Analysis
Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)
Reserves
Development prospects for North Norwegian waters. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10839 (R;NO)

Development possibilities in the Haltenbanken/Troms area, 12:10840 (RA;NO)
Stability
Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)
Structural Chemical Analysis
Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)
Supply and Demand
Fuel oil trends and implications for the crude oil market, 12:11161 (RA;US)
Transport
Transport technology. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10870 (R;NO)
Viscosity
Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)

PETROLEUM COKE
See COKE

PETROLEUM DEPOSITS
See also OIL FIELDS
Exploitation
High tech solutions for future North Sea exploration and exploitation challenges. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10841 (R;NO)
Exploration
High tech solutions for future North Sea exploration and exploitation challenges. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10841 (R;NO)
Resource Assessment
Survey of tar sand deposits, heavy oil fields, and shallow light oil fields of the United States for underground coal gasification applications, 12:10769 (R;US)
Resource Development
Development prospects for North Norwegian waters. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10839 (R;NO)
Development possibilities in the Haltenbanken/Troms area, 12:10840 (RA;NO)
Seismic Surveys
Geophysical applications for the future, 12:10842 (RA;NO)

PETROLEUM DISTILLATES
Boiling point range 0-600°C.

Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)
Viscosity
Detailed analysis of polar compounds in Wilmington gas oil and hydrotreated products: Topical report, 12:10876 (R;US)

PETROLEUM REFINERIES
Oil Spills
Trends in oil discharged with aqueous effluents from oil refineries in Western Europe; 1984 survey, 12:10869 (R;NL)
Waste Disposal
Trends in oil discharged with aqueous effluents from oil refineries in Western Europe; 1984 survey, 12:10869 (R;NL)
Waste Water
Trends in oil discharged with aqueous effluents from oil refineries in Western Europe; 1984 survey, 12:10869 (R;NL)

PETT
See POSITRON COMPUTED TOMOGRAPHY

PH VALUE
Isolation and characterization of new facultatively alkalophilic strains of Bacillus species, 12:12413 (J;US)

PHASEOLUS
Biological Radiation Effects
Effect of cobalt-60 gamma-ray irradiation on beans (Phaseolus vulgaris L.) of huasteco variety, 12:12475 (RA;BR;In Spanish)
Effect of cobalt-60 gamma-ray irradiation on beans (Phaseolus vulgaris L.) of huasteco variety, 12:12490 (RA;BR;In Spanish)
Genetic Radiation Effects
Evaluation of gamma radiation (60-Co) induced mutation in two Phaseolus vulgaris varieties, 12:12474 (RA;BR;In Spanish)
Evaluation of gamma radiation (60-Co) induced mutation in two Phaseolus vulgaris varieties, 12:12489 (RA;BR;In Spanish)
Nitrogen Fixation
Biological N_2 fixation and ^{15}N mineral absorption by bean (Phaseolus vulgaris L.) varieties, 12:12370 (RA;BR;In Portuguese)
Breeding for enhanced dinitrogen fixation potential of common bean (Phaseolus vulgaris L.), 12:12403 (BA;US)
Establishment and development of mycorrhizal infection and biological N_2 fixation in a bean crop with ^{15}N-mineral nitrogen, 12:12445 (RA;BR;In Portuguese)
Estimates of symbiotic nitrogen fixation in Phaseolus beans using the ^{15}N natural variation method, 12:12367 (RA;BR;In Portuguese)
Photosynthesis
Effects of water stress on the photosynthetic assimilation and distribution of ^{14}C-photosynthate in maize (Zea mays L.) and bean (Phaseolus vulgaris L.), 12:12424 (RA;BR;In Spanish)
Effects of water stress on the photosynthetic assimilation and distribution of ^{14}C-photosynthate in maize (Zea mays L.) and bean (Phaseolus vulgaris L.), 12:12364 (RA;BR;In Spanish)
Productivity
Breeding for enhanced dinitrogen fixation potential of common bean (Phaseolus vulgaris L.), 12:12403 (BA;US)
Effects of urea foliar application and of ammonium sulphate and urea applied to the soil on yield and N utilization by beans (Phaseolus vulgaris L.), 12:12437 (RA;BR;In Portuguese)

PHASOTRONS
See SYNCHROCYCLOTRONS

PHENANTHRENE
Mutagenesis
Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86, 12:12519 (R;US)
Structure-Activity Relationships
Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86, 12:12519 (R;US)

PHENOL
Deuteration
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, July 15-October 15, 1986, 12:10724 (R;US)

PHENOLS
See also DINITROPHENOL

PHENOL
XYLENOLS
Anaerobic Digestion
Anaerobic SBR [Sequencing Batch Reactor] treatment of coal conversion wastewaters: Fifth quarterly report, 12:10757 (R;US)
Catabolism
Anaerobic metabolism of aromatic compounds by phototrophic bacteria: Progress report, 12:11027 (R;US)
Reduction
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Solubility
Hydrophobic sorption of polar organics by low organic carbon soils, 12:12298 (J;NL)

PHENOTHIAZINES

PHI4-FIELD THEORY
Phase Diagrams
Metastability in Field Theory and Statistical Mechanics, 12:12674 (R;BR;In Portuguese)
Symmetry Breaking
Metastability in Field Theory and Statistical Mechanics, 12:12674 (R;BR;In Portuguese)

PHOSPHATES
For salts only; see also PHOSPHORIC ACID ESTERS.
Hydraulic Transport
Optimum wearing high efficiency design of phosphate slurry pumps, 12:10789 (BA;US)
Pelletizing
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)
Solvent Properties
Simultaneous determination of americium and plutonium by liquid scintillation counting using a two-phase cocktail, 12:11791 (J;US)
Waste Disposal
Environmental aspects of the utilization of pellets prepared from phosphogypsum, coal fly ash and cement, 12:10760 (R;NL)

PHOSPHORS
See also LIQUID SCINTILLATORS
Bonding
Evaluation of commercially available coating techniques for application of thermographic phosphor to nickel-based alloys, 12:11625 (R;US)

PHOSPHORUS
Activation Analysis
Activation of N, P, and A1 in patients and cadavers using radiation from the medical accelerator, 12:12404 (R;US)
Solubility
Phosphorus solubility in sludge-amended calcareous soils, 12:12296 (J;US)

PHOSPHORUS 31
Isotope Dilution
Isotopically exchangeable phosphorus. Critique revision, 12:12305 (RA;BR;In Spanish)
Isotopically exchangeable phosphorus. Critique revision, 12:12452 (RA;BR;In Spanish)

PHOSPHORUS 32
Foliar Uptake
Foliar absorption of phosphorus by common bean. Effect of sources, urea and sucrose, 12:12425 (RA;BR;In Portuguese)
Foliar absorption of phosphorus by common bean. Effect of sources, urea and sucrose, 12:12443 (RA;BR;In Portuguese)
Isotope Dilution
Isotopically exchangeable phosphorus. Critique revision, 12:12305 (RA;BR;In Spanish)
Isotopically exchangeable phosphorus. Critique revision, 12:12452 (RA;BR;In Spanish)

PHOSPHORUS COMPOUNDS
See also PHOSPHATES
PHOSPHORUS FLUORIDES
Metallic Glasses
Superconductivity in rapidly quenched Mo-P-B alloys, 12:11680 (J;GB)
Superconductivity
Superconductivity in rapidly quenched Mo-P-B alloys, 12:11680 (J;GB)

PHOSPHORUS FLUORIDES
Chemical Reactions
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)
Synthesis
Generation and reactions of chiral, pyramidal, transition-metal Lewis acids of the formula $[(eta^5\text{-}C_5H_5)Re(NO)(PPh_3)]^+ X^-$, 12:11839 (J;US)

PHOSPHORYLASES
See PHOSPHOTRANSFERASES

PHOSPHOTRANSFERASES

Vaporization Heat
Thermochemical and thermophysical properties of organic nitrogen compounds found in fossil materials: Status report, 12:11819 (R;US)
PIPES
Cracks
Evaluation of flawed-pipe experiments: Final report, 12:11208 (R;US)
Deformation
Bending stress and deflection of the cross section of buried pipes (Effects of soil weight and vehicle weight), 12:10888 (TG;GB)
Design
Bending stress and deflection of the cross section of buried pipes (Effects of soil weight and vehicle weight), 12:10888 (TG;GB)
Failures
Elastic-plastic finite element analysis of crack growth in large compact tension and circumferentially through-wall-cracked pipe specimen: Results of the first Battelle/NRC analysis round robin, 12:11635 (R;US)
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Fracture Mechanics
Evaluation of flawed-pipe experiments: Final report, 12:11208 (R;US)
Maintenance
Analytical techniques for selection of repair-or-replace options for cast-iron gas piping systems--Phase I. Topical report, March 1985-June 1986, 12:10887 (R;US)
Stresses
Bending stress and deflection of the cross section of buried pipes (Effects of soil weight and vehicle weight), 12:10888 (TG;GB)
Supports
Reserve strength as a measure of fragility, 12:11381 (RA;US)
Welding
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)
PISTONS
Lubrication
Measurement of oil film thickness on piston lands, 12:11580 (RA;US)
PISUM
Nitrogen Fixation
Host legume control of Rhizobium function, 12:12382 (BA;US)
PITTSBURGH ENERGY TECHNOLOGY CENTER
Research Programs
Flue-gas-cleanup research at Pittsburgh Energy Technology Center, 12:10763 (BA;US)
PLANETS
See also EARTH PLANET
Chemical Composition
Ammonia-water phase diagram and its implications for icy satellites, 12:11818 (R;US)
Nuclear Physics
Cosmic-ray-produced gamma rays in planetary surfaces, 12:12574 (BA;US)
PLANKTON
Biomass
Previous research of the Zooplankton in the area of influence of Nuclear Central Almirante Alvaro Alberto, in Angra dos Reis (Piraquara de Fora Bay) - RJ/Brazil, 12:12334 (R;BR;In Portuguese)
PLANT BREEDING
Genetic Variability
Breeding for enhanced dinitrogen fixation potential of common bean (Phaseolus vulgaris L.), 12:12403 (BA;US)
PLANT CELLS
Electrophysiology
Use of membrane vesicles as a simplified system for studying auxin transport of auxin: Progress report, 12:12423 (R;US)
PLANT CULTIVATION
See CULTIVATION TECHNIQUES
PLANTS
See also GRASS
LEGUMINOSAE
NICOTIANA
SHRUBS
TREES
Glycolysis
Pyrophosphate-dependent glycolysis and regulation by fructose 2,6-bisphosphate in plants, 12:12395 (BA;US)
Nitrogen Fixation
Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System, 12:12426 (RA;BR;In Portuguese)
Research Programs
Chemical Biodynamics Division: Annual report, October 1, 1985-September 30, 1986, 12:11872 (R;US)

Tritium
Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System, 12:12426 (RA;BR;In Portuguese)
Uptake
Hydrogen uptake by Azolla-Anabaena. Behaviour of dependent-ATP and uptake hydrogenase in the Azolla-Anabaena System, 12:12426 (RA;BR;In Portuguese)
PLANTS (INDUSTRIAL)
See INDUSTRIAL PLANTS
PLASMA
See also COLD PLASMA
COLLISIONLESS PLASMA
HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
RELATIVISTIC PLASMA
Compton Effect
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Electromagnetic Radiation
Nonlinear electromagnetic wave interaction in a plasma-molecular medium bounded by a spherical surface, 12:12927 (R;SU;In Russian)
Plasma Waves
Influence of damping in an electron gas on wake binding energies, 12:12614 (J;US)
Reviews
Magnetic fusion energy research: A summary of accomplishments, 12:12909 (R;US)
Transport Theory
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
PLASMA ACCELERATION
Laser Radiation
Experimental, theoretical and computational studies of the Plasma Beat Wave Accelerator: Progress report for the period 1 May 1983-30 April 1984, 12:12052 (R;US)
Research Programs
Experimental, theoretical and computational studies of the Plasma Beat Wave Accelerator: Progress report for the period 1 May 1983-30 April 1984, 12:12052 (R;US)
PLASMA ACCELERATORS
See PLASMA GUNS
PLASMA DIAGNOSTICS
Ion Beams
Advanced development of particle beam probe diagnostic systems: Technical progress report covering the period 10 December 1985-30 November 1986, 12:12913 (R;US)
Monochromators
Stigmatic high throughput monochromator for soft x rays, 12:12212 (J;US)
Photodetectors
Diagnostics of ultrasoft X radiation of a dense thermonuclear plasma by means of vacuum photoemission detectors, 12:12921 (R;SU;In Russian)
PLASMA DIODES
See THERMIONIC DIODES
PLASMA GUNS
Compact Torus plasma ring accelerator: a new type driver for inertial confinement fusion, 12:12959 (R;US)
Radiation Flux
Method for determining the high-energy photon spectrum of a pulsed plasma source. Master's thesis, 12:12608 (R;US)
PLASMA HEATING
Gyrotron: an application of the relativistic bunching of electrons to the generation of intense millimeter microwave radiation, 12:12935 (D;US)
PLASMA INSTABILITY
High-Frequency Heating
Rf effects on plasma stability: Final report, 12:12912 (R;US)
ICR Heating
Rf effects on plasma stability: Final report, 12:12912 (R;US)
Stabilization
Rf effects on plasma stability: Final report, 12:12912 (R;US)
PLASMA JETS
Ignition Systems
Pulsed plasma jet igniters: species measurements in nitrogen and air, 12:11908 (R;US)
Quantitative Chemical Analysis
Pulsed plasma jet igniters: species measurements in nitrogen and air, 12:11908 (R;US)
PLASMA OSCILLATIONS
See PLASMA WAVES
PLASMA (QUARK)
See QUARK MATTER
PLASMA RINGS
Acceleration
Compact Torus plasma ring accelerator: a new type driver for inertial confinement fusion, 12:12959 (R;US)
PLASMA SWITCHES
Operation
Vacuum pulse conditioning and risetime sharpening on a low nu/gamma multi-MEV electron beam accelerator, 12:12168 (BA;US)
PLASMA WAVES
Electron Cyclotron-Resonance
Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency, 12:12923 (R;BR)
Finite Element Method
Finite elements applied to plasma waves, 12:12929 (R;CH)
Frequency Range
Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency, 12:12923 (R;BR)
Inhomogeneous Plasma
Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency, 12:12923 (R;BR)
Tokamak Devices
Graphical study of electromagnetic wave accessibility in tokamak plasmas near the electron-cyclotron frequency, 12:12923 (R;BR)
PLASTIC FOAMS
Fire Resistance
Insulation materials for buildings, with good fire resistance, based on novolaque type phenolic resins in the form of reinforced foams, 12:11520 (R;FR;In French)
Thermal Conductivity
Improvement of functional thermal conductivity of polyurethane foams, 12:11713 (R;FR;In French)
PLATES
Thicker than SHEETS or FOILS.
Deformation
Dynamic plastic deformation of an infinite plate, 12:11924 (RA;US)
PLATINUM
Adsorption
A molecular surface science study of the structure of adsorbates on surfaces: Importance to lubrication, 12:12868 (R;US)
Monocrystals
Electron energy loss and thermal desorption spectroscopy of pyridine adsorbed on Pt(111), 12:11829 (J;US)
Oxidation
AES and TDS studies of electrochemically oxidized Pt(100), 12:11670 (J;NL)
LEED spot profile analysis of the structure of electrochemically treated Pt(100) and Pt(111) surfaces, 12:11671 (J;NL)
Photoelectron Spectroscopy
Characterization of a titanium-promoted supported platinum electrocatalyst, 12:11796 (J;US)
Reduction
LEED spot profile analysis of the structure of electrochemically treated Pt(100) and Pt(111) surfaces, 12:11671 (J;NL)
Sorptive Properties
Analysis of products from reactions of chemisorbed monolayers at smooth platinum electrodes: electrochemical hydrodesulfurization of thiophenol derivatives, 12:11793 (J;US)
Electron energy loss and thermal desorption spectroscopy of pyridine adsorbed on Pt(111), 12:11829 (J;US)

Surface Properties
AES and TDS studies of electrochemically oxidized Pt(100), 12:11670 (J;NL)
Bonding and reactivity of unsaturated hydrocarbons on transition metal surfaces: Spectroscopic and kinetic studies of platinum and rhodium single crystal surfaces, 12:11632 (R;US)
LEED spot profile analysis of the structure of electrochemically treated Pt(100) and Pt(111) surfaces, 12:11671 (J;NL)
Synchrotron radiation photoemission studies of CO chemisorption on Pt/Ta(110) and Ni/Ta(110), 12:11602 (R;US)
X-Ray Diffraction
Characterization of a titanium-promoted supported platinum electrocatalyst, 12:11796 (J;US)
X-Ray Fluorescence Analysis
The determination by x-ray fluorescence of platinum, palladium, ruthenium, iron, and chromium in special steels, 12:11780 (R;ZA)

PLATINUM 196
De-Excitation
Determination of relative probability of K capture on the 688.7 keV level in sup(196)Pt, 12:12740 (RA;SU;In Russian)

PLATINUM COMPLEXES
Chemical Preparation
Strongly luminescing ruthenium(II)/ruthenium(II) and ruthenium(II)/platinum(II) binuclear complexes, 12:11057 (J;US)
Electron Transfer
Strongly luminescing ruthenium(II)/ruthenium(II) and ruthenium(II)/platinum(II) binuclear complexes, 12:11057 (J;US)

PLATINUM COMPOUNDS
Reduction
Surface composition-reactivity relationships in heterogeneous catalysis: Progress report, 12:11810 (R;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLT DEVICES
Transport Theory
Analysis of neutral beam driven impurity flow reversal in PLT, 12:12918 (R;US)

PLUMES
Diffusion
Model simulation of plume dispersion in a narrow valley after sunrise, 12:12260 (R;US)
Perfluorocarbon tracer technology, 12:12240 (R;US)
Opacity
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 1, 12:11185 (R;US)

PLUTONIUM
Neutron Transport
Neutron total cross section of /sup 240/Pu below 6 eV and the parameters of the 1.056-eV resonance, 12:12749 (BA;US)
Resonance Ionization Mass Spectroscopy
Assessment of resonance ionization mass spectrometry for analytical chemistry and spectroscopy, 12:11898 (J;GB)

PLUTONIUM 238
Oxidation
Simultaneous determination of americium and plutonium by liquid scintillation counting using a two-phase cocktail, 12:11791 (J;US)
Scintillation Counting
Simultaneous determination of americium and plutonium by liquid scintillation counting using a two-phase cocktail, 12:11791 (J;US)
Solvent Extraction
Simultaneous determination of americium and plutonium by liquid scintillation counting using a two-phase cocktail, 12:11791 (J;US)

PLUTONIUM 239
Radioecology
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Reaction Kinetics
Solid State Track Recorder fission rate measurements at high neutron fluence and high temperature, 12:11239 (R;US)

PLUTONIUM 239 TARGET
Neutron Reactions
Measurements and calculations of neutron scattering in the actinide region, 12:12824 (J;US)

PLUTONIUM 240 TARGET
Neutron Reactions
Neutron total cross section of /sup 240/Pu below 6 eV and the parameters of the 1.056-eV resonance, 12:12749 (BA;US)

PLUTONIUM DIOXIDE
Diffusion
Cation interdiffusion in the UO_2-(U, Pu)O_2 and UO_2 - PuO_2 systems, 12:10911 (R;BR;In Portuguese)
Multiplication Factors
Calculation of fast-neutron induced-fission multiplication in large PuO_2 samples, 12:10985 (R;US)

PLUTONIUM IONS
Chemical Reaction Kinetics
Rate Constants for Reactions of Radiation-Produced Transients in Aqueous Solutions of Actinides, 12:11886 (J;US)

PMMA
Chemical Radiation Effects
Sensitivity of polymer blends to synchrotron radiation. Technical note, 12:11706 (R;US)
Radiosensitivity
Sensitivity of polymer blends to synchrotron radiation. Technical note, 12:11706 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNICTIDES
Crystal Structure
Chemistry of transuranium elements and compounds, 12:11892 (RA;US)

POINT MUTATIONS
See GENE MUTATIONS

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLAR REGIONS
Ionosphere
Comparison of simultaneous Chatanika and Millstone Hill observations with ionospheric model predictions, 12:12580 (R;US)

POLARIMETERS
Calibration
Multiparameter light scattering for rapid virus identification, 12:12416 (BA;US)

POLARIZED BEAMS
Radiation Doses
Muon calculations for the polarized proton beamline, 12:12148 (R;US)

POLICY
See ENERGY POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
DK-EMEP bulletin 1978-1982. A five-year overview of rural air pollution in Denmark, 12:12249 (R;DK)
Environmental Exposure Pathway
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Overview of the remedial action priority system (RAPS), 12:11439 (BA;US)
Environmental Transport
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Multimedia design principles applied to the development of the global baseline integrated monitoring network, 12:12262 (BA;US)
Overview of the remedial action priority system (RAPS), 12:11439 (BA;US)
Unified transport model for organics, 12:12264 (BA;US)
Mathematical Models
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)

Unified transport model for organics, 12:12264 (BA;US)
Monitoring
Multimedia design principles applied to the development of the global baseline integrated monitoring network, 12:12262 (BA;US)
Risk Assessment
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Overview of the remedial action priority system (RAPS), 12:11439 (BA;US)
POLLUTION CONTROL EQUIPMENT
See also ELECTROSTATIC PRECIPITATORS
SCRUBBERS
Design
Design and operation of air pollution control equipment for cycling units, 12:11140 (RA;US)
Economic Analysis
Diversity of utility scrub-switch decision factors, 12:11188 (RA;US)
Operation
Design and operation of air pollution control equipment for cycling units, 12:11140 (RA;US)
Performance
Plant cycling effects on environmental control equipment, 12:11125 (RA;US)
POLOIDAL DIVERTORS
See POLOIDAL FIELD DIVERTORS
POLOIDAL FIELD DIVERTORS
Magnetic Field Configurations
Equilibrium studies of a poloidal divertor pinch with a reversed-toroidal field, 12:12950 (R;US)
Stochastic Processes
Stochasticity about a poloidal divertor separatrix, 12:12949 (R;US)
POLYAMIDES

POLYURETHANES
Friction Factor
Prediction of friction and heat transfer for viscoelastic fluids in turbulent pipe flow, 12:11994 (J;US)
Heat Transfer
Prediction of friction and heat transfer for viscoelastic fluids in turbulent pipe flow, 12:11994 (J;US)
Turbulent Flow
Prediction of friction and heat transfer for viscoelastic fluids in turbulent pipe flow, 12:11994 (J;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Ecological Concentration
PCB [polychlorinated biphenyls] concentrations in Wilson Reservoir catfish, 1985, 12:12327 (R;US)
Environmental Transport
Environmental chemistry of energy residuals. Final report, January 1, 1983-June 30, 1986, 12:10898 (R;US)
Gas Chromatography
Isolation and identification of mutagenic polycyclic aromatic hydrocarbons from a coal gasifier condensate, 12:10753 (J;US)
Ionization
Differentiation of polycyclic aromatic hydrocarbons using electron capture negative chemical ionization, 12:11852 (J;GB)
Isomers
Differentiation of polycyclic aromatic hydrocarbons using electron capture negative chemical ionization, 12:11852 (J;GB)
Mass Spectroscopy
Differentiation of polycyclic aromatic hydrocarbons using electron capture negative chemical ionization, 12:11852 (J;GB)
Isolation and identification of mutagenic polycyclic aromatic hydrocarbons from a coal gasifier condensate, 12:10753 (J;US)
Mutagenesis
Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86, 12:12519 (R;US)
Solubility
Hydrophobic sorption of polar organics by low organic carbon soils, 12:12298 (J;NL)
Structure-Activity Relationships
Methylated polynuclear aromatic hydrocarbons: Structural requirements for mutagenic and tumorigenic activity: Final progress report, 9-1-82 to 10-31-86, 12:12519 (R;US)
POLYETHERS

POWER SUBSTATIONS
Term is used for an assembly of equipment in an electric power system for the transmission, transformation, or switching of electric energy.
Feasibility Studies
HVDC converter stations for voltages above 600 kV: R and D needs and priorities: Final report, 12:11199 (R;US)
Information Needs
HVDC converter stations for voltages above 600 kV: R and D needs and priorities: Final report, 12:11199 (R;US)
Radio Noise
Radio interference from HVDC converter stations: Modeling and characterization: Final report, 12:11198 (R;US)
POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
SPACECRAFT POWER SUPPLIES
Antiproton Reactions
Potential development of advanced power sources from current antiproton technology research, 12:12693 (BA;US)
Electric Generators
Advanced high-power generator research program. Final report, January 1984-October 1985, 12:11918 (R;US)
Linear Accelerators
Pulse power supply of a linear accelerator for nondestructive testing, 12:12029 (RA;SU;In Russian)
POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also INTERCONNECTED POWER SYSTEMS
Control
Microprocessor-based monitoring and control project: Phase 2 report, 12:11202 (R;US)
Electrical Transients
Electromagnetic Transients Program (EMTP): Application guide: Final report, 12:11196 (R;US)
Energy Storage
Dynamic operating benefits of energy storage: Final report, 12:11415 (R;US)
Harmonics
The HARMFLO code: Version 4.0: User's guide, 12:11117 (R;US)
Monitoring
Microprocessor-based monitoring and control project: Phase 2 report, 12:11202 (R;US)
Stress Analysis
Advanced power train electrical stress simulation in the AVCO MK VI Test Facility, 12:11488 (BA;US)
POWER TRANSMISSION
See also MICROWAVE POWER TRANSMISSION
Electrical Transients
Electromagnetic Transients Program (EMTP): Application guide: Final report, 12:11196 (R;US)
Radio Noise
Radio interference from HVDC converter stations: Modeling and characterization: Final report, 12:11198 (R;US)
POWER TRANSMISSION LINES
Current Limiters
High-energy surge-arrester technology development. Part 2. Final technical report, 30 June 1982-28 February 1986 on Phase 1, 12:11194 (R;US)

Equipment Protection Devices
A remote tester for surge arresters: Final report, 12:11197 (R;US)
Lightning Arresters
High-energy surge-arrester technology development. Part 2. Final technical report, 30 June 1982-28 February 1986 on Phase 1, 12:11194 (R;US)
Surges
A remote tester for surge arresters: Final report, 12:11197 (R;US)

PP CHAIN

PRESERVATIVES
Comparative Evaluations
Direct acridine orange counting of bacteria preserved with acidified Lugol iodine, 12:12414 (J;US)

PRESSURE GAGES
Fiber Optics
Amplitude-independent fiber-optic pressure sensor: Final report, FY86, 12:12210 (R;US)

PRESSURE MEASUREMENT
Time Dependence
An evaluation of the effect of methane adsorption/desorption in well tests on coal beds: Final technical report, 12:10770 (R;US)

PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS

PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS

PRIMARY COOLANT CIRCUITS
Corrosion Products
Corrosion products release from steel surface into BWR water coolant, 12:11215 (RA;XA)
Crud build-up and migration processes in the primary coolant circuit of Nuclear Power Plant Kozlodui, 12:11229 (RA;XA)
Transfer of radioactive corrosion products in the primary circuit of the WWER-440, 12:11230 (RA;XA)

PRINCETON LARGE TORUS
See PLT DEVICES

PRINTED CIRCUITS
Materials
Measurement of fatigue crack growth kinetics of Copper-Kapton laminates by dynamic mechanical thermal analysis, 12:11718 (R;US)

PRINTING AND PUBLISHING INDUSTRY
Quality Control
Heuristic modeling, 12:12997 (RA;US)

PROBES
See also MUON PROBES
Performance Testing
The effect of rarefaction on impact pressure measurements in supersonic flows, 12:11995 (BA;US)

PROCESS COMPUTERS
Man-Machine Systems
Trends of information processing by means of process computers for reactor operators in the Federal Republic of Germany, 12:11306 (RA;DD;In German)
System Failure Analysis
Trends of information processing by means of process computers for reactor operators in the Federal Republic of Germany, 12:11306 (RA;DD;In German)

PROCESS CONTROL
Energy Consumption
Marketing perspectives of automation systems for production and usage of energy in wood processing industry, preliminary study, 12:11568 (R;FI;In Finnish)
Manuals
Pioneer plants study user's manual, 12:11912 (R;US)
Wood Products Industry
Marketing perspectives of automation systems for production and usage of energy in wood processing industry, preliminary study, 12:11568 (R;FI;In Finnish)

PROCESS DEVELOPMENT UNITS
Optimization
Integrated fuel alcohol production systems: Phase 3, Second annual Experimental Facility testing report for the period January 15, 1985-January 15, 1986, 12:11011 (R;US)

PROCESSING (DATA)

PROPANE
Adsorption Isotherms
Adsorption and desorption of hydrocarbons at low concentrations: Performance report for the period 1 June 1984 to 31 December 1986, 12:11813 (R;US)
Combustion
Kinetics of coal combustion: Seventh quarterly report, 12:10824 (R;US)
Evaporation
Vaporization at supercritical pressures and counterflow condensing of pure and mixed-hydrocarbon working fluids for geothermal power plants, 12:11094 (BA;US)

PROPANONE
See ACETONE

PROPELLANTS
Combustion Kinetics
Model for normal and erosive burning of composite propellants, 12:11907 (R;FR)

PROPENE
See PROPYLENE

PROPORTIONAL COUNTERS
See also MULTIWIRE PROPORTIONAL CHAMBERS
Performance Testing
Evaluation of a high-pressure proportional counter for the detection of radioactive noble gases. Final report, 12:12195 (R;US)

PROPULSION SYSTEMS
Antiproton Reactions
Potential development of advanced power sources from current antiproton technology research, 12:12693 (BA;US)
Research Programs
Space station propulsion technology. Annual progress report, 24 May 1985-23 May 1986, 12:11578 (R;US)

PROPYL RADICALS
Combustion Kinetics
Studies of combustion kinetics and mechanisms: Progress report, June 1, 1984 to December 31, 1986, 12:11905 (R;US)
Oxidation
Studies of combustion kinetics and mechanisms: Progress report, June 1, 1984 to December 31, 1986, 12:11905 (R;US)

PROPYLENE
Cracking
Photolytic enhancement studies: Monthly technical progress report, 04/01/86-04/30/86, 12:10999 (R;US)
PROPYLENE CARBONATE
See CARBONIC ACID ESTERS
PROSPECTING
Statistical Models
Ore reserve estimation: a summary of principles and methods, 12:10901 (R;BR)
PROTACTINIUM 234
Ternary Fission
Extreme asymmetric fission of nuclei produced in thorium bombarding by alpha particles and deuterons, 12:12743 (RA;SU;In Russian)
PROTECTION
See SAFETY
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE CLOTHING
Biological Effects
Assessment of the effects of heat and NBC (nuclear, biological, and chemical) protective clothing on performance of critical military tasks. Final report, 12:11916 (R;US)
Physiological assessments of chemical-threat protective patient wraps in three environments. Manuscript report, 12:11920 (R;US)
PROTECTIVE COATINGS
Meetings
Physics and chemistry of protective coatings, 12:11596 (B;US)
PROTEINS
See also ALBUMINS
CHLOROPHYLL-BINDING PROTEINS
Chemical Properties
Mechanism and structure of nitrogenase Fe-protein, 12:12379 (BA;US)
Electrophoresis
Quality control and technical outcome of ISO-DALT two-dimensional electrophoresis in a clinical laboratory setting, 12:12410 (J;US)
Molecular Structure
Mechanism and structure of nitrogenase Fe-protein, 12:12379 (BA;US)
PROTON BEAMS
Acceleration
Laser-controlled collective ion accelerator, 12:12600 (J;US)
Electron Cooling
Peculiarities of Coulomb relaxation of a cold nonbunched beam in a storage ring, 12:12178 (RA;SU;In Russian)
Radiation Doses
Muon calculations for the polarized proton beamline, 12:12148 (R;US)
PROTON REACTIONS
Capture
Reaction characteristics for proton radiative capture by light nuclei (Targets: ^{7}Li, ^{9}Be, ^{10}B, ^{12}C, ^{13}C, ^{14}N, ^{15}N, ^{16}O, ^{17}O, ^{18}O, ^{19}F, ^{23}Na, ^{25}Mg,^{27}Al), 12:12706 (R;SU;In Russian)
Differential Cross Sections
318 and 800 MeV (p,xn) cross sections, 12:12742 (BA;US)
Elastic Scattering
Nucleon mass equality effect in the elastic pd-scattering at intermediate energies, 12:12809 (R;SU;In Russian)
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXV, 1 September 1985-31 August 1986, 12:12690 (R;US)
Glauber Theory
Elastic pα scattering at high energies, 12:12810 (R;SU;In Russian)
Inelastic Scattering
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXV, 1 September 1985-31 August 1986, 12:12690 (R;US)
Nuclear Reaction Yield
Activation analysis on the 9.1 MeV proton beam, 12:11777 (R;SU;In Russian)
Reaction characteristics for proton radiative capture by light nuclei (Targets: ^{7}Li, ^{9}Be, ^{10}B, ^{12}C, ^{13}C, ^{14}N, ^{15}N, ^{16}O, ^{17}O, ^{18}O, ^{19}F, ^{23}Na, ^{25}Mg,^{27}Al), 12:12706 (R;SU;In Russian)
Particle Production
New limit on axion production in 800-GeV hadronic showers, 12:12640 (J;US)
Spallation
Percolation description of nuclear fragmentation, 12:12753 (RA;US)
PROTON-ANTIPROTON INTERACTIONS
Particle Production
The anti pp yields anti λ λ reaction near threshold, 12:12623 (R;US)
PROTON-NEUTRON INTERACTIONS
Elastic Scattering
Study of the neutron-proton interaction in the 300 to 700 MeV energy region. Annual progress report (1985-1986), 12:12626 (R;US)
PROTON-PROTON CYCLE
See HYDROGEN BURNING
PROTON-PROTON INTERACTIONS
Electromagnetic Radiation
Detecting the radiation amplitude zero in $e^{+-}p \rightarrow e^{+-}p\gamma$, 12:12649 (R;US)
OPE Model
Contribution of the two-pion exchange potentials to the P-odd pp-scattering asymmetry at low energies, 12:12657 (R;SU)
P Invariance
Contribution of the two-pion exchange potentials to the P-odd pp-scattering asymmetry at low energies, 12:12657 (R;SU)
Pair Production
Study of $e^{+}e^{-}$ pairs in the mass range 11 to 25 GeV/c^2 at the CERN intersecting Storage Rings, 12:12641 (J;NL)
PROTONS
Lifetime
Proton lifetime in SO(10) grand unification model, 12:12651 (R;SU)
Particle Decay
Magnetic monopole catalysis of proton decay, 12:12618 (R;US)
Particle Production
Experimental investigations of the particle production process at the stage before the decay of resonances, 12:12718 (R;SU)
Proton yields at angle of 132 deg for ^{6}Li, C, Cu, Pb nuclei in the $\pi^{+-}A \rightarrow pX$ reactions at a π-meson momentum of 1.5 GeV/c, 12:12632 (R;SU;In Russian)
PROTOPLASTS
See PLANT CELLS
PSEUDOMONAS
Respiration
Inhibitor studies of dissimilative Fe(III) reduction by Pseudomonas sp. strain 200 (Pseudomonas ferrireductans), 12:12428 (J;US)
PTERIDINES
Chemical Composition
Characterization of molybdopterin, the organic portion of the molybdenum cofactor, 12:12350 (BA;US)
Purification
Characterization of molybdopterin, the organic portion of the molybdenum cofactor, 12:12350 (BA;US)
PTERINS
See PTERIDINES
PUBLIC BUILDINGS
Energy Consumption
Energy consumption for heating of buildings. Unit consumption for energy planning (Denmark), 12:11535 (R;DK;In Danish)
PUBLIC LANDS
Land Pollution
Hazardous waste on public lands, 12:12297 (J;US)
PULMONARY LAVAGE
See LUNGS
PULPS
See SLURRIES
PULSE COMBUSTORS
Design
Investigation of the characteristics of liquid fuel burning, Rijke type, pulsating combustors, Annual report, 12:12012 (R;US)

Operation
Investigation of the characteristics of liquid fuel burning, Rijke type, pulsating combustors, Annual report, 12:12012 (R;US)
Research Programs
Development of low-noise combustion intensity burners (III), 12:12014 (TG;GB)
PULSED FUSION REACTORS
Lasers
Lasers and particle beam for fusion and strategic defense, 12:12966 (J;US)
Meetings
Lasers and particle beam for fusion and strategic defense, 12:12966 (J;US)
Particle Beams
Lasers and particle beam for fusion and strategic defense, 12:12966 (J;US)
PULSED REACTORS
Reactivity
Influence of the power reactivity effect on the power fluctuation in a pulsed reactor. The case of alternating reactivity oscillation, 12:11240 (R;SU;In Russian)
PULVERIZED FUEL ASH
See FLY ASH
PULVERIZED FUELS
Combustion
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report no. 5 for the period 1 August 1986 to 31 October 1986, 12:10827 (R;US)
Identification of mutagenic constituents in coal-combustion flyash, 12:10838 (BA;US)
Low emission combustor technology, 12:10798 (RA;US)
Combustion Kinetics
Kinetics of coal combustion: Seventh quarterly report, 12:10824 (R;US)
PUMPS

RUTHENIUM 104
Radioecological Concentration
Measurement of Chernobyl fallout activity in grass and soil at Chester, New Jersey, 12:12303 (RA;US)
RUTHENIUM COMPLEXES
Catalytic Effects
Separation of gas mixtures by supported complexes, 12:11788 (R;US)
Chemical Preparation
Electrochemical, spectral, and base-binding studies of heterodinuclear ruthenium-iron complexes of meso-α,α,α,α-tetrakis(nicotinamidophenyl)porphine, 12:11841 (J;US)
Strongly luminescing ruthenium(II)/ruthenium(II) and ruthenium(II)/platinum(II) binuclear complexes, 12:11057 (J;US)
Electron Transfer
Strongly luminescing ruthenium(II)/ruthenium(II) and ruthenium(II)/platinum(II) binuclear complexes, 12:11057 (J;US)
Molecular Structure
Electrochemical, spectral, and base-binding studies of heterodinuclear ruthenium-iron complexes of meso-α,α,α,α-tetrakis(nicotinamidophenyl)porphine, 12:11841 (J;US)
Sorptive Properties
Separation of gas mixtures by supported complexes, 12:11788 (R;US)
RUTHENIUM COMPOUNDS
See also RUTHENIUM OXIDES
Fluorescence Spectroscopy
Development of extended X-ray absorption fine structure spectroelectrochemistry and its application to structural studies of transition-metal ions in aqueous solution, 12:11794 (J;US)
Voltametry
Development of extended X-ray absorption fine structure spectroelectrochemistry and its application to structural studies of transition-metal ions in aqueous solution, 12:11794 (J;US)
RUTHENIUM OXIDES
Catalytic Effects
Materials chemistry, 12:11723 (RA;US)
Chemical Reactions
Gas phase reactions of ruthenium tetroxide with nitrogen oxides: Final report, 12:11754 (R;US)
Evaporation
Gas phase reactions of ruthenium tetroxide with nitrogen oxides: Final report, 12:11754 (R;US)
RYDBERG STATES
Prior to April 1981, this concept was indexed to RYDBERG CORRECTION.
Semiclassical Approximation
Inversion symmetry of hydrogenic expectation values, 12:12606 (J;GB)

S

S CODES
'Sub #4' user guide: computer calculation of longwall subsidence profiles using the NCB Subsidence Engineers Handbook, 12:10777 (R;CA)
Mass balance computation in SAGUARO, 12:10952 (R;US)
S PROCESS
Beta Decay
Nuclear information needs for the astrophysical s-process, 12:12828 (BA;US)
Nuclear Reaction Kinetics
Nuclear information needs for the astrophysical s-process, 12:12828 (BA;US)
S WAVES (SEISMIC)
See SEISMIC S WAVES
SAARBERG-HOLTER PROCESS
Comparative Evaluations
Economic evaluation of FGD systems: Volume 5, The NOXSO and SOXAL sodium-based processes and four additional calcium-based processes: Final report, 12:10761 (R;US)
SACCHAROMYCES CEREVISIAE
DNA Sequencing
Nucleotide sequence, transcript mapping, and regulation of the RAD2 gene of Saccharomyces cerevisiae, 12:12357 (J;US)
Gene Regulation
Nucleotide sequence, transcript mapping, and regulation of the RAD2 gene of Saccharomyces cerevisiae, 12:12357 (J;US)
Genetic Mapping
Nucleotide sequence, transcript mapping, and regulation of the RAD2 gene of Saccharomyces cerevisiae, 12:12357 (J;US)
SACCHAROSE
Biosynthesis
Regulation of photosynthetic sucrose formation in leaves, 12:12399 (BA;US)
Metabolism
Pyrophosphate-dependent glycolysis and regulation by fructose 2,6-bisphosphate in plants, 12:12395 (BA;US)
SAFEGUARDS
Radiometric Analysis
The development of a state-of-the-art assay system for uranium-235 in solutions, 12:11778 (R;US)
SAFETY
For general aspects of safety and protection of personnel.
See also OCCUPATIONAL SAFETY
REACTOR SAFETY
Verification
Explosion overpressure test series: General-Purpose Heat Source development: Safety Verification Test program, 12:10990 (R;US)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SAILS
Auxiliary Systems
Basic material for auxiliary sails on ships, 12:11551 (R;DK;In Danish)
SALINE ZONE
See OIL SHALES
SALINITY
Ground Water
Salinization mechanisms in semi-arid regions. Study of the Pereira de Miranda and Caxitore dams, state of Ceara, Brazil, 12:12282 (R;BR;In Portuguese)

Surface Waters
Salinization mechanisms in semi-arid regions. Study of the Pereira de Miranda and Caxitore dams, state of Ceara, Brazil, 12:12282 (R;BR;In Portuguese)
SALMON
Migration
Juvenile salmonid monitoring at Rock Island Dam bypass sampler: Annual report, 12:12337 (R;US)
SALT DEPOSITS
Mechanical Tests
Uniaxial and triaxial mechanical experiments on rock salt samples from three gulf coast domes, 12:12560 (J;US)
Temperature Effects
Brine migration test report: Asse Salt Mine, Federal Republic of Germany: Technical report, 12:10924 (R;US)
SALT TALKS
Soviet noncompliance, 12:11589 (R;US)
SALTS
Use specific salts whenever possible
See also MOLTEN SALTS
Latent Heat Storage
Application of latent heat stores, 12:11416 (R;SE;In Swedish)
SAMARIUM
Activation Analysis
Samarium and gadolinium determination in ore samples using prompt gamma radiation produced in thermal neutron capture, 12:11758 (RA;CS;In Czech)
SAMARIUM 149 TARGET
Neutron Reactions
Study on the $^{149}Sm(n,\gamma\alpha)$ reaction on thermal neutrons and estimation of radiative strength functions of primary soft γ-transitions, 12:12721 (R;SU;In Russian)
SAMARIUM 150
E1-Transitions
Study on the $^{149}Sm(n,\gamma\alpha)$ reaction on thermal neutrons and estimation of radiative strength functions of primary soft γ-transitions, 12:12721 (R;SU;In Russian)
SAMARIUM 152 TARGET
Neutron Reactions
Study on the mechanism of low-energy neutron interaction with heavy nuclei, 12:12807 (R;SU;In Russian)
SAN ONOFRE-1 REACTOR
San Clemente, California, USA
Reactor Operation
Integrated plant safety assessment: Systematic Evaluation Program, San Onofre Nuclear Generating Station, Unit 1 (Docket No. 50-206): Final report, 12:11378 (R;US)
Reactor Safety
Integrated plant safety assessment: Systematic Evaluation Program, San Onofre Nuclear Generating Station, Unit 1 (Docket No. 50-206): Final report, 12:11378 (R;US)
SANDSTONES
Chemical Reactions
Chemistry of geothermal water when storing at high temperature, 12:11098 (R;SE;In Swedish)
Heat Storage
Chemistry of geothermal water when storing at high temperature, 12:11098 (R;SE;In Swedish)
Rock-Fluid Interactions
Chemistry of geothermal water when storing at high temperature, 12:11098 (R;SE;In Swedish)
SATELLITE POWER SYSTEM
See ORBITAL SOLAR POWER PLANTS
SATELLITE SOLAR POWER STATIONS
See ORBITAL SOLAR POWER PLANTS
SCANDIUM OXIDES
Crystal Growth
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
Stimulated Emission
Measurements of losses and lasing efficiency in GSGG:CR,Nd and YAG:Nd laser rods, 12:11968 (J;US)
SCATTERING
See also LIGHT SCATTERING
Finite Difference Method
Example of delta-problem arising in a finite difference context: direct and inverse problem for the discrete analog of the equation Psi + upsilon Psi = sigma Psi sub gamma, 12:12659 (R;IT)
Many-Dimensional Calculations
Semiclassical methods in chemical physics, 12:12601 (J;US)
Partial Differential Equations
Example of delta-problem arising in a finite difference context: direct and inverse problem for the discrete analog of the equation Psi + upsilon Psi = sigma Psi sub gamma, 12:12659 (R;IT)
Semiclassical Approximation
Semiclassical methods in chemical physics, 12:12601 (J;US)
SCHOOL BUILDINGS
Hazardous Materials
Health-hazard evaluation report HETA 84-248-1694, Wasson Elementary School, Dubois, Pennsylvania, 12:12251 (R;US)
Space HVAC Systems
Lessons learned from a membrane stratified thermal storage system, 12:11419 (BA;US)
Thermal Energy Storage Equipment
Lessons learned from a membrane stratified thermal storage system, 12:11419 (BA;US)
SCHOTTKY BARRIER DIODES
Physical Radiation Effects
Prompt charge collection in gallium arsenide diodes struck by energetic heavy ions. Final report, May 1983-December 1985, 12:11600 (R;US)
SCHROEDINGER EQUATION
Energy Levels
Level comparison theorems and supersymmetric quantum mechanics, 12:12896 (R;AT)
Monte Carlo Method
Quantum Monte Carlo, 12:12898 (J;US)
Numerical Solution
Variational method for the calculation of dynamic polarizabilities and two-photon transition moments. The dressed molecule approach, 12:11881 (J;US)
Polynomials
Polynomial constants for the quantized NLS equation, 12:12902 (J;US)
SCINTILLATION COUNTING
Forecasting
Scintillation counting: an extrapolation into the future, 12:12209 (BA;CA)
SCOTLAND
See UNITED KINGDOM
SCREENING
See also CARCINOGEN SCREENING
MUTAGEN SCREENING
Field Tests
Possibilities to utilize field screening for milled peat, 12:10784 (R;FI;In Finnish)
SCRUBBERS
Corrosion
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)
Materials
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)
SEA BED
Erosion
Interaction between a pipeline and an erodible bed, 12:12015 (R;DK)
Heat Transfer
[In-Situ Heat Transfer Experiment (ISHTE): Final report on contract 52-5769, 12:10954 (R;US)
ISHTE [In-Situ Heat Transfer Experiment] rigging: Final report, 12:10955 (R;US)
Mechanical Properties
Platform designs. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:11932 (R;NO)
Research Programs
[In-Situ Heat Transfer Experiment (ISHTE): Final report on contract 52-5769, 12:10954 (R;US)
ISHTE [In-Situ Heat Transfer Experiment] rigging: Final report, 12:10955 (R;US)

SEALING MATERIALS
Performance Testing
Development and implementation: Test Series B of the small-scale seal performance tests, 12:11730 (R;US)
SEALS
Bubbles
Chemistry of glass-ceramic to metal bonding for header applications: 2. Hydrogen bubble formation during glass-ceramic to metal sealing, 12:11595 (R;US)
SEASONAL THERMAL ENERGY STORAGE
Aquifers
Economics, technology, and systems integration of aquifer thermal-energy storage (Demonstration plant at Hoersholm, Denmark), 12:11418 (R;DK)
Demonstration Plants
Economics, technology, and systems integration of aquifer thermal-energy storage (Demonstration plant at Hoersholm, Denmark), 12:11418 (R;DK)
SEAWATER
Purification
Interaction of $Np(V)O_2^+$ with common mineral surfaces in dilute aqueous solutions and seawater, 12:11899 (J;NL)
Water Chemistry
Mass transfer to an from small particles in the sea, 12:12323 (J;US)
SECONDARY RECOVERY
See ENHANCED RECOVERY
SEDIMENTARY ROCKS
See also SANDSTONES
SHALES
Chemical Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
SEDIMENTS
Activation Analysis
Use of radioanalytical methods in field and laboratory research of deep sea sediment composition, 12:11769 (RA;CS;In Czech)
Chemical Composition
Evaluation of stream sediments in areas of known mineralization, San Jose and Talamanca Quadrangles, Costa Rica: An orientation survey, 12:12561 (R;US)
Compressibility
Theory of sediment volumes of compressible, particulate structures, 12:11802 (J;US)
Sorptive Properties
Interaction of $Np(V)O_2$i with common mineral surfaces in dilute aqueous solutions and seawater, 12:11899 (J;NL)
Volume
Theory of sediment volumes of compressible, particulate structures, 12:11802 (J;US)
X-Ray Fluorescence Analysis
Use of radioanalytical methods in field and laboratory research of deep sea sediment composition, 12:11769 (RA;CS;In Czech)
SEDIMENT-WATER INTERFACES
Mathematical Models
Relevance of scavenging kinetics to modeling of sediment-water interactions in natural waters, 12:12324 (J;US)
SEEDS
Radiosensitivity
Cytogenetics and radiosensitivity for quince tree breeding purpose (Cydonia oblonga Mill.), 12:12485 (RA;BR;In Portuguese)
Cytogenetics and radiosensitivity for quince tree breeding purpose (Cydonia oblonga Mill.), 12:12501 (RA;BR;In Portuguese)
Radiosensitivity of quince seeds (Cydonia oblonga Mill.), 12:12484 (RA;BR;In Portuguese)
Radiosensitivity of quince seeds (Cydonia oblonga Mill.), 12:12500 (RA;BR;In Portuguese)
SEISMIC ARRAYS
See also SEISMIC DETECTORS
Nuclear Explosion Detection
Hydrophone investigations of earthquake and explosion generated high-frequency seismic phases. Final report, October 1983-September 1985, 12:12233 (R;US)
Performance
Detection of regional earthquakes in eastern North America using the RSTN in the frequency range 0.5 to 16 Hz, 12:12541 (RA;US)
Seismic Detection
Core phases recorded by the RSTN, 12:12543 (RA;US)
Direct measurement of the mantle attenuation operator from broadband P and S waveforms, 12:12544 (RA;US)
Earthquakes source spectra to 15 Hz, 12:12540 (RA;US)
Excitation, propagation, and detection of L/sub g/, S/sub n/, and P/sub n/ seismic waves from EUS earthquakes by regression analysis of RSTN data, 12:12538 (RA;US)
Observations of body wave multipathing from RSTN data, 12:12545 (RA;US)
Single station detection and location of regional events, 12:12542 (RA;US)
Variability of regional phase properties from the Yellowknife earthquakes and aftershocks, 12:12539 (RA;US)
SEISMIC DETECTION
Efficiency
Detection of regional earthquakes in eastern North America using the RSTN in the frequency range 0.5 to 16 Hz, 12:12541 (RA;US)
SEISMIC DETECTORS
Signal Conditioning
Single station detection and location of regional events, 12:12542 (RA;US)
SEISMIC EVENTS
See also EARTHQUAKES
Data Analysis
Cooperating intelligent agents, 12:13005 (R;US)
Detection
Observations of body wave multipathing from RSTN data, 12:12545 (RA;US)
Single station detection and location of regional events, 12:12542 (RA;US)
Seismic Waves
Core phases recorded by the RSTN, 12:12543 (RA;US)
SEISMIC P WAVES
Attenuation
Direct measurement of the mantle attenuation operator from broadband P and S waveforms, 12:12544 (RA;US)
SEISMIC S WAVES
Attenuation
Direct measurement of the mantle attenuation operator from broadband P and S waveforms, 12:12544 (RA;US)
SEISMIC SOURCES
Detection
Single station detection and location of regional events, 12:12542 (RA;US)
Spectra
Earthquakes source spectra to 15 Hz, 12:12540 (RA;US)
SEISMIC SURVEYS
Data Acquisition
Geophysical applications for the future, 12:10842 (RA;NO)
Data Processing
Geophysical applications for the future, 12:10842 (RA;NO)
SEISMIC WAVES

SEISMIC S WAVES
Absorption
Absorption of seismic waves: Determination of attenuation from reflection seismic surveys and estimation of the attenuation of seam waves, 12:12549 (RA;DE)
Absorption of seismic waves in geothermally abnormal regions from seismic refraction data, 12:12553 (RA;DE)
Core phases recorded by the RSTN, 12:12543 (RA;US)
Estimation of the absorption of seismic waves, 12:12547 (RA;DE)
Experimental studies of the absorption of seismic waves, 12:12546 (RA;DE)
Experimental and theoretical petrophysical investigations on relations between the inelastic absorption in porous rocks and other petrophysical and reservoir parameters, 12:12552 (RA;DE)

High temperature experiments on the elastic and an elastic behaviour of magmatic rocks, 12:12557 (RA;DE)
Investigations of seismic wave absorption by means of model-seismic experiments, 12:12550 (RA;DE)
Measurements of Q on natural rock samples in different frequency ranges, 12:12551 (RA;DE)

Attenuation
Absorption of seismic waves: Determination of attenuation from reflection seismic surveys and estimation of the attenuation of seam waves, 12:12549 (RA;DE)
Determination of the attenuation of seismic waves from actual field data, as well as considerations to fundamental questions from model- and laboratory measurements, 12:12548 (RA;DE)

Detection
Excitation, propagation, and detection of L/sub g/, S/sub n/, and P/sub n/ seismic waves from EUS earthquakes by regression analysis of RSTN data, 12:12538 (RA;US)

Phase Velocity
Variability of regional phase properties from the Yellowknife earthquakes and aftershocks, 12:12539 (RA;US)

Reflection
Determination of the attenuation of seismic waves from actual field data, as well as considerations to fundamental questions from model- and laboratory measurements, 12:12548 (RA;DE)

Shear Properties
High temperature experiments on the elastic and an elastic behaviour of magmatic rocks, 12:12557 (RA;DE)

Spectra
Core phases recorded by the RSTN, 12:12543 (RA;US)

Transmission
Determination of the attenuation of seismic waves from actual field data, as well as considerations to fundamental questions from model- and laboratory measurements, 12:12548 (RA;DE)

Wave Propagation
Observations of body wave multipathing from RSTN data, 12:12545 (RA;US)
Variability of regional phase properties from the Yellowknife earthquakes and aftershocks, 12:12539 (RA;US)

SELENIUM
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)

SELENIUM 78
E1-Transitions
Calculation of the E1-transition probabilities in sup(78)Se, sup(78)Kr with account for microscopic structure of excited states of octupole and quadrupole type, 12:12779 (RA;SU;In Russian)

SEMICONDUCTOR LASERS
Bragg Reflection
Self-induced frequency scanning and distributed Bragg reflection in semiconductor lasers with phase-conjugate feedback, 12:11948 (R;US)

Frequency Analysis
Self-induced frequency scanning and distributed Bragg reflection in semiconductor lasers with phase-conjugate feedback, 12:11948 (R;US)

Spectral Response
Spectral linewidth of semiconductor lasers, 12:11947 (R;US)

SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.

Activation Analysis
Determination of horizontal and vertical distribution of some dopants in silicon plates using INAA, 12:11766 (RA;CS;In Czech)

Electronic Structure
Electron density of states in random systems, 12:11743 (BA;US)

Energy-Level Density
Electron density of states in random systems, 12:11743 (BA;US)

Order-Disorder Transformations
Electron density of states in random systems, 12:11743 (BA;US)

SENIOR CENTERS
See PUBLIC BUILDINGS

SERPUKHOV SYNCHROTRON

Background Radiation
Calculation of radiation and background conditions on the IHEP tagged neutrino channel, 12:12156 (RA;SU;In Russian)

Beam Bunching
Experimental study on the beam coherent transverse instability in the IHEP accelerator, 12:12054 (RA;SU;In Russian)

Instability
Suppression of longitudinal instability during beam passage through the critical energy in the IHEP accelerator, 12:12053 (RA;SU;In Russian)

Neutrino Beams
Calculation of radiation and background conditions on the IHEP tagged neutrino channel, 12:12156 (RA;SU;In Russian)

On-Line Measurement Systems
Time analyzing system for neutron secondary radiation in an accelerator cycle, 12:12157 (RA;SU;In Russian)

Superconducting Magnets
Development of superconducting dipoles for UNK, 12:12079 (RA;US)

SET THEORY
Connectivity properties of Mandelbrot's percolation process, 12:12882 (R;US)

SEWAGE SLUDGE
Environmental Effects
Phosphorus solubility in sludge-amended calcareous soils, 12:12296 (J;US)

SHALES
Geochemistry
Proceedings of the first geochemical workshop on shale: Environmental Sciences Division publication No. 2845, 12:10948 (R;US)

Meetings
Proceedings of the first geochemical workshop on shale: Environmental Sciences Division publication No. 2845, 12:10948 (R;US)

Sorptive Properties
Nuclear waste chemistry, 12:12559 (RA;US)

SHALLOW LAND BURIAL
See GROUND DISPOSAL

SHATTERING
See FRAGMENTATION

SHEAR
Computerized Simulation
Particle-dynamics calculations of shear flow, 12:11996 (BA;NL)

SHEAR WAVES (SEISMIC)
See SEISMIC S WAVES

SHEATHS (FUEL)
See FUEL CANS

SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS

SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR

SHIPPINGPORT REACTOR
Reactor Decommissioning
Shippingport Station Decommissioning Project (SSDP). A progress report, 12:11329 (R;US)

SHIPS
Cost
Marine transport costs and coal trade, 12:10835 (R;GB)

Sails
Basic material for auxiliary sails on ships, 12:11551 (R;DK;In Danish)

Size
Marine transport costs and coal trade, 12:10835 (R;GB)

SHORT ROTATION CULTIVATION
Role of meteorology in Swedish conventional and short-rotation forestry, 12:11053 (R;SE;In Swedish)

Site Surveys
Site descriptions of Swedish energy forests. Background data from a plant conservation study, 12:11052 (R;SE)

SHORT WAVE RADIATION
Polarization
Submillimeter wave propagation in tokamak plasmas, 12:12938 (J;US)
SHRUBS
Nitrogen Fixation
Utilization of photosynthate for nitrogen fixation in seedlings of Myrica gale and Alnus rubra, 12:12380 (BA;US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SICILY
Energy Supplies
Investigation of energy consumption and availability of alternative energy sources. Final report, 12:11479 (R;DE;In Italian)
SIGMA MODEL
Metrics
Eguchi-Hanson type metrics from harmonic superspace, 12:12672 (R;SU)
Quantization
How to quantize supersymmetric theories, 12:12670 (R;SU)
On quantization of supersymmetric theories, 12:12668 (R;SU)
Renormalization
Renormalizations in 1/N expansion in σ-model, 12:12669 (R;SU)
Supersymmetry
Eguchi-Hanson type metrics from harmonic superspace, 12:12672 (R;SU)
How to quantize supersymmetric theories, 12:12670 (R;SU)
On quantization of supersymmetric theories, 12:12668 (R;SU)
SIGMA-MINUS ATOMS
See HADRONIC ATOMS
SILICA
Catalytic Effects
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Chemical Reactions
Materials chemistry, 12:11723 (RA;US)
Dissolution
Chemistry of geothermal water when storing at high temperature, 12:11098 (R;SE;In Swedish)
Fatigue
Mechanism of mechanical fatigue of fused silica: Progress report, January 1, 1986-November 30, 1986, 12:11709 (R;US)
Infrared Spectra
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Light Scattering
Structure data form light scattering studies of aerogel, 12:11746 (J;US)
Molecular Structure
Structure data form light scattering studies of aerogel, 12:11746 (J;US)
Optical Properties
Structure data form light scattering studies of aerogel, 12:11746 (J;US)
Sorptive Properties
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Picosecond pump-probe experiments on surface-adsorbed dyes: ground-state recovery of rhodamine 640 on ZnO and fused silica, 12:11874 (J;US)
SILICEOUS ROCK
See SANDSTONES
SILICIDES
See also CERIUM SILICIDES
RHODIUM SILICIDES
URANIUM SILICIDES
VANADIUM SILICIDES
Oxidation
Phenomenological study of the behavior of some silica formers in a high-velocity jet fuel burner. Technical memo, 12:11579 (R;US)
SILICON
Annealing
Stress effects on Raman measurements of pulsed laser annealed silicon, 12:11674 (J;US)
Crystal Doping
Deuteron magnetic resonance in some amorphous semiconductors, 12:11655 (BA;US)
Crystal Structure
Neutron topography study of large single crystals by the local rocking curves method, 12:11631 (R;SU)
Predicting new solids and superconductors, 12:12873 (J;US)
Electron Collisions
Energy dependence of axial coherent bremsstrahlung at low accelerating voltages, 12:12584 (R;US)
Electronic Structure
Predicting new solids and superconductors, 12:12873 (J;US)
Grain Orientation
Computer calculation of synchrotron topograms. 2. High-precision determination of crystal orientation on synchrotron diffractometer, 12:11710 (R;SU;In Russian)
Hydrogenation
Deep level effects in silicon and germanium after plasma hydrogenation, 12:11682 (J;US)
Microstructure
Computer calculation of synchrotron topograms. 3. Determination of misorientation parameters of mosaic crystal, 12:11711 (R;SU;In Russian)
Neutron Diffraction
Neutron topography study of large single crystals by the local rocking curves method, 12:11631 (R;SU)
Oxidation
Contamination layers on EUV [extreme ultraviolet] reflectors, 12:11630 (R;US)
Photolysis
Stress effects on Raman measurements of pulsed laser annealed silicon, 12:11674 (J;US)
Photonuclear Reactions
Inelastic scattering in condensed matter with high intensity Moessbauer radiation: Progress report for period March 1, 1986-October 31, 1986, 12:12861 (R;US)
Superconductivity
Predicting new solids and superconductors, 12:12873 (J;US)
Temperature Distribution
Simulation of the temperature distribution in crystals grown by Czochralski method, 12:11037 (RA;US)
Trace Amounts
Point defects and the mechanisms of electrical conduction in olivine, 12:11744 (BA;US)
Vibrational States
Predicting new solids and superconductors, 12:12873 (J;US)
X-Ray Diffraction
Computer calculation of synchrotron topograms. 2. High-precision determination of crystal orientation on synchrotron diffractometer, 12:11710 (R;SU;In Russian)
Zone Melting
High purity low defect FZ silicon, 12:11035 (RA;US)
SILICON 30
Hadronic Atoms
Antiprotonic atomic energy levels via the (p vector, p) reaction, 12:12604 (J;NL)
SILICON ALLOYS
Crystal Doping
Deuteron magnetic resonance in some amorphous semiconductors, 12:11655 (BA;US)
Density
Density of Fe-Si-B metallic glasses, 12:11627 (R;HU)
Internal Friction
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Magnetic Properties
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
Shear Properties
Influence of magnetic annealing on shear modulus and internal friction of $Fe_{78}Si_{10}B_{12}$ metallic glass, 12:11626 (R;HU)
SILICON CARBIDES
Chemical Preparation
Microscopy of SiC powders synthesized by reacting colloidal silica and pitch, 12:11700 (J;US)

Impurities
Surface characterization of silicon nitride and silicon carbide powders, 12:11692 (J;US)
Microstructure
Microscopy of SiC powders synthesized by reacting colloidal silica and pitch, 12:11700 (J;US)
Particle Size
Microscopy of SiC powders synthesized by reacting colloidal silica and pitch, 12:11700 (J;US)
Raman Spectroscopy
Materials chemistry, 12:11723 (RA;US)
Surface Properties
Surface characterization of silicon nitride and silicon carbide powders, 12:11692 (J;US)
Thermal Conductivity
Determination of thermal conductivity from specific heat and thermal diffusivity measurements of plasma-sprayed cermets, 12:12967 (J;US)

SILICON NITRIDES
Chemical Vapor Deposition
The synthesis of ultrafine Si_3N_4 in a hybrid plasma, 12:11697 (TJ;US)
Impurities
Surface characterization of silicon nitride and silicon carbide powders, 12:11692 (J;US)
Surface Properties
Surface characterization of silicon nitride and silicon carbide powders, 12:11692 (J;US)
Synthesis
The synthesis of ultrafine Si_3N_4 in a hybrid plasma, 12:11697 (TJ;US)

SILICON SOLAR CELLS
Carrier Lifetime
Oxygen and carbon in silicon, 12:11041 (RA;US)
Crystal Defects
Defects in silicon effect on device performance and relationship to crystal growth conditions, 12:11036 (RA;US)
Crystal Growth Methods
Convective effects in float-zone and Czochralski melts, 12:11038 (RA;US)
Defects and device performance, 12:11043 (RA;US)
Defects in silicon effect on device performance and relationship to crystal growth conditions, 12:11036 (RA;US)
Future application of Czochralski crystal pulling for silicon, 12:11031 (RA;US)
High purity low defect FZ silicon, 12:11035 (RA;US)
Impurities in silicon solar cells, 12:11040 (RA;US)
MCZ: striations in Cz silicon crystals grown under various axial magnetic field strengths, 12:11034 (RA;US)
New outlook on control of crystalline and chemical perfection during growth of silicon, 12:11033 (RA;US)
Potential productivity benefits of float-zone vs Czochralski crystal growth, 12:11032 (RA;US)
Simulation of the temperature distribution in crystals grown by Czochralski method, 12:11037 (RA;US)
Status of silicon ribbon growth technology for high-efficiency silicon solar cells, 12:11030 (RA;US)
Thermal-capillary model for Czochralski growth of semiconductor materials, 12:11039 (RA;US)
Defects
Defects and device performance, 12:11043 (RA;US)
Solar cell and I.C. aspects of ingot-to-slice mechanical processing, 12:11042 (RA;US)
Fabrication
Large-area sheet task: Advanced dendritic web growth development: Final report, October 1980 to May 1985, 12:11044 (R;US)
Potential productivity benefits of float-zone vs Czochralski crystal growth, 12:11032 (RA;US)
Solar cell and I.C. aspects of ingot-to-slice mechanical processing, 12:11042 (RA;US)
Impurities
Impurities in silicon solar cells, 12:11040 (RA;US)
Oxygen and carbon in silicon, 12:11041 (RA;US)
Materials
Material requirements for high-efficiency silicon solar cells, 12:11029 (RA;US)
Performance
Defects and device performance, 12:11043 (RA;US)
Impurities in silicon solar cells, 12:11040 (RA;US)
Research Programs
Status of chemical vapor deposition methods for hydrogenated amorphous silicon, 12:11058 (BA;US)
Surface Contamination
Determination of effects of atmospheric contamination on photovoltaic cells in concentrating systems, 12:11046 (R;US)
Technology Assessment
Material requirements for high-efficiency silicon solar cells, 12:11029 (RA;US)

SILVER
Activation Analysis
Trace element determination in materials with high boron content using neutron activation analysis, 12:11764 (RA;CS;In Czech)
Carbon 12 Reactions
Inelastic collisions of neon-22 nuclei with nuclei in photoemulsion at 90 GeV/c momentum, 12:12713 (RA;SU;In Russian)
Electrochemical Corrosion
Laser Raman spectroscopic study of anodic corrosion films on silver and copper, 12:11859 (J;NL)
Neon 22 Reactions
Inelastic collisions of neon-22 nuclei with nuclei in photoemulsion at 90 GeV/c momentum, 12:12713 (RA;SU;In Russian)

SILVER 108 TARGET
Alpha Reactions
Analysis of experimental data on light nucleus production in relativistic αA-interactions within the generalized coalescence model, 12:12820 (R;SU;In Russian)

SILVER 110
Coprecipitation
Concentration and separation of selected radionuclides from water samples by coprecipitation, 12:11773 (RA;CS;In Czech)

SILVER ALLOYS
Phase Studies
Tritium in Pd and Pd /SUB 0.80/ Ag /SUB 0.20/ , 12:11654 (BA;US)

SILVER ORES
Leaching
Geothermal enhancement of mineral processing in Nevada: Final report, April 25, 1985-June 30, 1986, 12:11096 (R;US)

SKATING RINKS
Thermodynamic Properties
Modelling of thermal processes in indoor icerinks, 12:11518 (R;DK)
Vapor Condensation
Modelling of thermal processes in indoor icerinks, 12:11518 (R;DK)

SKYRMIONS
See SOLITONS

SLAGS
Adhesion
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)
Chemical Analysis
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines, 12:10808 (RA;US)
Removal
A 50 MW/sub t/ slag rejector development and design, 12:11490 (BA;US)
Water blowing of fireside deposits in coal-fired: Utility boilers: Final report, 12:11154 (R;US)
Viscosity
Surface adhesion of low-rank coal ash: Quarterly report, January 1986-March 1986, 12:11118 (R;US)

SLOT OVENS
See COKE OVENS

SLOWING-DOWN THEORY (NEUTRON)
See NEUTRON SLOWING-DOWN THEORY

SLURRIES
See also FUEL SLURRIES

Turbulent Flow
Fixation of waste materials in grouts: Part 3, Equation for critical flow rate (Velocity for turbulent flow in a pipe), 12:10947 (R;US)

SLURRIES (FUEL)
See FUEL SLURRIES

SLURRY PIPELINES
Centrifugal Pumps
Optimum wearing high efficiency design of phosphate slurry pumps, 12:10789 (BA;US)

SMALL-SCALE HYDROELECTRIC POWER PLANTS
[Small-Scale Hydroelectric Power Demonstration Project]: Jackson Bluff Hydroelectric Project: Final technical and construction cost report (Near Tallahassee, Florida), 12:11017 (R;US)

SMOKATRON
See ELECTRON-RING ACCELERATORS

SMOKES
Particle Size
The effect of aging on smoke optical properties and scavenging characteristics, 12:12261 (R;US)

SODA ASH
See SODIUM CARBONATES

SODIUM
Emission Spectroscopy
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report, 12:10707 (R;US)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
Intake
Effect of gamma radiation on sodium channels in different conformations in neuroblastoma cells, 12:12466 (R;US)
Monitoring
On-line measurement of the alkali and particulate loading of the process stream of a fixed-bed gasifier: Research report, 12:10707 (R;US)
Sorption
Sorption of fuel-bound contaminants for coal and CWM-fired gas turbine systems, 12:10811 (RA;US)

SODIUM CARBONATES
Catalytic Effects
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)
Labelling
Catalyzed gasification of coal: Isotope and XPS studies: Final report, July 15, 1982-October 15, 1986, 12:10715 (R;US)

SODIUM CHLORIDES
Membrane Transport
The role of membranes and transport in the salt tolerance of halobacteria, 12:12412 (R;US)

SODIUM CITRATES
See SODIUM COMPOUNDS

SODIUM COMPOUNDS
See also SODIUM CARBONATES
SODIUM CHLORIDES
SODIUM FLUORIDES
SODIUM HYDROXIDES
SODIUM SULFATES
SODIUM SULFIDES
Chemical Reactions
Materials chemistry, 12:11723 (RA;US)
Dielectric Properties
Thermodynamic properties of pure and dilute alkali cyanides: short range order effects, 12:11726 (R;BR)
Interaction Range
Thermodynamic properties of pure and dilute alkali cyanides: short range order effects, 12:11726 (R;BR)
Phase Diagrams
Extension of the Lifshitz-point concept to first-order phase transitions: Incommensurate $NaNO_2$ in a transverse electric field, 12:11733 (J;US)

SODIUM FLUORIDES
Quantitative Chemical Analysis
Determination of oxygen in molten alkali halide salts by proton activation analysis, 12:11792 (J;US)

SODIUM HYDROXIDES
Enthalpy
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)
Free Enthalpy
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)
Thermodynamic Activity
Aqueous chemistry at high temperatures and pressures, 12:11820 (RA;US)

SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS

SODIUM MINERALS
See MINERALS

SODIUM SULFATES
Deposition
Experiments on coal mineral matter deposition from combustion gases, 12:10813 (RA;US)

SODIUM SULFIDES
Electrochemistry
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)
Structural Chemical Analysis
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)
Thermodynamic Properties
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)

SOFT X RADIATION
Bragg Reflection
X-ray reflection from novel multilayers with variable smoothness and figure: Final technical report for the period 1 April 1984-15 May 1986, 12:12201 (R;US)
Holography
Applications of holography to X-ray imaging, 12:12408 (J;US)

SOIL MECHANICS
Diffusion
Use of ^{36}Cl diffusion to assess changes in pore geometry of allophane soils resulting from drying, 12:12285 (RA;BR)

SOILS
Adsorption Isotherms
Isotopically exchangeable phosphorus as a correction value to adsorption isotherms. Agriculturist applications, 12:12286 (RA;BR;In Spanish)
Isotopically exchangeable phosphorus as a correction value to adsorption isotherms. Agriculturist applications, 12:12453 (RA;BR;In Spanish)
Contamination
Remedial action plan for gasoline leak near Building 403, Lawrence Livermore National Laboratory, Livermore, California, 12:12331 (R;US)
Diffusion
Use of ^{36}Cl diffusion to assess changes in pore geometry of allophane soils resulting from drying, 12:12288 (RA;BR)
Hydrology
Effects of surface collapse structures on infiltration and moisture redistribution, 12:12316 (R;US)
Nitrogen Cycle
Fate of nitrogenous fertilizers in forest soil, 12:12432 (RA;BR)
Fate of nitrogenous fertilizers in forest soil, 12:12289 (RA;BR)
Radioactivity
Comparison of in-situ and laboratory measurement methods for radium-226 in soils, 12:10980 (R;US)
Radionuclide Migration
Chemical characterization, leach, and adsorption studies of solidified low-level wastes, 12:10979 (R;US)
Isotopically exchangeable phosphorus. Critique revision, 12:12305 (RA;BR;In Spanish)
Sorptive Properties
Hydrophobic sorption of polar organics by low organic carbon soils, 12:12298 (J;NL)

SOLAR ACTIVITY
See also SOLAR FLARES
SOLAR RADIO BURSTS
SOLAR WIND
SOLAR X-RAY BURSTS

Compact, variable, moving sources on the sun at 2-cm wavelength, 12:12565 (R;US)

SOLAR BATTERIES
See SOLAR CELL ARRAYS

SOLAR CELL ARRAYS
Testing
Photovoltaic membrane (PVM) roof system: Final technical report, 12:11025 (R;US)
Wind Loads
Photovoltaic membrane (PVM) roof system: Final technical report, 12:11025 (R;US)

SOLAR CELLS
See also CONCENTRATOR SOLAR CELLS
GALLIUM ARSENIDE SOLAR CELLS
SILICON SOLAR CELLS
Fabrication
The preparation of thin films for photovoltaic conversion by novel MOCVD [metallorganic chemical vapour deposition] techniques: Annual subcontract report, 15 February 1985-15 April 1986, 12:11047 (R;US)

SOLAR COLLECTORS

STACK DISPOSAL
Air Pollution
Experimental study of stack plume rise and dispersion at the power station, 12:11179 (R;US)
STAINLESS STEEL-304
Crack Propagation
Analysis of cracks in stainless steel TIG [tungsten inert gas] welds, 12:11217 (R;US)
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Failures
Elastic-plastic finite element analysis of crack growth in large compact tension and circumferentially through-wall-cracked pipe specimen: Results of the first Battelle/NRC analysis round robin, 12:11635 (R;US)
Grain Boundaries
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)
Microstructure
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)
Pipes
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Reactor Materials
Analysis of cracks in stainless steel TIG [tungsten inert gas] welds, 12:11217 (R;US)
Stress Corrosion
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Thermomechanical Treatments
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)
STAINLESS STEEL-310
Mechanical Properties
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
STAINLESS STEEL-316
Crack Propagation
Assessment of creep-fatigue crack growth behavior, 12:11606 (RA;US)
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)

Grain Boundaries
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)
Mechanical Properties
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Microstructure
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)
Pipes
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Stress Corrosion
Probability of failure in BWR reactor coolant piping: Probabilistic treatment of stress corrosion cracking in 304 and 316NG BWR piping weldments, 12:11407 (R;US)
Thermomechanical Treatments
Measurement and prediction of thermomechanical history effects on sensitization development in austenitic stainless steels, 12:11653 (BA;US)

STAINLESS STEEL-317
Materials Testing
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)

STAINLESS STEELS
See also STAINLESS STEEL-304
STAINLESS STEEL-310
STAINLESS STEEL-316
STAINLESS STEEL-317
Corrosion Fatigue
The role of passive surface films on corrosion fatigue crack initiation: Technical progress report, 12:11610 (R;US)
Crack Propagation
Evaluation of flawed-pipe experiments: Final report, 12:11208 (R;US)
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
Electrochemical Corrosion
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)
Fracture Mechanics
Evaluation of flawed-pipe experiments: Final report, 12:11208 (R;US)
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
Passivation
A percolation model for passivation in stainless steels, 12:11648 (J;US)
Physical Radiation Effects
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)
Pipes
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)
Stress Corrosion
Toughness of austenitic stainless steel pipe welds: Topical report, 12:11206 (R;US)

STANDARD REFERENCE MATERIALS
See CALIBRATION STANDARDS

STANDING CROP

STAR CLUSTERS
Star Models
UV observations of blue stragglers and population 2 K dwarfs. Final Technical report, 1 July 1984-30 June 1986, 12:12573 (R;US)
Ultraviolet Spectra
UV observations of blue stragglers and population 2 K dwarfs. Final Technical report, 1 July 1984-30 June 1986, 12:12573 (R;US)

STAR EVOLUTION
See also S PROCESS
UV observations of blue stragglers and population 2 K dwarfs. Final Technical report, 1 July 1984-30 June 1986, 12:12573 (R;US)
Infrared Spectra
Far-infrared spectral studies from the G. P. Kuiper Airborne Observatory. Final Technical report, 1 October 1978-31 October 1986, 12:12572 (R;US)

STATE BUILDINGS
See PUBLIC BUILDINGS

STATIONARY POLLUTANT SOURCES
Used for general articles when sources are not named. See also specific stationary sources, e.g., Fossil-fuel Power Plants.
Emission
Stationary source sampling report: Volatile organic compounds testing, 300-M area air stripper exhaust stack, 12:12242 (R;US)

STATISTICAL MECHANICS
Parallel Processing
Minimization by simulated annealing: Is detailed balance necessary, 12:12884 (R;US)

STEADY-STATE CONDITIONS
Reached when all transients fade out.
Computerized Simulation
A simplified system for steady state process simulation, 12:10940 (R;US)

STEAM
Compression
Utilization of mechanical compression of steam in large-scale industry, 12:11567 (R;FI;In Finnish)

STEAM CONDENSERS
Corrosion Protection
Oxygen control in cycling power plants, 12:11145 (RA;US)
Economic Analysis
Advanced dry-cooling demonstration: Summary: Final report, 12:11153 (R;US)
Heat Transfer
Advanced dry-cooling demonstration: Summary: Final report, 12:11153 (R;US)
Materials
Advanced dry-cooling demonstration: Summary: Final report, 12:11153 (R;US)

STEAM COOLANT
See STEAM

STEAM GENERATORS
Computerized Control Systems
Application of MVPACK to the design of multivariable control systems for a nuclear steam generator, 12:11297 (RA;US)
EPRI digital feedwater control project: system verification plans in an operating plant, 12:11288 (RA;US)
Microprocessor system for low power feedwater control, 12:11273 (RA;US)
Optimal control strategy in the design of a PWR feedwater controller, 12:11286 (RA;US)
Signal validation and failure correction algorithms for PWR steam generator feedwater control, 12:11287 (RA;US)
Corrosion Products
Chemical cleaning waste disposal: Final report, 12:10937 (R;US)
Corrosion product transport in a cycling fossil plant, 12:11133 (RA;US)
Corrosion Protection
Oxygen control in cycling power plants, 12:11145 (RA;US)
Design
Design considerations for the cycling conversion of a once-through steam generator, 12:11137 (RA;US)
Feedwater
Cycling effects on boiler feed pumps, 12:11135 (RA;US)
Modifications
Design considerations for the cycling conversion of a once-through steam generator, 12:11137 (RA;US)
Drum boiler components cycling effects and solutions, 12:11138 (RA;US)
Operation
Boiler stress and condition analyzer, 12:11139 (RA;US)

Drum boiler components cycling effects and solutions, 12:11138 (RA;US)
Flame monitoring: an aid to boiler cycling, 12:11136 (RA;US)
Session A-1: boiler and related auxiliaries, 12:11146 (RA;US)
Session A-2: boilers and related auxiliaries, 12:11147 (RA;US)
Start-Up
Session A-1: boiler and related auxiliaries, 12:11146 (RA;US)
Stress Analysis
Boiler stress and condition analyzer, 12:11139 (RA;US)
Tubes
Evaluation of intergranular attack on Alloy 600: Volume 1, Evaluation of causes: Final report, 12:11617 (R;US)

STEAM INJECTION
Bench-Scale Experiments
Three-dimensional laboratory simulation of the hot-gas injection process for tar sand, 12:10895 (R;US)
Using micromodels to study steam displacement processes in porous media: A literature review and topical report (With structural models), 12:10855 (R;US)
Evaluation
Screening and laboratory flow studies for evaluating EOR [enhanced oil recovery] methods: Topical report, 12:10854 (R;US)

STEAM SUPERHEATERS
See SUPERHEATERS

STEAM TURBINES
Bypasses
Evaluation of turbine bypass systems to facilitate cycling operation, 12:11143 (RA;US)
Modeling of alternative steam bypass systems for hot restarts, 12:11142 (RA;US)
Corrosion Protection
Oxygen control in cycling power plants, 12:11145 (RA;US)
Operation
Cycling capability of supercritical turbines: a world wide assessment, 12:11134 (RA;US)
Evaluation of turbine bypass systems to facilitate cycling operation, 12:11143 (RA;US)
Session B-2: turbines and turbine auxiliaries working, 12:11148 (RA;US)
Session B-1: turbines and auxiliaries, 12:11149 (RA;US)
Update on partial-arc admission turbines for cycling applications, 12:11141 (RA;US)
Performance
Update on partial-arc admission turbines for cycling applications, 12:11141 (RA;US)
Stresses
Session B-2: turbines and turbine auxiliaries working, 12:11148 (RA;US)

STEEL INDUSTRY
See METAL INDUSTRY

STEEL-ASTM-A533
Fracture Properties
Development of an analytic key curve approach to drop tower J-R curve measurement, 12:11636 (R;US)

STEELS
See also AUSTENITIC STEELS
CARBON STEELS
CHROMIUM STEELS
FERRITIC STEELS
STAINLESS STEELS
STEEL-ASTM-A533
Corrosion
Chloride induced corrosion in the generation and processing of gas produced from hard coal by the Lurgi high pressure gasification process, 12:10741 (TJ;GB)
Elasticity
Determination of elastic constants in matals by ultrasonic resonance method, 12:11634 (R;SU;In Russian)
Fatigue
Time and temperature-dependent processes affecting near threshold fatigue crack growth, 12:11603 (R;US)
Fracture Properties
Development of an analytic key curve approach to drop tower J-R curve measurement, 12:11636 (R;US)
Mechanical Properties
Role of niobium in a dual-phase steel, 12:11673 (J;GB)
Quantitative Chemical Analysis
The determination by x-ray fluorescence of platinum, palladium, ruthenium, iron, and chromium in special steels, 12:11780 (R;ZA)
Thermal Diffusion
Application of variation method to multicomponent thermal diffusion in solid phase, 12:11620 (R;SU;In Russian)
Ultrasonic Testing
Determination of elastic constants in matals by ultrasonic resonance method, 12:11634 (R;SU;In Russian)
Uses
Platform designs. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:11932 (R;NO)
Wear
Electrochemical wear of steel, 12:11607 (RA;US)

STELLAR CORONAE
For the sun use SOLAR CORONA.
See also SOLAR CORONA
Plasma
Coronal plasmas on the sun and nearby stars, 12:12564 (R;US)

STELLARATORS
Ballooning Instability
Self-excitation of the ballooning tearing mode and the nature of anomalous transport in toroidal magnetic confinement systems, 12:12914 (R;US)
ECR Heating
On the peculiarities of SHF radiation absorption under the electron-cyclotron method of creation of stationary plasma in stellarator Saturn, 12:12928 (R;SU;In Russian)
Tearing Instability
Self-excitation of the ballooning tearing mode and the nature of anomalous transport in toroidal magnetic confinement systems, 12:12914 (R;US)

STES
See SEASONAL THERMAL ENERGY STORAGE

STIMULATED EMISSION DEVICES
See GASERS
LASERS
MASERS

STIRLING ENGINES
Design
Study and construction of a sealed electric output 3 kW stirling engine breadboard model, 12:11585 (R;FR;In French)

STOCKPILES
Compacting
Impact roller tests on discard coal at Van Dyks Drift Colliery, 12:10700 (R;ZA)

STORAGE FACILITIES
Design
The effects of target hardness on the structural design of concrete storage pads for spent-fuel casks: Final report, 12:10913 (R;US)

STORAGE RINGS
See also HERA STORAGE RING
LEAR
SUPERCONDUCTING SUPER COLLIDER
TRISTAN STORAGE RINGS
VEPP-2
VEPP-4
Beam Cooling
Beam heating near the threshold of low-dissipative instability, 12:12177 (RA;SU;In Russian)
Betatron Oscillations
Space charge effects in the UNK, 12:12187 (RA;SU;In Russian)
Magnetic Fields
Effect of a cubic nonlinearity of storage ring guide magnetic field on colliding effects, 12:12181 (RA;SU;In Russian)
Optimization
Investigation of the dependence of the ErFI electron storage ring main parameters on the periodicity cell structure, 12:12182 (RA;SU;In Russian)
Space Charge
Space charge effects in the UNK, 12:12187 (RA;SU;In Russian)

Superconducting Magnets
VENUS superconducting thin solenoid magnet, 12:12174 (RA;US)
STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE
STORES
See COMMERCIAL BUILDINGS
STOVER
See AGRICULTURAL WASTES
STRAINS
Mathematical Models
General finite strain tensors, 12:12866 (R;US)
Two-Dimensional Calculations
Finite strain measures, 12:12865 (R;US)
STRANGE PARTICLES
See also F MESONS
Particle Production
A study of strange and strangeonium states produced in LASS [Large Aperture Superconducting Solenoid], 12:12639 (R;US)
STRATEGIC DEFENSE INITIATIVE
See BALLISTIC MISSILE DEFENSE
STRATIFIED CHARGE ENGINES
Combustion
Three dimensional numerical simulations of the UPS-292-SC engine, 12:11583 (R;US)
Three-Dimensional Calculations
Three dimensional numerical simulations of the UPS-292-SC engine, 12:11583 (R;US)
STRAW
Cost Benefit Analysis
Economic competitive power of alternative energy systems for farmsteads, 12:11570 (R;DK;In Danish)
Paper
Energy and chemical recovery by straw pulp manufacturing, 12:11569 (R;DK;In Danish)
STREPTOCOCCUS
Cloning
Plasmid vector for cloning in Streptococcus pneumoniae and strategies for enrichment for recombinant plasmids, 12:12361 (J;NL)
Structure of a conjugative element in Streptococcus pneumoniae, 12:12355 (J;US)
Genetic Engineering
Cloning and physical characterization of chromosomal conjugative elements in streptococci, 12:12356 (J;US)
Genetic Mapping
Cloning and physical characterization of chromosomal conjugative elements in streptococci, 12:12356 (J;US)
Structure of a conjugative element in Streptococcus pneumoniae, 12:12355 (J;US)
STRESSES
Mechanics.
Computerized Simulation
Stress concentrations due to sliding grain boundaries in creeping alloys, 12:12875 (J;US)
STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Quantization
Stochastic quantization of gravity and string fields, 12:12895 (R;AT)
Supersymmetry
World-sheet supersymmetry, 12:12665 (J;US)
STRONG INTERACTIONS
Multiplicity
Possible manifestation of quark-gluon plasma in multiplicity distributions from high-energy reactions, 12:12662 (J;US)
Quantum Chromodynamics
Physics of the quark-gluon plasma, 12:12663 (J;US)
STRONTIUM
Adsorption
Nuclear waste chemistry, 12:12559 (RA;US)
Crystal Structure
Separations chemistry, 12:11785 (RA;US)
Infrared Spectra
Separations chemistry, 12:11785 (RA;US)
Solvent Extraction
Separations chemistry, 12:11785 (RA;US)
Synergism
Separations chemistry, 12:11785 (RA;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
STRONTIUM 85
Adsorption
Chemical characterization, leach, and adsorption studies of solidified low-level wastes, 12:10979 (R;US)
STRONTIUM 90
Atom Transport
Partitioning of cesium in phases produced by grouted waste injection, 12:10962 (J;US)
Coprecipitation
Concentration and separation of selected radionuclides from water samples by coprecipitation, 12:11773 (RA;CS;In Czech)
Encapsulation
Fabrication of three 2500-watt (thermal) strontium-90 heat sources, 12:11500 (BA;US)
Radioecological Concentration
Strontium-90 and cesium-137 in sea fish (from June 1982 to December 1982). Environmental and dietary materials, 12:12335 (RA;JP)
Strontium-90 and cesium-137 in vegetables (consuming districts) (from September 1982 to December 1982). Environmental and dietary materials, 12:12306 (RA;JP)
Radioecology
Comparative behavior of three long-lived radionuclides in forest ecosystems, 12:12299 (R;US)
Sorption
Engineered sorbent barriers for low-level waste disposal, 12:10951 (R;US)
STRUCTURAL MATERIALS
See BUILDING MATERIALS
STRUCTURES (BUILDINGS)

SUCROSE
See SACCHAROSE
SUGAR
See SACCHAROSE

SUGAR CANE
Carbon Dioxide Fixation
Carbon (^{14}C) flux in the soil/plant/atmosphere system of sugar cane, 12:12363 (RA;BR;In Portuguese)
Cultivation Techniques
Utilization of ^{15}N-urea by ratoon sugar-cane in the coastal plains of Pernambuco, Brazil, 12:12436 (RA;BR;In Portuguese)
Utilization of ^{15}N-urea by ratoon sugar-cane in the coastal plains of Pernambuco, Brazil, 12:12449 (RA;BR;In Portuguese)
Plant Growth
Residual effect on sugar cane ratoon of urea nitrogen foliar application to plant cane, 12:12521 (RA;BR;In Portuguese)
Productivity
Residual effect on sugar cane ratoon of urea nitrogen foliar application to plant cane, 12:12442 (RA;BR;In Portuguese)
Radiation Induced Mutants
Induction of mutation, through gamma rays, in sugarcane, 12:12480 (RA;BR;In Portuguese)
Induction of mutation, through gamma rays, in sugarcane, 12:12494 (RA;BR;In Portuguese)
SULFATE-REDUCING BACTERIA
Nitrogen Fixation
Nitrogen fixation by Desulfovibrio gigas and other species of Desulfovibrio, 12:12383 (BA;US)
SULFATES
See also AMMONIUM SULFATES
CALCIUM SULFATES
CESIUM SULFATES
LITHIUM SULFATES
POTASSIUM SULFATES
SODIUM SULFATES
TANTALUM SULFATES
Corrosive Effects
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)
SULFITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Crystal Growth
Calcium sulfite and calcium sulfate crystallization: Volume 1, Effect of crystallizer type on gypsum size distribution: Final report, 12:11183 (R;US)
Crystallization
Calcium sulfite and calcium sulfate crystallization: Volume 1, Effect of crystallizer type on gypsum size distribution: Final report, 12:11183 (R;US)
Calcium sulfite and calcium sulfate crystallization: Volume 2, Kinetics of calcium sulfite crystallization and predictions of crystal-size distribution: Final report, 12:11184 (R;US)
SULFONATES
For salts of sulfonic acids; for esters see SULFONIC ACID ESTERS.
Crystal Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_2)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
Molecular Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_2)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
SULFOXIDES
Infrared Spectra
Separations chemistry, 12:11785 (RA;US)
SULFUR
Chemisorption
Surface diffusion of chemisorbed sulfur on nickel(111), 12:11855 (J;NL)
Diffusion
Surface diffusion of chemisorbed sulfur on nickel(111), 12:11855 (J;NL)
Ion Implantation
Surface analysis and electrochemical studies of sulfur enhanced corrosion of nickel, 12:11869 (R;US)
Nuclear Reaction Analysis
Iron and sulfur determination in coal using reaction (n,γ) and BGO scintillator, 12:11757 (RA;CS;In Czech)
Oxidation
Surface analysis and electrochemical studies of sulfur enhanced corrosion of nickel, 12:11869 (R;US)
Recovery
A process for the removal of sulphur compounds from gas mixtures, 12:10882 (TG;GB)
Sorption
Sorption of fuel-bound contaminants for coal and CWM-fired gas turbine systems, 12:10811 (RA;US)
SULFUR 32
Charge Density
Transition densities of charge in sup(16,18)O and sup(32,34)S isotopes, 12:12704 (RA;SU;In Russian)
SULFUR 34
Charge Density
Transition densities of charge in sup(16,18)O and sup(32,34)S isotopes, 12:12704 (RA;SU;In Russian)
SULFUR 35
Beta Decay
Searches for heavy neutrino in beta-decay, 12:12633 (R;SU)
Metabolism
^{35}S utilization in bean crops inoculated with species of mycorhiza, 12:12369 (RA;BR;In Portuguese)
SULFUR 36 TARGET
Triton Reactions
/sup 36/S(t,pγ)/sup 38/S reaction, 12:12709 (J;US)
SULFUR 38
Energy Levels
/sup 36/S(t,pγ)/sup 38/S reaction, 12:12709 (J;US)
SULFUR DIOXIDE
EPA (Environmental Protection Agency) LIMB (Limestone Injection Multistage Burner) development and demonstration program status report (April 1985). Report for February 1985-June 1986, 12:11191 (R;US)
Air Pollution Abatement
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines, 12:10808 (RA;US)
Evaluation of calcium impregnated coal as a fuel for turbine combustors, 12:10806 (RA;US)
Premiums for low-sulfur coal, 12:11189 (RA;US)
Air Pollution Control
Diversity of utility scrub-switch decision factors, 12:11188 (RA;US)
Emission control equipment for residential coal-fire stove: Final project, 12:12245 (R;US)
Flue-gas-cleanup research at Pittsburgh Energy Technology Center, 12:10763 (BA;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 1, 12:11185 (R;US)
Proceedings: Sixth symposium on the transfer and utilization of particulate control technology: Volume 2, 12:11186 (R;US)
Proceedings: 1986 joint symposium on dry SO_2 and simultaneous SO_2/NO/sub x/ control technologies: Volume 1, Sorbents, process research, and dispersion, 12:11187 (R;US)
The Tennessee State Acid Rain (STAR) Project, 12:11438 (R;US)
Atmospheric Chemistry
Processes determining cloudwater composition: Inferences from field measurements, 12:12239 (R;US)
Biological Effects
Effects of ozone and sulfur dioxide mixtures on forest vegetation of the southern Sierra Nevada. Final report, 12:12524 (R;US)
Emission
Modeling for economic and policy analysis of strategies to reduce coal sulfur emissions: Final report, July 1, 1985-February 28, 1986 (Regional analysis; USA), 12:10764 (R;US)
Removal
Direct sorbent injection for combined SO_2/NO/sub x/ removal: Quarterly technical progress report, July-September 1986, 12:10758 (R;US)

Sorption of fuel-bound contaminants for coal-fired gas turbine systems: Final report, 12:11181 (R;US)

SULFUR HYDRIDES
See HYDROGEN SULFIDES

SULFUR OXIDES
See also SULFUR DIOXIDE
Crystal Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Deposition
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Environmental Transport
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Long-Range Transport
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Molecular Structure
Coordination mode of tris(2-pyridyl)carbinol to cobalt(III): crystal structure of $Li[Co\{(2\text{-}py)_3COH\}_2](S_2O_6)_2 \times 10H_2O$, 12:11840 (J;US)
Monitoring
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Spatial Distribution
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
Washout
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)

SULFUR SULFIDES
See SULFUR

SUN
Research Programs
Committee on solar-terrestrial research. Final report, 1 December 1984-30 April 86, 12:12567 (R;US)
Rotation
A review of what numerical simulations tell us about the internal rotation of the sun, 12:12570 (R;US)

SUPERCOMPUTERS
Configuration
First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985). Final Report, 12:12994 (R;US)
Cray Computers
Block-oriented, local-memory-based linear-equation solution on the CRAY-2, 12:12978 (R;US)
Performance Testing
A comparison of the performance of the Caltech Mark 2 hypercube and the Elxsi 6400, 12:12989 (R;US)
Iterative full matrix-vector multiplication on the hypercube, 12:12988 (R;US)
Los Alamos National Laboratory computer benchmarking, 1986, 12:12991 (R;US)
Research Programs
First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985). Final Report, 12:12994 (R;US)

SUPERCONDUCTING CABLES
Energy Losses
Study on dynamic losses in the superconducting cable of the UNK magnets, 12:12189 (RA;SU;In Russian)

SUPERCONDUCTING COILS
Design
Active internal corrector coils, 12:12122 (RA;US)
Develop and test an internally cooled, cabled superconductor (ICCS) for large scale MHD magnets: Analysis report, 12:11484 (R;US)
Materials
Develop and test an internally cooled, cabled superconductor (ICCS) for large scale MHD magnets: Analysis report, 12:11484 (R;US)

SUPERCONDUCTING GENERATORS
Materials Working
Explosive fabrication of multilayer damper shield: Final report, 12:11616 (R;US)
Superconducting Magnets
Development and manufacture of ultra-fine NbTi filament wires at ALSTHOM, 12:11923 (RA;US)

SUPERCONDUCTING JUNCTIONS
See also JOSEPHSON JUNCTIONS
Josephson Effect
Josephson current in low-dimensional proximity systems and the field effect, 12:12879 (J;US)
Research Programs
Artificially structured superconductors: Progress report, 12:11609 (R;US)

SUPERCONDUCTING MAGNETS
Construction
Construction of superconducting quadrupole magnet, 12:12173 (RA;US)
Development of superconducting dipoles and construction of prototypes for HERA at Brown Boveri and Company (BBC), 12:12171 (RA;US)
Magnet design and construction methods, 12:12125 (RA;US)
Plans for industrial production of the SSC magnets, 12:12120 (RA;US)
S.C. correction coils and magnets for the HERA proton ring, 12:12175 (RA;US)
Superconducting quadrupoles for HERA, 12:12172 (RA;US)
VENUS superconducting thin solenoid magnet, 12:12174 (RA;US)
Cooling Systems
CEBAF cryogenic system design, 12:12134 (RA;US)
Central refrigeration system for the superconducting HERA proton magnet ring, 12:12129 (RA;US)
Design of the 4.35 K cryogenic system for SSC, 12:12128 (RA;US)
Development of cryogenic system for UNK, 12:12131 (RA;US)
Discussion on the status of cryogenic technology and future trends, 12:12135 (RA;US)
Experience with operating the Tevatron cryogenic system, 12:12126 (RA;US)
L'Air Liquide's role in the large-scale refrigeration systems required for the next generation of accelerators, 12:12132 (RA;US)
Preliminary study of a superfluid helium cryogenic system for the large hadron collider, 12:12130 (RA;US)
Some aspects of the HERA helium refrigerator, 12:12133 (RA;US)
Cryogenics
CEBAF cryogenic system design, 12:12134 (RA;US)
Design of the 4.35 K cryogenic system for SSC, 12:12128 (RA;US)
Development of cryogenic system for UNK, 12:12131 (RA;US)
Discussion on the status of cryogenic technology and future trends, 12:12135 (RA;US)
Experience with operating the Tevatron cryogenic system, 12:12126 (RA;US)
L'Air Liquide's role in the large-scale refrigeration systems required for the next generation of accelerators, 12:12132 (RA;US)
Preliminary study of a superfluid helium cryogenic system for the large hadron collider, 12:12130 (RA;US)
Some aspects of the HERA helium refrigerator, 12:12133 (RA;US)
Cryostats
SSC dipole long magnet model cryostat design and initial production experience, 12:12127 (RA;US)
Depth Dose Distributions
Calculation of absorbed dose radial distribution at an incidence of light nuclei at 1 mrad angle onto the iron target, 12:12161 (R;SU;In Russian)
Design
Construction and operation of the 12-T superconducting coils for the Mirror Fusion Test Facility, 12:12960 (R;US)

Construction of superconducting quadrupole magnet, 12:12173 (RA;US)
Development of superconducting dipoles for UNK, 12:12079 (RA;US)
Development of superconducting magnets for accelerators, 12:12117 (RA;US)
Field calculation on a strand level for designing future magnets of a small aperture, 12:12116 (RA;US)
High gradient accelerator quadrupole design, 12:12118 (RA;US)
Magnet design and construction methods, 12:12125 (RA;US)
Magnet R & D for the SSC, 12:12078 (RA;US)
Magnet research and development for the CERN large hadron collider, 12:12081 (RA;US)
Magnets for RHIC, 12:12082 (RA;US)
Reduction of iron saturation in cosine theta dipoles, 12:12115 (RA;US)
Requirements of electrical and quench protection systems on magnet design, 12:12123 (RA;US)
S.C. correction coils and magnets for the HERA proton ring, 12:12175 (RA;US)
Superconducting dipole and quadrupole magnets in KEK, 12:12080 (RA;US)
Superconducting cold iron dipole magnet for UNK, 12:12119 (RA;US)
Superconducting quadrupoles for HERA, 12:12172 (RA;US)
VENUS superconducting thin solenoid magnet, 12:12174 (RA;US)

Helium Dilution Refrigeration
Comparison of methods for cryostating superconducting dipole magnets, 12:12186 (RA;SU;In Russian)

JINR Synchrotron
Calculation of absorbed dose radial distribution at an incidence of light nuclei at 1 mrad angle onto the iron target, 12:12161 (R;SU;In Russian)

Magnetic Fields
Accelerator magnetic measurements, 12:12139 (RA;US)
Active internal corrector coils, 12:12122 (RA;US)
Fundamentals of magnetic measurements with illustration from Fermilab experience, 12:12136 (RA;US)
Magnet field quality requirements for the SSC, 12:12114 (RA;US)
Magnetic field measurement with NMR imaging, 12:12138 (RA;US)
Passive correction of persistent current multipoles in superconducting accelerator dipoles, 12:12121 (RA;US)
Production techniques for measuring SSC accelerator magnets, 12:12137 (RA;US)

Magnetometers
Superconducting magnet calibration stand. Construction, 12:12047 (R;SU;In Russian)

Materials
Development and manufacture of ultra-fine NbTi filament wires at ALSTHOM, 12:11923 (RA;US)
Development of cable for HERA dipoles at L.M.I., 12:12097 (RA;US)
Development of bronze route Nb_3Sn superconductors for accelerator magnets, 12:12108 (RA;US)
Fine filament materials for accelerator dipoles and quadrupoles, 12:12092 (RA;US)
Fine filament NbTi superconductive composite, 12:12093 (RA;US)
Large-scale production of HERA-superconductor, 12:12096 (RA;US)
Nb_3Al research and development at LMI and ENEA, 12:12107 (RA;US)
New developments in niobium-titanium superconductors, 12:12084 (RA;US)
Niobium-tin wire development according to the ECN powder method, 12:12106 (RA;US)
Predominance of the bronze-processed compound superconductors, 12:12943 (RA;US)
Recent advances in the commercial scale production of Nb-46.5wt%Ti alloy, 12:12090 (RA;US)
Recent developments of various superconducting cables for accelerators, 12:12094 (RA;US)
Superconducting wire and cable for big accelerators, 12:12095 (RA;US)
Superconductor development and future trends, 12:12109 (RA;US)
Survey of high field superconducting materials for accelerator magnets, 12:12085 (RA;US)
Teledyne's historical contribution to developing superconductivity, 12:12088 (RA;US)

Performance
Development of superconducting dipoles for UNK, 12:12079 (RA;US)
S.C. correction coils and magnets for the HERA proton ring, 12:12175 (RA;US)

Performance Testing
Superconducting dipole and quadrupole magnets in KEK, 12:12080 (RA;US)

Power Supplies
Requirements of electrical and quench protection systems on magnet design, 12:12123 (RA;US)

Quenching
1.8K conditioning (non-quench training) of a model SSC dipole, 12:12162 (R;US)
Quench propagation across the copper wedges in SSC dipoles, 12:12075 (R;US)
Study of quench processes in UNK magnets, 12:12124 (RA;US)

Refrigerating Machinery
Central refrigeration system for the superconducting HERA proton magnet ring, 12:12129 (RA;US)

Research Programs
Magnet R & D for the SSC, 12:12078 (RA;US)

Storage Rings
Comparison of methods for cryostating superconducting dipole magnets, 12:12186 (RA;SU;In Russian)
Requirements to field nonlinearity in the UNK superconducting magnets, 12:12188 (RA;SU;In Russian)
Simulation of the UNK superconducting dipole magnets, 12:12185 (RA;SU;In Russian)

Superconducting Coils
Develop and test an internally cooled, cabled superconductor (ICCS) for large scale MHD magnets: Analysis report, 12:11484 (R;US)

Superconducting Wires
Composite superconductors for UNK magnets, 12:12086 (RA;US)
Development of high field superconductors at BBC, 12:12105 (RA;US)
Device for precision dimensional measurement of superconducting cable, 12:12112 (RA;US)
Discussion on measurements on superconductors, 12:12113 (RA;US)
Electrophysical and structural properties of multifilamentary superconducting niobium-titanium wire, 12:12087 (RA;US)
Fabrication of new superconductors, 12:12102 (RA;US)
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Indigenous development of A-15 superconductors through in situ technique, 12:12103 (RA;US)
NbTi superconductors for accelerator magnets: large-scale production for HERA and development of fine filament conductors, 12:12099 (RA;US)
Niobium-titanium wire for the HERA correction coils, 12:12098 (RA;US)
Present status of development of Nb_3Sn wires for high energy particle accelerators, 12:12101 (RA;US)
Procedures for measuring the electrical properties of superconductors for accelerator magnets, 12:12110 (RA;US)
S.C.K./C.E.N. critical current set-up, 12:12111 (RA;US)
State of the art in fine filament NbTi superconductors at IGC, 12:12091 (RA;US)
Superconducting properties of fine filamentary superconducting wires, 12:12100 (RA;US)

SUPERCONDUCTING SUPER COLLIDER

Radiation Detectors
Diffractive production of W, Z, top, + ??? at the SSC, 12:12198 (R;US)

Spectrometers
Small angle spectrometers: Summary, 12:12199 (R;US)
Superconducting Magnets
Design of the 4.35 K cryogenic system for SSC, 12:12128 (RA;US)
Device for precision dimensional measurement of superconducting cable, 12:12112 (RA;US)
Fine filament materials for accelerator dipoles and quadrupoles, 12:12092 (RA;US)
Magnet field quality requirements for the SSC, 12:12114 (RA;US)
Magnet R & D for the SSC, 12:12078 (RA;US)
Plans for industrial production of the SSC magnets, 12:12120 (RA;US)
Production techniques for measuring SSC accelerator magnets, 12:12137 (RA;US)
SSC dipole long magnet model cryostat design and initial production experience, 12:12127 (RA;US)
State of the art in fine filament NbTi superconductors at IGC, 12:12091 (RA;US)

SUPERCONDUCTING WIRES
Critical Current
Discussion on measurements on superconductors, 12:12113 (RA;US)
S.C.K./C.E.N. critical current set-up, 12:12111 (RA;US)
Current Density
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Dimensions
Device for precision dimensional measurement of superconducting cable, 12:12112 (RA;US)
Electrical Properties
Procedures for measuring the electrical properties of superconductors for accelerator magnets, 12:12110 (RA;US)
Fabrication
Composite superconductors for UNK magnets, 12:12086 (RA;US)
Development and manufacture of ultra-fine NbTi filament wires at ALSTHOM, 12:11923 (RA;US)
Development of cable for HERA dipoles at L.M.I., 12:12097 (RA;US)
Development of high field superconductors at BBC, 12:12105 (RA;US)
Fabrication of new superconductors, 12:12102 (RA;US)
Fine filament materials for accelerator dipoles and quadrupoles, 12:12092 (RA;US)
Fine filament NbTi superconductive composite, 12:12093 (RA;US)
Indigenous development of A-15 superconductors through in situ technique, 12:12103 (RA;US)
Large-scale production of HERA-superconductor, 12:12096 (RA;US)
NbTi superconductors for accelerator magnets: large-scale production for HERA and development of fine filament conductors, 12:12099 (RA;US)
Niobium-titanium wire for the HERA correction coils, 12:12098 (RA;US)
Present status of development of Nb_3Sn wires for high energy particle accelerators, 12:12101 (RA;US)
Recent developments of various superconducting cables for accelerators, 12:12094 (RA;US)
State of the art in fine filament NbTi superconductors at IGC, 12:12091 (RA;US)
Superconducting wire and cable for big accelerators, 12:12095 (RA;US)
Superconducting properties of fine filamentary superconducting wires, 12:12100 (RA;US)
Survey of high field superconducting materials for accelerator magnets, 12:12085 (RA;US)
Heat Treatments
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Materials
Development of cable for HERA dipoles at L.M.I., 12:12097 (RA;US)
Physical Properties
Electrophysical and structural properties of multifilamentary superconducting niobium-titanium wire, 12:12087 (RA;US)
Superconductivity
Composite superconductors for UNK magnets, 12:12086 (RA;US)

SUPERCONDUCTORS
Critical Field
Unusual temperature dependence of the upper critical field in superconducting heavy-fermion systems, 12:12880 (J;US)
Electronic Specific Heat
Itinerant f-electron model of heavy-fermion systems, 12:12881 (J;US)
Electron-Phonon Coupling
Itinerant f-electron model of heavy-fermion systems, 12:12881 (J;US)
Thin Films
Superconductivity of thin-film inatermetallic compounds. Annual technical report, 1 September 1985-31 August 1986, 12:11707 (R;US)

SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERFUND
Remedial Action
Mobile treatment technologies for superfund wastes, 12:12294 (R;US)

SUPERGRAVITY
Gauge Invariance
Normal gauge in N=1 supergravity, 12:12891 (R;SU;In Russian)
Invariant Imbedding
Normal gauge in N=1 supergravity, 12:12891 (R;SU;In Russian)
Solitons
Exact superpartners of N = 2 supergravity solitons, 12:12897 (R;AT)
Symmetry Breaking
Use of compensators to break supersymmetry in an N = 1 supergravity theory, 12:12680 (J;NL)

SUPERHEATERS
Bypasses
Modeling of alternative steam bypass systems for hot restarts, 12:11142 (RA;US)
Materials
AR and TD Fossil Energy Materials Program: Quarterly progress report for the period ending September 30, 1986, 12:10694 (R;US)
Welded Joints
Dissimilar-weld failure analysis and development program: Volume 3, Accelerated discriminatory tests: Final report, 12:11119 (R;US)

SUPERHETERODYNE RECEIVERS
See HETERODYNE RECEIVERS

SUPERLATTICES
Design
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
Elasticity
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Fabrication
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
Reviews
Recent trends in III—V strained layer research, 12:11735 (J;US)
Strains
Effect of strain on the elastic properties of superlattices, 12:11645 (J;US)
Valence
Recent trends in III—V strained layer research, 12:11735 (J;US)

SUPERNOVAE
Nucleosynthesis
Some nuclear data needs in astrophysics, 12:12575 (BA;US)

Reviews
Theoretical and observational review of results on nova explosions occurring on ONeMg white dwarfs, 12:12569 (R;US)
SUPERSYMMETRY
World-sheet supersymmetry, 12:12665 (J;US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTS
See also FOUNDATIONS
Seismic Effects
Reserve strength as a measure of fragility, 12:11381 (RA;US)
SURFACE MINING
Land Reclamation
Western surface mine permitting and reclamation, 12:10766 (R;US)
Permits
Western surface mine permitting and reclamation, 12:10766 (R;US)
SURFACES
Configuration
Wavepacket approach to gas-surface scattering: application to surfaces with imperfections, 12:12876 (J;NL)
Roughness
Surface roughness data analysis, 12:11931 (RA;US)
Sorptive Properties
Wavepacket approach to gas-surface scattering: application to surfaces with imperfections, 12:12876 (J;NL)
Tribology
Surface roughness data analysis, 12:11931 (RA;US)
SURVEILLANCE (RADIOACTIVITY)
See RADIATION MONITORING
SURVEY (RADIOACTIVITY)
See RADIATION MONITORING
SUSPENSIONS
See also SLURRIES
Fluid Flow
Rheology of concentrated suspensions of solid spheres, 12:11979 (RA;US)
Rheology
Rheology of concentrated suspensions of solid spheres, 12:11979 (RA;US)
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWEDEN
Cogeneration
Combined heat and power production in local communities. Production, potential, prognoses, 12:11455 (R;SE;In Swedish)
Ground Water
Ground water quality, 12:12326 (R;SE;In Swedish)
SWITCHES
See also PLASMA SWITCHES
Computerized Control Systems
Electronic logic to enhance switch reliability in detecting openings and closures of redundant switches, 12:12010 (P;US)
Logic Circuits
Electronic logic to enhance switch reliability in detecting openings and closures of redundant switches, 12:12010 (P;US)
Reliability
Electronic logic to enhance switch reliability in detecting openings and closures of redundant switches, 12:12010 (P;US)
SWITCHING CIRCUITS
Seismic Effects
Overview of relay and auxiliary component seismic fragility, 12:11398 (RA;US)
SWITZERLAND
Radioactive Waste Disposal
Swiss nuclear projects: Concepts and overview of the Project Guarantee 1985, 12:10941 (R;CH;GE)
SYMBIOTIC STARS
Objects whose spectra have characteristics of disparate spectral classes.
Ultraviolet Radiation
Combined ultraviolet studies of astronomical sources. Semiannual Progress report, 1 February-31 July 1986, 12:12571 (R;US)
SYNCHROCYCLOTRONS
See also CERN SYNCHROCYCLOTRON
Decommissioning
Shielding calculations at dismantled synchrocyclotron, 12:12314 (R;US)
Radiometric Surveys
Shielding calculations at dismantled synchrocyclotron, 12:12314 (R;US)
Superconducting Magnets
Composite superconductors for UNK magnets, 12:12086 (RA;US)
Development of cryogenic system for UNK, 12:12131 (RA;US)
Study of quench processes in UNK magnets, 12:12124 (RA;US)
Superconducting cold iron dipole magnet for UNK, 12:12119 (RA;US)
SYNCHROPHASOTRONS
See SYNCHROTRONS
SYNCHROTRON RADIATION
Reviews
Electron- and photon-stimulated desorption: probes of structure and bonding at surfaces, 12:11831 (J;US)
SYNCHROTRONS

Design
General features of accelerator magnets, 12:12077 (RA;US)
Electron Beams
New generation of electron accelerators for nuclear physics, 12:12042 (RA;SU;In Russian)
Performance
General features of accelerator magnets, 12:12077 (RA;US)
Superconducting Magnets
General features of accelerator magnets, 12:12077 (RA;US)
SYNOVIA
See BONE JOINTS
SYNROC PROCESS
Operating procedures for the manufacture of radioactive SYNROC in the Actinide Laboratory, 12:11915 (R;AU)
SYNTHESIS GAS
Bioconversion
Biological production of fuels from coal derived gases: Quarterly report, September 20, 1986 to December 20, 1986, 12:10722 (R;US)
Indirect liquefaction of coal via biosynthesis, 12:11008 (R;US)
SYNTHETASES
See LIGASES
SYNTHETIC FUELS
See also PYROLYTIC OILS
Chemical Composition
Catalytic hydrotreating of biomass liquefaction products to produce hydrocarbon fuels: Interim report, 12:11002 (R;US)
Production
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 1, Project overview: Final report, 12:10993 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 2, A kinetic study of the modified Fischer-Tropsch synthesis over an alumina-supported cobalt oxide catalyst: Final report, 12:10994 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 3, Supervisory control system development for an indirect liquefaction process: Final report, 12:10995 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 5, Microwave heating of fluidized bed reactors:

Pyrolysis and calcination applications: Final report, 12:10997 (R;US)
Conversion of cellulosic wastes to liquid hydrocarbon fuels: Vol. 6, The modeling and design of a staged indirect liquefaction reactor: Final report, 12:10998 (R;US)

SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

SYSTEM FAILURE ANALYSIS
Validation
Problems, issues and techniques in validating a fault tolerant system for reactor control, 12:11265 (RA;US)

T

TADPOLES
See AMPHIBIANS

TAMM-DANCOFF METHOD
Interacting Boson Model
Modified Tamm-Dancoff method for determination of microscopic structure of α boson and interacting boson model parameters, 12:12799 (RA;SU;In Russian)

TANDEM MIRROR DEVICES
See TMR REACTORS

TANDEM MIRROR TYPE REACTORS
See TMR REACTORS

TANK FARMS
See STORAGE FACILITIES

TANKS
Performance Testing
Leak tightness testing of underground tank systems, 12:12295 (R;US)

TANTALUM
Elasticity
Determination of elastic constants in matals by ultrasonic resonance method, 12:11634 (R;SU;In Russian)
Surface Cleaning
Performance of mechanical scraping tools in ultrahigh vacuum: an XPS study, 12:11679 (J;NL)
Surface Properties
Synchrotron radiation photoemission studies of CO chemisorption on Pt/Ta(110) and Ni/Ta(110), 12:11602 (R;US)
Ultrasonic Testing
Determination of elastic constants in matals by ultrasonic resonance method, 12:11634 (R;SU;In Russian)

TANTALUM 180
Nucleosynthesis
Isomeric levels in /sup 180/Lu and the nucleosynthesis of /sup 180/Ta/sup m/, 12:12735 (J;US)
Search for the beta decay of /sup 180/Lu to /sup 180/Hf/sup m/, 12:12734 (J;US)

TANTALUM 181 TARGET
Neon 20 Reactions
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)

TANTALUM CARBIDES
Chlorination
Application of gamma spectrometry in studying tantalum carbide chlorination, 12:11774 (RA;CS;In Czech)

TANTALUM SULFATES
Debye-Waller Factor
Inelastic scattering in condensed matter with high intensity Moessbauer radiation: Progress report for period March 1, 1986-October 31, 1986, 12:12861 (R;US)

TANTALUM SULFIDES
Resonance Scattering
Inelastic scattering in condensed matter with high intensity Moessbauer radiation. Progress report, March 1-October 31, 1986, 12:12863 (R;US)

TAR SAND OIL
See BITUMENS

TAR SANDS
See OIL SANDS

TATB
Detonations
Modeling particle size and initial temperature effects on shock initiation of TATB-based explosives, 12:12218 (BA;NL)

TAU LEPTONS
See TAU PARTICLES

TAU PARTICLES
Radiative Decay
Polarization phenomena in the heavy lepton radiative decay, tau → ν+π+γ, 12:12658 (R;SU;In Russian)

TAUONS
See TAU PARTICLES

TEA
See BEVERAGES

TEARING INSTABILITY
Excitation
Self-excitation of the ballooning tearing mode and the nature of anomalous transport in toroidal magnetic confinement systems, 12:12914 (R;US)

TECHNETIUM
Adsorption
Nuclear waste chemistry, 12:12559 (RA;US)
Solubility
Nuclear waste chemistry, 12:12559 (RA;US)

TECHNETIUM COMPLEXES
Electron Transfer
Electron-transfer reactions of technetium complexes. 1. Rate of the self-exchange reaction of the Tc(I)/Tc(II) couple [Tc(DMPE)$_3$/sup +/2+/, where DMPE = 1,2-bis(dimethylphosphino)ethane, 12:11836 (J;US)

TECHNICAL SPECIFICATIONS
See SPECIFICATIONS

TEKTITES
Activation Analysis
Neutron and gamma activation analysis of moldavites and microtectites, 12:11760 (RA;CS;In Czech)

TELLURIUM 128
Energy Levels
Investigation of γ-radiation from the sup(128)(n,n'γ) reaction, 12:12717 (RA;SU;In Russian)
Multipole Transitions
Investigation of γ-radiation from the sup(128)(n,n'γ) reaction, 12:12717 (RA;SU;In Russian)

TELLURIUM 128 TARGET
Neutron Reactions
Investigation of γ-radiation from the sup(128)(n,n'γ) reaction, 12:12717 (RA;SU;In Russian)

TELLURIUM 132
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Radiochemical characterization of Chernobyl fallout in Europe, 12:12269 (RA;US)

TEMPERATURE DISTRIBUTION
F Codes
Subcooled sprays in a vapor environment: Tests of the two-fluid model for two-phase flow: Progress report for period May 15, 1986 to December 31, 1986, 12:11988 (R;US)

TEMPERATURE MEASUREMENT
Equipment
[In-Situ Heat Transfer Experiment (ISHTE): Final report on contract 52-5769, 12:10954 (R;US)

TENNESSEE
Fossil-Fuel Power Plants
Bull Run Fossil Plant toxicity biomonitoring study, 12:12526 (R;US)
Ground Subsidence
Inventory of karst subsidence in the Valley and Ridge Province of East Tennessee, 12:10926 (R;US)
Water Reservoirs
Fishery status assessment of Tims Ford Reservoir with management recommendations, 12:12340 (R;US)
Gallatin Steam-Electric Plant: Paddlefish investigations: Progress report, 12:11192 (R;US)

John Sevier Aquatic Biological Program: Paddlefish stocking and assessment report for 1986, 12:12341 (R;US)
The biological effects of bank stabilization structures on fish and benthic macroinvertebrates in Fort Loudoun Lake: Final report, 12:12342 (R;US)

TENNESSEE VALLEY REGION
Energy Source Development
Energy 86: Today's opportunities for partnerships, 12:11456 (R;US)

TERBIUM 159 TARGET
Deuteron Reactions
Study on 7.3 GeV deuteron interaction with the ^{93}Nb, ^{159}Tb, ^{202}Pb, sup(207,2)Pb and ^{209}Bi nuclei, 12:12720 (R;SU;In Russian)

TERRESTRIAL BACKGROUND
See BACKGROUND RADIATION

TERTIARY RECOVERY
See ENHANCED RECOVERY

TEST FACILITIES
Diagnostic Techniques
Diagnostic development and support of MHD test facilities: Technical progress report for the period January, February, March 1985, 12:11481 (R;US)
Maintenance
Operation and maintenance of DOE/PETC Combustion Test Facilities: Quarterly technical progress report for the period July 1, 1986 to September 30, 1986 (PETC), 12:10825 (R;US)
Operation
Operation and maintenance of DOE/PETC Combustion Test Facilities: Quarterly technical progress report for the period July 1, 1986 to September 30, 1986 (PETC), 12:10825 (R;US)
Planning
Advanced diesel research engine test facility for DOE Morgantown, 12:10818 (RA;US)

TEVATRON
See FERMILAB TEVATRON

TEXAS
Urban Areas
Warrants for interconnection of isolated traffic signals. Research report, September 1079-August 1986 (Final), 12:11550 (R;US)

THERMAL ENERGY STORAGE EQUIPMENT
Aquifers
Aquifer thermal energy storage district cooling in downtown St. Paul: Feasibility study, 12:11417 (R;US)
Design
Lessons learned from a membrane stratified thermal storage system, 12:11419 (BA;US)
Operation
Impact of operation and control strategy on the performance of a thermal energy storage system, 12:11545 (BA;US)
Performance
Impact of operation and control strategy on the performance of a thermal energy storage system, 12:11545 (BA;US)
Performance Testing
Test and calculation methods used in Denmark for solar collectors, heat storages and solar heating systems, 12:11082 (R;DK)
Temperature Control
Impact of operation and control strategy on the performance of a thermal energy storage system, 12:11545 (BA;US)
Thermal Efficiency
Lessons learned from a membrane stratified thermal storage system, 12:11419 (BA;US)

THERMAL INSULATION
Building Materials
Insulation materials for buildings, with good fire resistance, based on novolaque type phenolic resins in the form of reinforced foams, 12:11520 (R;FR;In French)
Economic Analysis
Profitability of energy saving measures in existing residential buildings, 12:11543 (R;FI;In Finnish)
Energy Conservation
Profitability of energy saving measures in existing residential buildings, 12:11543 (R;FI;In Finnish)
Layers
Comparison between the conventional and the inverted additional insulation of the flat roofs. 2 Ed. , 12:11526 (R;DK;In Danish)
Thermal Conductivity
Analysis of experimental determinations of the thermal conductivity of CBCF [carbon-bonded carbon fiber] insulation (Carbon-bonded carbon fiber), 12:11725 (R;US)

THERMAL NEUTRONS
Neutron Diffusion Equation
Thermal hydraulic and neutronic interaction in the rotating bed reactor, 12:11234 (D;US)

THERMAL POLLUTION (AIR)
See AIR POLLUTION

THERMAL POLLUTION (WATER)
See WATER POLLUTION

THERMAL POWER PLANTS

OCEAN THERMAL POWER PLANTS
REFUSE-FUELED POWER PLANTS
SOLAR THERMAL POWER PLANTS
WOOD-FUEL POWER PLANTS
Availability
Modular redundancy concepts: problems and solutions, 12:11168 (RA;US)
Computerized Control Systems
Applications of nonlinear controller design approach based on quasilinear system models, 12:11301 (RA;US)
Control-C and ACSL for computer-aided control systems engineering, 12:11299 (RA;US)
Control system design and compensation with a signal-processing microprocessor, 12:11172 (RA;US)
CUTLASS DDC language, 12:11295 (RA;US)
Fault-diagnosis in microcomputer based systems, 12:11169 (RA;US)
Modular redundancy concepts: problems and solutions, 12:11168 (RA;US)
Nonlinear control system design based on quasalinear system models, 12:11302 (RA;US)
Recent advances in linear multivariable control design, 12:11303 (RA;US)
Recovery techniques in a distributed power systems environment, 12:11170 (RA;US)
Software summaries, 12:11298 (RA;US)
Systematic nonlinear controller design approach based on quasilinear system models, 12:11300 (RA;US)
Construction
Minor thermal power station Vaernamo 7 MW/sub/(e)/15 MW/sub/(v)/, 12:11176 (R;SE;In Swedish)
Cost Estimation
Costs of district heating plants using wood and peat fuels, 12:10831 (R;FI;In Finnish)
Droughts
Strategies for coping with drought: Volume 1, Problem identification: Final report, 12:11472 (R;US)
Economics
Coal products and their utilization, 12:10693 (R;FI;In Finnish)
Possibilities to utilize field screening for milled peat, 12:10784 (R;FI;In Finnish)
Fuels
Coal products and their utilization, 12:10693 (R;FI;In Finnish)
Materials Handling
Possibilities to utilize field screening for milled peat, 12:10784 (R;FI;In Finnish)
Planning
Minor thermal power station Vaernamo 7 MW/sub/(e)/15 MW/sub/(v)/, 12:11176 (R;SE;In Swedish)
System Failure Analysis
Fault-diagnosis in microcomputer based systems, 12:11169 (RA;US)
Recovery techniques in a distributed power systems environment, 12:11170 (RA;US)

THERMAL RADIATION
Cumulative Radiation Effects
Cumulative thermal effects in a multiburst scenario. Master's thesis, 12:12223 (R;US)
THERMAL STORAGE
See HEAT STORAGE
THERMIC DIODE SOLAR PANELS
Design
Liquid convective diode retrofit of Bolling Air Force Base housing unit, 12:11078 (BA;US)
Uses
Liquid convective diode retrofit of Bolling Air Force Base housing unit, 12:11078 (BA;US)
THERMIONIC CONVERSION
Investigation of material problems for high-temperature, high-power space energy-conversion systems. Final report, 1 May 1983-30 May 1986, 12:11599 (R;US)
THERMIONIC DIODES
Operation
Vacuum pulse conditioning and risetime sharpening on a low nu/gamma multi-MEV electron beam accelerator, 12:12168 (BA;US)
THERMIONIC EMITTERS
Study of the enhanced thermionic emission of molybdenum, hafnium and zirconium due to dispenser-cathode exposure. Final report, September 1982-September 1985, 12:11598 (R;US)
Work Functions
Investigation of material problems for high-temperature, high-power space energy-conversion systems. Final report, 1 May 1983-30 May 1986, 12:11599 (R;US)
THERMISTORS
Uses
Application of heated thermistors to speed measurements in thermohaline solutions, 12:11086 (J;GB)
THERMODYNAMIC CYCLES
Comparative Evaluations
Screening evaluation of advanced power cycles: Final report (Fuel cells, potassium vapor, sulfur vapor, biphenyl vapor, etc.), 12:12018 (R;US)
THERMOELECTRIC CELLS
See THERMOELECTRIC GENERATORS
THERMOELECTRIC CONVERTERS
See THERMOELECTRIC GENERATORS
THERMOELECTRIC GENERATORS
Radioisotope Heat Sources
Fabrication of three 2500-watt (thermal) strontium-90 heat sources, 12:11500 (BA;US)
Sealed Sources
Fabrication of three 2500-watt (thermal) strontium-90 heat sources, 12:11500 (BA;US)
Ultrasonic Testing
Ultrasonic examination techniques for multicouple thermoelectric subcomponents and assemblies: Status report, 12:12001 (R;US)
THERMOGRAPHY
Evaluation of commercially available coating techniques for application of thermographic phosphor to nickel-based alloys, 12:11625 (R;US)
THERMOLUMINESCENT DOSEMETERS
Readout Systems
Optical readout method for solid-state dosemeters, 12:12514 (R;US)
THERMONUCLEAR REACTOR MATERIALS
Mechanical Properties
Mechanical property measurements on ion-irradiated metals, 12:11638 (R;US)
Phase Studies
Tritium in Pd and Pd /SUB 0.80/ Ag /SUB 0.20/ , 12:11654 (BA;US)
Thermal Conductivity
Determination of thermal conductivity from specific heat and thermal diffusivity measurements of plasma-sprayed cermets, 12:12967 (J;US)
THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also PULSED FUSION REACTORS
TOKAMAK TYPE REACTORS
Breeding Blankets
Conceptual design and neutronics analyses of a fusion reactor blanket simulation facility, 12:12968 (D;US)
Commercialization
Prospects for developing attractive magnetic fusion concepts, 12:12965 (J;US)
Feasibility Studies
Prospects for developing attractive magnetic fusion concepts, 12:12965 (J;US)
Limiters
Limiter, 12:12964 (P;US)
Research Programs
Prospects for developing attractive magnetic fusion concepts, 12:12965 (J;US)
Reviews
Magnetic fusion energy research: A summary of accomplishments, 12:12909 (R;US)
THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS
THERMOPLASTICS
Compatibility
Effects of solvent exposures on poly(etheretherketone) (PEEK) and PEEK-fiberglass composites, 12:11719 (R;US)
Lithium
Lithium traces determination in thermoplastic rubber, 12:11759 (RA;CS;In Czech)
Wear
Determination of the wear of thermoplastic journal bearings in the initial strain, 12:11722 (R;AT)
THIN FILMS
Ion Collisions
Extreme-ultraviolet beam-foil spectroscopy of highly ionized neon and argon. Doctoral thesis, 12:12583 (R;US)
Microstructure
Mechanisms for the deposition of thin metallic films by laser driven gas phase reactions, 12:11816 (R;US)
Radiation Doses
Effects of backing plates on the electron exposure of thin polymer films, 12:12205 (R;US)
Superconductivity
Superconductivity of thin-film inatermetallic compounds. Annual technical report, 1 September 1985-31 August 1986, 12:11707 (R;US)
Vapor Phase Epitaxy
Mechanisms for the deposition of thin metallic films by laser driven gas phase reactions, 12:11816 (R;US)
THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS
THIONAPHTHENES
Biodegradation
Microbial removal of organic sulfur from coal: Quarterly project status report, September 15 to December 15, 1986 (Benzothiophene and dibenzothiophene), 12:10723 (R;US)
Deuteration
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, July 15-October 15, 1986, 12:10724 (R;US)
THIOPHENOLS
Desulfurization
Analysis of products from reactions of chemisorbed monolayers at smooth platinum electrodes: electrochemical hydrodesulfurization of thiophenol derivatives, 12:11793 (J;US)
Gas Chromatography
Analysis of products from reactions of chemisorbed monolayers at smooth platinum electrodes: electrochemical hydrodesulfurization of thiophenol derivatives, 12:11793 (J;US)
Liquid Column Chromatography
Analysis of products from reactions of chemisorbed monolayers at smooth platinum electrodes: electrochemical hydrodesulfurization of thiophenol derivatives, 12:11793 (J;US)

THORIUM
Delayed Neutron Analysis
Simultaneous determination of uranium and thorium by delayed neutrons, using different relations between fast and thermal neutron flux, 12:11784 (R;BR;In Portuguese)
Resonance Ionization Mass Spectroscopy
Assessment of resonance ionization mass spectrometry for analytical chemistry and spectroscopy, 12:11898 (J;GB)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
THORIUM 228
Radioecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Radioecology
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
THORIUM 232
Fission Fragments
Fission channel analysis for /sup 232/Th(n,f), 12:12750 (BA;US)
THORIUM 232 TARGET
Alpha Reactions
Extreme asymmetric fission of nuclei produced in thorium bombarding by alpha particles and deuterons, 12:12743 (RA;SU;In Russian)
Deuteron Reactions
Extreme asymmetric fission of nuclei produced in thorium bombarding by alpha particles and deuterons, 12:12743 (RA;SU;In Russian)
Fission Fragments
Fission channel analysis for /sup 232/Th(n,f), 12:12750 (BA;US)
Neutron Reactions
Fission channel analysis for /sup 232/Th(n,f), 12:12750 (BA;US)
Measurements and calculations of neutron scattering in the actinide region, 12:12824 (J;US)
Uranium 238 Reactions
Search for correlated narrow-peak structure in the two-photon spectrum from 6-MeV/nucleon U+Th collisions, 12:12748 (J;US)
THORIUM COMPOUNDS
See also THORIUM OXIDES
Photoelectron Spectroscopy
Photoelectron spectra of metal tetrakis(methyltrihydroborates) and thorium tetrakis(tetrahydroborate), 12:11897 (J;US)
Reduction
Surface composition-reactivity relationships in heterogeneous catalysis: Progress report, 12:11810 (R;US)
THORIUM D
See LEAD 208
THORIUM IONS
Chemical Reaction Kinetics
Rate Constants for Reactions of Radiation-Produced Transients in Aqueous Solutions of Actinides, 12:11886 (J;US)
THORIUM OXIDES
Isotope Ratio
Simultaneous determination of uranium and thorium by delayed neutrons, using different relations between fast and thermal neutron flux, 12:11784 (R;BR;In Portuguese)
THREE MILE ISLAND-2 REACTOR
Dauphin County, Pennsylvania, USA
Environmental Impacts
Programmatic environmental impact statement related to decontamination and disposal of radioactive wastes resulting from March 28, 1979 accident, Three Mile Island Nuclear Station, Unit 2 (Docket No. 50-320): Draft, 12:11377 (R;US)
Reactor Accidents
Programmatic environmental impact statement related to decontamination and disposal of radioactive wastes resulting from March 28, 1979 accident, Three Mile Island Nuclear Station, Unit 2 (Docket No. 50-320): Draft, 12:11377 (R;US)
THREE-BODY PROBLEM
Hamiltonians
Three-body effective interaction within fsub(7/2) nuclear shell, 12:12786 (RA;SU)
Numerical Solution
Nuclear reaction studies: Progress report, 12:12762 (R;US)
THYMUS
Radiation Injuries
Thymic hormones in thymus recovery from radiation injury, 12:12465 (R;US)
THYROID
Activation Analysis
Basic study of selected trace elements in thyroid using NAA, 12:11763 (RA;CS;In Czech)
Preparation of thyroid tissues for trace element determination by NAA, 12:11762 (RA;CS;In Czech)
Sample Preparation
Preparation of thyroid tissues for trace element determination by NAA, 12:11762 (RA;CS;In Czech)
TIBER-X TOKAMAK
Current-Drive Heating
TIBER II: Tokamak Ignition/Burn Experimental Reactor: 1986 status report, 12:12956 (R;US)
Design
TIBER II: Tokamak Ignition/Burn Experimental Reactor: 1986 status report, 12:12956 (R;US)
TIGHT SANDS
See SANDSTONES
TIN 112 TARGET
Nickel 58 Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
Nickel 64 Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
TIN 113
Excited States
High-lying one-particle states in tin isotopes, 12:12791 (RA;SU;In Russian)
TIN 116 TARGET
Neutron Reactions
Nuclear data for production of /sup 117m/Sn for biomedical application, 12:12727 (BA;US)
TIN 117
Electron Emission
Nuclear data for production of /sup 117m/Sn for biomedical application, 12:12727 (BA;US)
Excited States
High-lying one-particle states in tin isotopes, 12:12791 (RA;SU;In Russian)
Synthesis
Nuclear data for production of /sup 117m/Sn for biomedical application, 12:12727 (BA;US)
TIN 117 TARGET
Neutron Reactions
Nuclear data for production of /sup 117m/Sn for biomedical application, 12:12727 (BA;US)
TIN 120 TARGET
Pion Minus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
Pion Plus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
TIN 121
Excited States
High-lying one-particle states in tin isotopes, 12:12791 (RA;SU;In Russian)
TIN 124 TARGET
Nickel 58 Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
Nickel 64 Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
TIN 125
Excited States
High-lying one-particle states in tin isotopes, 12:12791 (RA;SU;In Russian)

TIN ALLOYS
See also ZIRCALOY
Current Density
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Fabrication
Development of high field superconductors at BBC, 12:12105 (RA;US)
Development of bronze route Nb_3Sn superconductors for accelerator magnets, 12:12108 (RA;US)
Fabrication of new superconductors, 12:12102 (RA;US)
Indigenous development of A-15 superconductors through in situ technique, 12:12103 (RA;US)
Niobium-tin wire development according to the ECN powder method, 12:12106 (RA;US)
Predominance of the bronze-processed compound superconductors, 12:12943 (RA;US)
Present status of development of Nb_3Sn wires for high energy particle accelerators, 12:12101 (RA;US)
Superconductor development and future trends, 12:12109 (RA;US)
Heat Treatments
Improved Nb_3Sn superconductor wire for high field applications, 12:12104 (RA;US)
Magnetic Susceptibility
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors. Ph.D. Thesis, 12:11618 (R;NL;In Dutch)
Superconductivity
Investigation of three ferromagnetic superconductors in the milli-Kelvin area. Ph.D. Thesis, 12:11619 (R;NL;In Dutch)
Survey of high field superconducting materials for accelerator magnets, 12:12085 (RA;US)
TIN CHLORIDES
Synthesis
Insertion of $SnCl_2$ into an Os-Os bond of $Os_3(CO)_{11}(\mu\text{-}CH_2)$ to give the planar cluster $Os_3SnCl_2(CO)_{11}(\mu\text{-}CH_2)$ with a pentacoordinate tin atom, 12:11838 (J;US)
TIN ISOTOPES

TIN 125
Nickel 58 Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
Nickel 64 Reactions
Fission following fusion of Ni+Sn, 12:12723 (J;US)
TIN SULFIDES
Magnetic Susceptibility
Magnetic susceptibility observation of removing oxygen from some chevrel compounds, 12:11739 (J;US)
TISSUE-EQUIVALENT DETECTORS
Calorimetric dose measurements and calorimetric system developed for the Armed Forces Radiobiology Research Institute. Contract report, 12:12194 (R;US)
TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Crystal Structure
Chemistry of transuranium elements and compounds, 12:11892 (RA;US)
TITANIUM
Chemical Bonds
EXAFS evidence for direct metal-metal bonding in reduced Rh/TiO_2 catalysts, 12:11843 (J;US)
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Materials Testing
The effects of SO_2 scrubber chemistry on corrosion: Final report, 12:11182 (R;US)
Photoelectron Spectroscopy
Characterization of a titanium-promoted supported platinum electrocatalyst, 12:11796 (J;US)
X-Ray Diffraction
Characterization of a titanium-promoted supported platinum electrocatalyst, 12:11796 (J;US)
TITANIUM ALLOYS
See also ALLOY-A-286
ALLOY-IN-100
TITANIUM BASE ALLOYS
Corrosion
Effect of n-implantation on the corrosive-wear properties of surgical Ti-6Al-4V alloy, 12:11675 (J;US)
Fabrication
Development and manufacture of ultra-fine NbTi filament wires at ALSTHOM, 12:11923 (RA;US)
Development of cable for HERA dipoles at L.M.I., 12:12097 (RA;US)
Fine filament NbTi superconductive composite, 12:12093 (RA;US)
Large-scale production of HERA-superconductor, 12:12096 (RA;US)
NbTi superconductors for accelerator magnets: large-scale production for HERA and development of fine filament conductors, 12:12099 (RA;US)
Niobium-titanium wire for the HERA correction coils, 12:12098 (RA;US)
Recent developments of various superconducting cables for accelerators, 12:12094 (RA;US)
State of the art in fine filament NbTi superconductors at IGC, 12:12091 (RA;US)
Superconducting properties of fine filamentary superconducting wires, 12:12100 (RA;US)
Superconductor development and future trends, 12:12109 (RA;US)
Microstructure
New developments in niobium-titanium superconductors, 12:12084 (RA;US)
Oxidation
Interdisciplinary approach to predictive modeling of structural adhesive bonding. Characterization of Ti-6Al-4V oxides and the adhesive/oxide interphase. Semi-annual report No. 88, September 1985-March 1986, 12:11597 (R;US)
Physical Properties
Mass production of superconducting materials Nb and NbTi, 12:12089 (RA;US)
Production
Mass production of superconducting materials Nb and NbTi, 12:12089 (RA;US)
Recent advances in the commercial scale production of Nb-46.5wt%Ti alloy, 12:12090 (RA;US)
Teledyne's historical contribution to developing superconductivity, 12:12088 (RA;US)
Superconductivity
Electrophysical and structural properties of multifilamentary superconducting niobium-titanium wire, 12:12087 (RA;US)
Survey of high field superconducting materials for accelerator magnets, 12:12085 (RA;US)
Technology Assessment
New developments in niobium-titanium superconductors, 12:12084 (RA;US)
Wear Resistance
Effect of n-implantation on the corrosive-wear properties of surgical Ti-6Al-4V alloy, 12:11675 (J;US)
TITANIUM BASE ALLOYS
Atomization
Rapidly solidified prealloyed powders by laser spin atomization, 12:11672 (J;US)
Crack Propagation
Limits of applicability of models predicting initiation of crack growth for surface cracks, 12:11604 (RA;US)
Hydridation
Evidence of FCC titanium hydride formation in β titanium alloy: An X-ray diffraction study, 12:11647 (J;US)
TITANIUM BORIDES
Hot Pressing
Processing and microstructural characterization of TiB_2 liquid phase sintered with Ni and Ni_3Al, 12:11701 (J;US)

Sintering
Processing and microstructural characterization of TiB_2 liquid phase sintered with Ni and Ni_3Al, 12:11701 (J;US)

TITANIUM COMPLEXES
Chemical Preparation
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)
Structural Chemical Analysis
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of $\{ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]\}_2$, 12:11864 (J;US)

TITANIUM HYDRIDES
Electronic Structure
Theory of electronic states in disordered alloy hydrides, 12:11695 (BA;US)
Phase Transformations
Evidence of FCC titanium hydride formation in β titanium alloy: An X-ray diffraction study, 12:11647 (J;US)
X-Ray Diffraction
Evidence of FCC titanium hydride formation in β titanium alloy: An X-ray diffraction study, 12:11647 (J;US)

TITANIUM NITRIDES
Electronic Structure
TiN/sub x/$(0.6 < x < 1.2)$: atomic arrangements, electronic structure, and recent results on crystal growth and physical properties of epitaxial layers, 12:11698 (BA;US)
Physical Properties
TiN/sub x/$(0.6 < x < 1.2)$: atomic arrangements, electronic structure, and recent results on crystal growth and physical properties of epitaxial layers, 12:11698 (BA;US)

TITANIUM OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction: Quarterly report number 9 for the period September 1, 1986 to November 30, 1986, 12:10721 (R;US)
Materials chemistry, 12:11723 (RA;US)
Reduction
EXAFS evidence for direct metal-metal bonding in reduced Rh/TiO_2 catalysts, 12:11843 (J;US)
Structural Chemical Analysis
EXAFS evidence for direct metal-metal bonding in reduced Rh/TiO_2 catalysts, 12:11843 (J;US)
Surface Cleaning
Performance of mechanical scraping tools in ultrahigh vacuum: an XPS study, 12:11679 (J;NL)

TITANIUM SULFIDES
Electrochemistry
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)
Structural Chemical Analysis
Structural and thermodynamic properties of cointercalated titanium disulfide, 12:11737 (J;US)
Thermodynamic Properties

TOROIDAL PINCH DEVICES
Albedo
Variable control of neutron albedo in toroidal fusion devices, 12:12963 (P;US)
Neutron Flux
Variable control of neutron albedo in toroidal fusion devices, 12:12963 (P;US)
Vacuum Systems
Variable control of neutron albedo in toroidal fusion devices, 12:12963 (P;US)

TOROIDAL PINCH TYPE REACTORS
See TOROIDAL PINCH DEVICES

TOWER FOCUS POWER PLANTS
See also BARSTOW SOLAR PILOT PLANT
Solar Heat Engines
Heat engine development for solar thermal dish-electric power plants, 12:11069 (BA;US)
TOXIC MATERIALS
Environmental Exposure Pathway
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Environmental Transport
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Mathematical Models
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Risk Assessment
Application of multimedia pollutant transport models to risk analysis, 12:12263 (BA;US)
Screening
Research and development of hazardous/toxic waste analytical screening procedures. Available field methods for rapid screening of hazardous-waste materials at waste sites. Final report, December 1981-December 1982, 12:11436 (R;US)
Waste Disposal
Research and development of hazardous/toxic waste analytical screening procedures. Available field methods for rapid screening of hazardous-waste materials at waste sites. Final report, December 1981-December 1982, 12:11436 (R;US)
TRACE ELEMENTS
See ELEMENTS
TRACER TECHNIQUES
Labelled Compounds
Preparation of labelled compounds for tracer investigations in industry, 12:11893 (RA;DD;In German)
TRACKS
See PARTICLE TRACKS
TRADE
Forecasting
Marine transport costs and coal trade, 12:10835 (R;GB)
TRANSBOUNDARY POLLUTION
See TRANSFRONTIER POLLUTION
TRANSFER (ELECTRON)
See ELECTRON TRANSFER
TRANSFER (HEAT)
See HEAT TRANSFER
TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
TRANSFER (MASS)
See MASS TRANSFER
TRANSFORMER OILS
See INSULATING OILS
TRANSFORMERS
Insulating Oils
Polychlorinated dibenzofurans (PCDF) and polychlorinated dibenzo-p-dioxins (PCDD) in utility transformers and capacitors: Volume 1, Formation of PCDF and PCDD in askarels and contaminated mineral oil equipment: Final report, 12:11200 (R;US)
TRANSFRONTIER POLLUTION
For nonradioactive pollution only; for radioactive contamination use TRANSFRONTIER CONTAMINATION.
Mathematical Models
Import and export of acid pollution in the Netherlands, 12:12234 (R;NL;DU)
TRANSIENT OVERPOWER ACCIDENTS
Three-Dimensional Calculations
Efficient numerical solution procedure for light water reactor core dynamics, 12:11232 (D;US)
TRANSIENT SPECIES
See REACTION INTERMEDIATES
TRANSITION ELEMENTS
See also CHROMIUM
COBALT
COPPER
GOLD
HAFNIUM
IRON
MANGANESE
MOLYBDENUM
NICKEL
NIOBIUM
RHENIUM
SILVER
TANTALUM
TECHNETIUM
TITANIUM
TUNGSTEN
VANADIUM
YTTRIUM
ZIRCONIUM
X-Ray Spectroscopy
Improved determination of backscattering amplitude and phase shift functions, 12:11749 (R;US)
TRANSITION METALS
See TRANSITION ELEMENTS
TRANSMISSION (ENERGY)

GAMMA TRANSPORT THEORY
NEUTRON TRANSPORT THEORY
Compton Effect
Relativistic photon-Maxwellian electron cross sections, 12:12664 (BA;US)
Kinetic Equations
Abstract kinetic equations relevant to supercritical media, 12:12903 (J;US)
Stationary transport processes with unbounded collision operators, 12:12907 (J;NL)
TRANSPORTATION SECTOR
Energy Consumption
Energy use in transport: Data report (New Zealand), 12:11454 (R;NZ)
Fuel Substitution
US Department of Energy, fossil energy research and development program, 12:10793 (RA;US)
TRANSURANIUM ELEMENTS
See also NEPTUNIUM
PLUTONIUM
Nuclear decay data: Some applications and needs, 12:12695 (BA;US)
Isotope Production
Transuranium isotopes, 12:11324 (RA;US)
TRANSURANIUM WASTES
See ALPHA-BEARING WASTES
TRAUMA
See INJURIES
TRAUMATIC SHOCK
See INJURIES
TREATIES
Compliance
Soviet noncompliance, 12:11589 (R;US)
TREES
See also FRUIT TREES
HEVEA
PINES
WILLOWS
Harvesting
Horse bunching of small trees from thinnings, 12:11048 (R;DK;In Danish)
Nitrogen Fixation
Utilization of photosynthate for nitrogen fixation in seedlings of Myrica gale and Alnus rubra, 12:12380 (BA;US)

1,3,5-TRIAMINO-2,4,6-TRINITROBENZENE
See TATB
TRIBOLIUM
Biological Radiation Effects
Study of the combined effects of nitrogen gas and gamma radiation on Tribolium Confusum, 12:12509 (RA;SY;In French and Arabic)
TRICHLOROMETHANE
See CHLOROFORM
TRIGA-2-RIKKYO REACTOR
Research Programs
Cooperative utilization of Rikkyo University Reactor (RUR), 12:11323 (RA;MY)
TRIGA-BRAZIL REACTOR
Reactor Control Systems
Auxiliary control system of the safety parameters for IPR-R1 reactor, 12:11307 (R;BR;In Portuguese)
Reactor Operation
Auxiliary control system of the safety parameters for IPR-R1 reactor, 12:11307 (R;BR;In Portuguese)
TRIPLET PARTICLES
See QUARKS
TRISTAN PROJECT
See TRISTAN STORAGE RINGS
TRISTAN STORAGE RINGS
Transposable Ring Intersecting STorage Accelerators in Nippon.
Superconducting Magnets
Construction of superconducting quadrupole magnet, 12:12173 (RA;US)
TRITICUM
See WHEAT
TRITIUM
Binding Energy
Nuclear three-body problem and energy-dependent potentials, 12:12808 (R;SU;In Russian)
Breeding Blankets
Variation of neutron yield from a titanium-tritide target during deuterium beam bombardment, 12:12939 (R;AU)
Chemical Reaction Kinetics
Reaction of T_2 and O_2 gas: a model, 12:11894 (J;US)
Electron Reactions
Calculation of electromagnetic observables in few-body systems, 12:12636 (R;US)
Environmental Transport
An analysis of groundwater contamination from the operation of a 6-GeV continuous electron beam accelerator, 12:12332 (R;US)
Isotope Production
Production of tritium and /sup 4/He in a large cylinder of /sup 6/LiD irradiated with 14-MeV neutrons and comparison with Monte Carlo calculations, 12:12700 (J;US)
Isotope Ratio
Ground Water movement in crystalline rock aquifers (State of Ceara, Brazil), 12:12284 (R;BR;In Portuguese)
Radiolysis
Reaction of T_2 and O_2 gas: a model, 12:11894 (J;US)
Solubility
Tritium in Pd and Pd /SUB 0.80/ Ag /SUB 0.20/ , 12:11654 (BA;US)
TRITIUM TARGET
Neutron Reactions
Production of tritium and /sup 4/He in a large cylinder of /sup 6/LiD irradiated with 14-MeV neutrons and comparison with Monte Carlo calculations, 12:12700 (J;US)
TRITON REACTIONS
Two-Nucleon Transfer Reactions
/sup 36/S(t,pγ)/sup 38/S reaction, 12:12709 (J;US)
TRITONS
Binding Energy
Studies of the three-nucleon system properties using the interpolating amplitude scattering function, 12:12817 (R;SU)
Photonuclear Reactions
Calculation of electromagnetic observables in few-body systems, 12:12636 (R;US)
TRIUMF CYCLOTRON
Cavity Resonators
Third harmonic flattopping in the TRIUMF rf cavity, 12:12074 (R;CA)
Computerized Control Systems
High level extensions to the TRIUMF central control system, 12:12164 (R;CA)
Harmonics
Third harmonic flattopping in the TRIUMF rf cavity, 12:12074 (R;CA)
Ion Sources
An intense ion source for H^- cyclotrons, 12:12165 (R;CA)
Leaks
Control of rf leakage in the TRIUMF cyclotron, 12:12072 (R;CA)
Radiowave Radiation
Control of rf leakage in the TRIUMF cyclotron, 12:12072 (R;CA)
TRI-UNIVERSITY MESON FACILITY
See TRIUMF CYCLOTRON
TROJAN REACTOR
Prescott, Oregon, USA
Electric Generators
Trial application of reliability technology to emergency diesel generators at the Trojan Nuclear Power Plant, 12:11219 (R;US)
TROMBE WALLS
Apartment Buildings
BLAST - Calculation of temperature and energy consumption in Vesterbo (Passive solar heating in renovated apartment buildings, Denmark), 12:11074 (R;DK;In Danish)
TROUT
Ecology
Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (Pacific Northwest): Steelhead trout (Salmo gairdneri), 12:12322 (R;US)
Migration
Juvenile salmonid monitoring at Rock Island Dam bypass sampler: Annual report, 12:12337 (R;US)
TRU WASTES
See ALPHA-BEARING WASTES
TRX-1
See REVERSE-FIELD PINCH
TSL PROCESS
Yields
Run 249 with Wyodak coal. Technical progress report, 12:10712 (R;US)
Wilsonville Advanced Coal Liquefaction Research and Development Facility, Wilsonville, Alabama. Run 248 with Illinois No. 6 coal. Technical progress report, 12:10711 (R;US)
TSUKUBA KEK SYNCHROTRON
See KEK SYNCHROTRON
TSURUGA REACTOR
Tsuruga, Fukui, Japan
Fuel Cans
In cell measurements of crud and corrosion of BWR and HWR fuels at reef, JAERI, 12:11216 (RA;XA)
TSURUGA-1 REACTOR
See TSURUGA REACTOR
TSURUGA-2 REACTOR
Fuel Cans
In cell measurements of crud and corrosion of BWR and HWR fuels at reef, JAERI, 12:11216 (RA;XA)
TUBERS
See also POTATOES
Radurization
Possibility of using gamma irradiation in the preservation of 'mangara' Xanthosoma mafafa (Schott.), 12:12457 (RA;BR;In Portuguese)
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Cracks
Circumferential cracking of supercritical boiler water-wall tubes: Final report, 12:11155 (R;US)
Stability
Nonlinear stability control and secondary bifurcation, 12:11927 (RA;US)

TUBES (CONDUITS)
See PIPES
TUFF
Chemical Composition
Chemistry of diagenetically altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nye County, Nevada, 12:12558 (R;US)
Diagenesis
Chemistry of diagenetically altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nye County, Nevada, 12:12558 (R;US)
Radioactive Waste Disposal
Corrosion processes of austenitic stainless steels and copper-based materials in gamma-irradiated aqueous environments, 12:11652 (BA;US)
Radionuclide Migration
Assessment of radionuclide vapor-phase transport in unsaturated tuff, 12:10943 (R;US)
Spatial Distribution
Tioga Bentonite in the Appalachian Basin: Final report, 12:12534 (R;US)
TUMORS
See NEOPLASMS
TUNGSTEN
Sputtering
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)
TUNGSTEN 168
Energy-Level Transitions
Separation and identification of the short-lived isotopes of tungsten from products of the $^{154}Gd + {}^{20}Ne$ reaction, 12:12732 (R;SU;In Russian)
TUNGSTEN 169
Energy-Level Transitions
Separation and identification of the short-lived isotopes of tungsten from products of the $^{154}Gd + {}^{20}Ne$ reaction, 12:12732 (R;SU;In Russian)
TUNGSTEN 183
Energy-Level Transitions
Inelastic scattering in condensed matter with high intensity Moessbauer radiation: Progress report for period March 1, 1986-October 31, 1986, 12:12861 (R;US)
Resonance Absorption
Inelastic scattering in condensed matter with high intensity Moessbauer radiation. Progress report, March 1-October 31, 1986, 12:12863 (R;US)
TUNGSTEN ALLOYS
See also TUNGSTEN BASE ALLOYS
Thermionic Emission
Investigation of material problems for high-temperature, high-power space energy-conversion systems. Final report, 1 May 1983-30 May 1986, 12:11599 (R;US)
TUNGSTEN BASE ALLOYS
Chemical Preparation
Hard metal composition, 12:11643 (P;US)
Hardness
Hard metal composition, 12:11643 (P;US)
TUNGSTEN IODIDES
Crystal Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_3)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
Molecular Structure
Structure of iodo(methylene)tetrakis(trimethylphosphine)tungsten trifluoromethane-sulfonate, $[WI(CH_3)\{P(CH_3)_3\}_4][CF_3SO_3]$, 12:11862 (J;DK)
TUNNELS
See also MINE ROADWAYS
Tunnels for developing offshore fields, 12:10871 (RA;NO)
TURBINE BLADES
Aerodynamics
Attempt to evaluate the tip vane concept with a lifting-line model, 12:11113 (R;NL)
Coatings
Characterization of coating processes and coatings for steam turbine blades, 12:11178 (J;US)
Deposits
Study of deposition control using transpiration, 12:10814 (RA;US)
Dynamic Loads
Report on development of wood wings for Aerowatt windmills (Small windmills for battery charging in Greenland), 12:11114 (R;DK;In Danish)
Porous Materials
Study of deposition control using transpiration, 12:10814 (RA;US)
Surface Coating
Characterization of coating processes and coatings for steam turbine blades, 12:11178 (J;US)
Transpiration
Study of deposition control using transpiration, 12:10814 (RA;US)
TURBULENCE
Computerized Simulation
Dimension density: An intensive measure of chaos in spatially extended turbulent systems, 12:12992 (R;US)
Fluid Mechanics
Turbulent energy generated by accelerations and shocks, 12:12613 (R;US)
TURBULENT FLOW
Chemical Reactions
Characterization of chaotic processes, 12:11975 (RA;US)
Heat Transfer
Heat-transfer effects of a longitudinal vortex embedded in a turbulent boundary layer, 12:11976 (RA;US)
Numerical simulations of turbulent heat transfer in the presence of shear, 12:11977 (RA;US)
Numerical Solution
Helical and fractal nature of fully developed turbulence, 12:11973 (RA;US)
TWO-PHASE FLOW
Computerized Simulation
Subcooled sprays in a vapor environment: Tests of the two-fluid model for two-phase flow: Progress report for period May 15, 1986 to December 31, 1986, 12:11988 (R;US)
Flow Models
Two-fluid model simulation of density-wave oscillations in a boiling flow system, 12:11993 (J;US)
Heat Transfer
Transport phenomena in porous media: single and two phase flow, 12:11983 (RA;US)
I Codes
INGEN: A COBRA-NC input generator user's manual, 12:12996 (R;US)
Mathematical Models
Models of disordered media: some new results, including some new connections between composite-media, fluid-state, and random-flight theories, 12:12908 (BA;US)
Temperature Distribution
Subcooled sprays in a vapor environment: Tests of the two-fluid model for two-phase flow: Progress report for period May 15, 1986 to December 31, 1986, 12:11988 (R;US)
Velocity
Subcooled sprays in a vapor environment: Tests of the two-fluid model for two-phase flow: Progress report for period May 15, 1986 to December 31, 1986, 12:11988 (R;US)
Void Fraction
Transport phenomena in porous media: single and two phase flow, 12:11983 (RA;US)

UCLBL
See LAWRENCE BERKELEY LABORATORY

UCLLL
See LAWRENCE LIVERMORE LABORATORY
UFTR REACTOR
Reactor Operation
University of Florida Training Reactor: Annual progress, September 1, 1985-August 31, 1986, 12:11321 (R;US)
ULTRASONIC TESTING
Accuracy
SNLA's [Sandia National Laboratories at Albuquerque] high precision ultrasonic scanning system and synthetic-aperature-focusing technique, 12:12002 (R;US)
Cracks
Effects of crack geometry and material behavior on scattering by cracks for QNDE [quantitative non-destructive evaluation] applications: Technical progress report, March 1, 1986-February 28, 1987 (Quantitative non-destructive evaluation), 12:11998 (R;US)
ULTRASONIC WAVES
Pulse Techniques
Mechanism for the generation of cavitation maxima by pulsed ultrasound, 12:12901 (J;US)
Scattering
Effects of crack geometry and material behavior on scattering by cracks for QNDE [quantitative non-destructive evaluation] applications: Technical progress report, March 1, 1986-February 28, 1987 (Quantitative non-destructive evaluation), 12:11998 (R;US)
Mechanism for the generation of cavitation maxima by pulsed ultrasound, 12:12901 (J;US)
ULTRASONICS
See ULTRASONIC WAVES
UNDERGROUND EXPLOSIONS
Hydrophone investigations of earthquake and explosion generated high-frequency seismic phases. Final report, October 1983-September 1985, 12:12233 (R;US)
Electromagnetic Pulses
The development of diagnostic fuses, 12:12228 (R;US)
Ground Motion
Recovery of MILL RACE ground-motion canisters and examination of canister emplacement. Technical report, 1 October 1982-31 May 1983, 12:12221 (R;US)
UNDERGROUND FACILITIES
See also TUNNELS
WIPP
Construction
Ultra-clean underground counting facility for low-level environmental samples, 12:12301 (R;US)
Design
Ultra-clean underground counting facility for low-level environmental samples, 12:12301 (R;US)
UNDERGROUND GASIFICATION
See IN-SITU GASIFICATION
UNDERGROUND MINING
See also LONGWALL MINING
Dusts
Mineralogical composition of respirable coal dust, 12:10749 (k;CA)
Ground Motion
Computer analysis of the effects of mine subsidence on pipelines, 12:10765 (R;CA)
Ground Subsidence
Computer analysis of the effects of mine subsidence on pipelines, 12:10765 (R;CA)
Rock Bursts
Development and use of a gas outburst reporting form and database for outburst-prone collieries, 12:10772 (R;AU)
Outburst research, 12:10783 (R;AU)
Strata Control
Further development of support technology for service trunk roads and gate roads, 12:10782 (R;XE;In German)
Supports
Further development of support technology for service trunk roads and gate roads, 12:10782 (R;XE;In German)
UNDERWATER FACILITIES
Performance
High tech solutions for future North Sea exploration and exploitation challenges. Offshore Northern Seas. Advanced Projects Conference 1985, Stavanger, Norway, 19-21 November 1985, 12:10841 (R;NO)
UNGLAZED SOLAR COLLECTORS
Performance Testing
Performance of uncovered solar collector, 12:11083 (R;DK)
UNIFIED GAUGE MODELS
See also GRAND UNIFIED THEORY
Chirality
Chiral anomaly and a class of two-loop finite supersymmetric gauge theories, 12:12685 (J;NL)
Symmetry Breaking
Chiral symmetry breaking with octet and sextet quarks, 12:12682 (J;NL)
UNIPOLAR TRANSISTORS
See FIELD EFFECT TRANSISTORS

URANIUM
See also DEPLETED URANIUM
Adsorption
Nuclear waste chemistry, 12:12559 (RA;US)
Delayed Neutron Analysis
Simultaneous determination of uranium and thorium by delayed neutrons, using different relations between fast and thermal neutron flux, 12:11784 (R;BR;In Portuguese)
Market
Impact of exchange rates on the world uranium market, 12:11263 (RA;US)
Resonance Ionization Mass Spectroscopy
Assessment of resonance ionization mass spectrometry for analytical chemistry and spectroscopy, 12:11898 (J;GB)
Resonance ionization mass spectrometry using ion-beam sampling, 12:12860 (R;US)
Sorption
Uranium and radium sorption on amorphous ferric oxyhydroxide, 12:12312 (J;NL)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
URANIUM 235
Gamma Spectroscopy
U-235 enrichment determination via gamma spectroscopy-improved calibration and "unknown" sample assay, 12:10909 (J;US)
Isotope Separation
U-235 enrichment determination via gamma spectroscopy-improved calibration and "unknown" sample assay, 12:10909 (J;US)
Radioecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Radioecology
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Radiometric Analysis
The development of a state-of-the-art assay system for uranium-235 in solutions, 12:11778 (R;US)
Reaction Kinetics
Solid State Track Recorder fission rate measurements at high neutron fluence and high temperature, 12:11239 (R;US)

URANIUM 236
Ternary Fission
Extreme asymmetric fission of nuclei produced in thorium bombarding by alpha particles and deuterons, 12:12743 (RA;SU;In Russian)
URANIUM 238
Radioecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Radioecology
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
URANIUM 238 REACTIONS
Resonance Scattering
Search for correlated narrow-peak structure in the two-photon spectrum from 6-MeV/nucleon U+Th collisions, 12:12748 (J;US)
URANIUM 238 TARGET
Iron 56 Reactions
[Studies of heavy-ion induced reactions]: Annual progress report, 12:12702 (R;US)
Neon 20 Reactions
Linear momentum transfer in 292-MeV ^{20}Ne-induced fission of ^{165}Ho, ^{181}Ta, ^{197}Au, ^{209}Bi, and ^{238}U, 12:12736 (J;US)
Neutron Reactions
Measurements and calculations of neutron scattering in the actinide region, 12:12824 (J;US)
URANIUM ALLOYS
Electron Correlation
Appearance of correlation effects in U intermetallics, 12:11646 (J;US)
Energy-Level Density
Appearance of correlation effects in U intermetallics, 12:11646 (J;US)
URANIUM COMPOUNDS
See also URANIUM OXIDES
URANIUM SILICIDES
Photoelectron Spectroscopy
Photoelectron spectra of metal tetrakis(methyltrihydroborates) and thorium tetrakis(tetrahydroborate), 12:11897 (J;US)
URANIUM DEPOSITS
Exploration
Interpretation of the aeromagnetic data covering portion of the Damara orogenic belt, with special reference to the occurrence of uraniferous granite, 12:10908 (R;ZA)
Geologic Surveys
Geologic and geotechnical contributions to the Lagoa da Rabicha and Cachoeira mines projects, Lagoa Real, State of Bahia, Brazil, 12:10905 (R;BR;In Portuguese)
Geologic and geotechnical contributions to the Itataia mine project, State of Ceara, Brazil , 12:10906 (R;BR;In Portuguese)
Hydrology
Hydrogeologic characterization of the Cachoeira Deposit Massif, Caetite, state of Bahia, Brazil, 12:10902 (R;BR;In Portuguese)
Metamorphism
Metamorphism, metasomatism and mineralization at Lagoa Real, Bahia, Brazil (Uranium deposits), 12:10900 (R;BR)
Mineralization
Metamorphism, metasomatism and mineralization at Lagoa Real, Bahia, Brazil (Uranium deposits), 12:10900 (R;BR)
Seismic Surveys
Seismic refraction technique applications in the geotechnical characterization of the Cachoeira deposit massif, Caetite, State of Bahia, Brazil, 12:10904 (R;BR;In Portuguese)
Stratigraphy
Interpretation of the aeromagnetic data covering portion of the Damara orogenic belt, with special reference to the occurrence of uraniferous granite, 12:10908 (R;ZA)
URANIUM DIOXIDE
Diffusion
Cation interdiffusion in the UO_2-(U, Pu)O_2 and UO_2 - PuO_2 systems 12:10911 (R;BR;In Portuguese)
Fission Product Release
Combined grain-boundary and lattice diffusion in fine-grained ceramics, 12:11310 (BA;US)
Fission-product release from UO/sub 2/ under LWR-accident conditions: Recent data compared with review values, 12:11413 (BA;US)
Grain Boundaries
Combined grain-boundary and lattice diffusion in fine-grained ceramics, 12:11310 (BA;US)
Raman Spectra
Special topics, 12:11724 (RA;US)
URANIUM HEXAFLUORIDE
Separation Nozzle Method
Researches on uranium enrichment carried out in Centro de Desenvolvimento da Tecnologia Nuclear, 12:11781 (R;BR;In Portuguese)
URANIUM IONS
Chemical Reaction Kinetics
Rate Constants for Reactions of Radiation-Produced Transients in Aqueous Solutions of Actinides, 12:11886 (J;US)
URANIUM MINES
Economic Analysis
Mining planning introduction, 12:10907 (R;BR)
Ground Disposal
Hazardous waste on public lands, 12:12297 (J;US)
Hydrology
Superficial drainage studies in open-pit mines (Caldas uranium mine, Brazil), 12:10903 (R;BR;In Portuguese)
Planning
Mining planning introduction, 12:10907 (R;BR)
Radioactive Wastes
Hazardous waste on public lands, 12:12297 (J;US)
Surface Waters
Superficial drainage studies in open-pit mines (Caldas uranium mine, Brazil), 12:10903 (R;BR;In Portuguese)
URANIUM ORES
Exploration
Mining planning introduction, 12:10907 (R;BR)
URANIUM OXIDES
See also URANIUM DIOXIDE
URANIUM OXIDES U3O8
Absorption Spectroscopy
Determination of metallic impurities in nuclearly pure uranium compounds by electrothermal spectrophotometry, 12:11783 (R;BR;In Portuguese)
Use of electrothermal atomization for determining metallic impurities in nuclearly pure uranium compounds, 12:11782 (R;BR;In Portuguese)
Impurities
Determination of metallic impurities in nuclearly pure uranium compounds by electrothermal spectrophotometry, 12:11783 (R;BR;In Portuguese)
Use of electrothermal atomization for determining metallic impurities in nuclearly pure uranium compounds, 12:11782 (R;BR;In Portuguese)
URANIUM OXIDES U3O8
Isotope Ratio
Simultaneous determination of uranium and thorium by delayed neutrons, using different relations between fast and thermal neutron flux, 12:11784 (R;BR;In Portuguese)
URANIUM RESERVES
Mining planning introduction, 12:10907 (R;BR)
Forecasting
Ore reserve estimation: a summary of principles and methods, 12:10901 (R;BR)
URANIUM SILICIDES
Differential Thermal Analysis
Differential thermal analysis of U/sub 3/Si-Al and U/sub 3/Si/sub 2/-Al reactions, 12:10910 (J;US)
Electron Correlation
Appearance of correlation effects in U intermetallics, 12:11646 (J;US)
Energy-Level Density
Appearance of correlation effects in U intermetallics, 12:11646 (J;US)

URBAN AREAS
Planning
Energy conscious plan for a residential area, 12:11523 (R;FI;In Finnish)
Vehicles
Warrants for interconnection of isolated traffic signals. Research report, September 1079-August 1986 (Final), 12:11550 (R;US)

UREA
Foliar Uptake
Effects of urea foliar application and of ammonium sulphate and urea applied to the soil on yield and N utilization by beans (Phaseolus vulgaris L.), 12:12437 (RA;BR;In Portuguese)
Effects of urea foliar application and of ammonium sulphate and urea applied to the soil on yield and N utilization by beans (Phaseolus vulgaris L.), 12:12451 (RA;BR;In Portuguese)
Residual effect on sugar cane ratoon of urea nitrogen foliar application to plant cane, 12:12442 (RA;BR;In Portuguese)
Root Absorption
Effects of urea foliar application and of ammonium sulphate and urea applied to the soil on yield and N utilization by beans (Phaseolus vulgaris L.), 12:12451 (RA;BR;In Portuguese)
Uptake
Fate of ^{15}N-urea and ^{15}N-ammonium sulphate applied in different periods to Cica-8 rice culture in greenhouse conditions, 12:12447 (RA;BR;In Spanish)
Utilization of ^{15}N-urea by ratoon sugar-cane in the coastal plains of Pernambuco, Brazil, 12:12449 (RA;BR;In Portuguese)

Forecasting
Saving in costs in the electric power generating sector by introducing wind power, 12:11173 (R;NL;DU)
Investment
Saving in costs in the electric power generating sector by introducing wind power, 12:11173 (R;NL;DU)
Research Programs
Meteorology and Wind Energy Department annual progress report 1 January-31 December 1985, 12:11103 (R;DK)
National wind energy development program 1981-1984. Inventory of executed projects and results, 12:11101 (R;NL;In Dutch)
Reviews
Evaluation of the national wind energy development program NOW-2, phase 1, 12:11102 (R;NL;In Dutch)

WIND TURBINE ARRAYS
Shadow Effect
Influence from local terrain obstacles on the energy production by wind turbines, 12:11104 (R;DK;In Danish)

WIND TURBINES
See also HORIZONTAL AXIS TURBINES
VERTICAL AXIS TURBINES
Aerodynamics
Aerodynamics control of wind turbines, 12:11107 (RA;GB)
Aerodynamic control aspects of HAWTG design, 12:11108 (RA;GB)
Changes in aerofoil characteristics due to radial flow on rotating blades, 12:11110 (RA;GB)
Development of stall on horizontal axis rotors, 12:11111 (RA;GB)
General discussion, 12:11112 (RA;GB)
Rotor aerodynamics of horizontal axis wind turbines. Summary of lectures and discussions. Presentation of results of calculation methods, 12:11116 (R;NL;In Dutch)
Boundary Layers
Aerodynamics control of wind turbines, 12:11107 (RA;GB)
Control
Aerodynamics control of wind turbines, 12:11107 (RA;GB)
Aerodynamic control aspects of HAWTG design, 12:11108 (RA;GB)
General discussion, 12:11112 (RA;GB)
Cost Benefit Analysis
Economic competitive power of alternative energy systems for farmsteads, 12:11570 (R;DK;In Danish)
Lectures
Rotor aerodynamics of horizontal axis wind turbines. Summary of lectures and discussions. Presentation of results of calculation methods, 12:11116 (R;NL;In Dutch)
Mathematical Models
Attempt to evaluate the tip vane concept with a lifting-line model, 12:11113 (R;NL)
Rotor aerodynamics of horizontal axis wind turbines. Summary of lectures and discussions. Presentation of results of calculation methods, 12:11116 (R;NL;In Dutch)
Proceedings
General discussion, 12:11112 (RA;GB)
Shadow Effect
Influence from local terrain obstacles on the energy production by wind turbines, 12:11104 (R;DK;In Danish)
Turbine Blades
Changes in aerofoil characteristics due to radial flow on rotating blades, 12:11110 (RA;GB)

WINDOWS
Surface Contamination
Analysis of surface contaminants on beryllium windows, 12:12076 (R;US)

WIND-POWERED PUMPS
Wind-mechanical pumps only; for wind-electric pumps use WIND TURBINES and PUMPS.
Economic Analysis
Prospects for small and marginal farmers in Trichy district (Tamil Nadu, India) to use water pumping windmills for irrigation, 12:11105 (R;NL)

WINE
See BEVERAGES

WIPP
Posttest analysis of a laboratory-cast monolith of salt-saturated concrete. Final report, 12:10920 (R;US)
Waste Isolation Pilot Plant: Annual hydrogeologic data report, 1985/1986, 12:10931 (R;US)
Design
Waste Isolation Pilot Plant design validation: Final report, 12:10932 (R;US)
Waste Isolation Pilot Plant design validation: Final report, Appendices, 12:10933 (R;US)
Geology
Bibliography of reports by US Geological Survey personnel on studies at the Nevada Test Site and the Waste Isolation Pilot Plant Site, New Mexico, January 1, 1985 to December 31, 1985 (Reports by US GS), 12:10956 (R;US)
Radioactive Waste Management
Bibliography of reports by US Geological Survey personnel on studies at the Nevada Test Site and the Waste Isolation Pilot Plant Site, New Mexico, January 1, 1985 to December 31, 1985 (Reports by US GS), 12:10956 (R;US)
Sealing Materials
Development and implementation: Test Series B of the small-scale seal performance tests, 12:11730 (R;US)

WOLFRAM
See TUNGSTEN

WOOD
Acid Hydrolysis
Effective pretreatment alternatives for the production of ethanol from hemicellulosic hardwood hydrolyzates, 12:11012 (R;US)
Chemical Composition
Mineral content of wood in selected Tennessee Valley hardwoods, 12:11056 (R;US)
Combustion
Monitoring the heat output of a wood-burning stove, 12:11016 (J;US)
Fermentation
Effective pretreatment alternatives for the production of ethanol from hemicellulosic hardwood hydrolyzates, 12:11012 (R;US)
Moisture
Storage of bundled unlimed pulpwood and logging residues, 12:11015 (R;SE;In Swedish and English)
Storage
Storage of bundled unlimed pulpwood and logging residues, 12:11015 (R;SE;In Swedish and English)

WOOD ALCOHOL
See METHANOL

WOOD BURNING APPLIANCES
Flue Gas
Mass flow and temperature measurements in the flue of a woodburning appliance, 12:11517 (R;US)
Heat Transfer
Monitoring the heat output of a wood-burning stove, 12:11016 (J;US)
Mathematical Models
Monitoring the heat output of a wood-burning stove, 12:11016 (J;US)
Monitoring
Monitoring the heat output of a wood-burning stove, 12:11016 (J;US)
Temperature Measurement
Mass flow and temperature measurements in the flue of a woodburning appliance, 12:11517 (R;US)

WOOD FUELS
Use of this term is limited to policy, feasibility, and socio-economic studies. For wood properties use WOOD.

Combustion
Costs of district heating plants using wood and peat fuels, 12:10831 (R;FI;In Finnish)
Flue gas condensation when firing wood in single-family houses, 12:11536 (R;SE;In Swedish)

WOOD OILS
Catalytic Cracking
Hydrodeoxygenation of wood-derived liquids to produce hydrocarbon fluids, 12:11003 (J;US)
Hydrogenation
Hydrodeoxygenation of wood-derived liquids to produce hydrocarbon fluids, 12:11003 (J;US)

WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Automation
Marketing perspectives of automation systems for production and usage of energy in wood processing industry, preliminary study, 12:11568 (R;FI;In Finnish)
Energy Consumption
Utilization of mechanical compression of steam in large-scale industry, 12:11567 (R;FI;In Finnish)
Process Control
Marketing perspectives of automation systems for production and usage of energy in wood processing industry, preliminary study, 12:11568 (R;FI;In Finnish)

WOOD WASTES
Resource Assessment
Biomass for liquid fuels in the 201-county Tennessee Valley Region, 12:11055 (R;US)

WOOD-FUEL POWER PLANTS
Feasibility Studies
Honey Lake Hybrid Power Plant Project. Volume 1. Executive summary, 12:11092 (R;US)

WORKERS
See PERSONNEL

WORKING FLUIDS
Equations of State
An equation of state for isobutane-isopentane mixtures with corrections for impurities[1], 12:11741 (J;US)
Thermodynamic Properties
Special topics, 12:11724 (RA;US)

WORLD
See EARTH PLANET

WWER TYPE REACTORS
See also BOHUNICE V-2 REACTOR
MOCHOVCE-1 REACTOR
WWER-3 REACTOR
Fuel Cans
Problems of waterside corrosion of VVER clads, 12:11226 (RA;XA)
Primary Coolant Circuits
Transfer of radioactive corrosion products in the primary circuit of the WWER-440, 12:11230 (RA;XA)

WWER-3 REACTOR
Neutron Fluence
Use of niobium for accurate relative fast neutron fluence measurements at the pressure vessel in a WWER-440 NPP, 12:11222 (RA;DD)
Pressure Vessels
Use of niobium for accurate relative fast neutron fluence measurements at the pressure vessel in a WWER-440 NPP, 12:11222 (RA;DD)

WWER-440 REACTOR
See WWER-3 REACTOR

X

XENON
Crystal Structure
X-ray study of xenon to 23 GPa, 12:11677 (J;GB)

XENON 131
Particle Discrimination
Evaluation of a high-pressure proportional counter for the detection of radioactive noble gases. Final report, 12:12195 (R;US)

XENON 131 TARGET
Pion Minus Reactions
Experimental investigations of the particle production process at the stage before the decay of resonances, 12:12718 (R;SU)

XENON 133
Particle Discrimination
Evaluation of a high-pressure proportional counter for the detection of radioactive noble gases. Final report, 12:12195 (R;US)

X-RASERS
See X-RAY LASERS

X-RAY DIFFRACTION
X-ray reflection from novel multilayers with variable smoothness and figure: Final technical report for the period 1 April 1984-15 May 1986, 12:12201 (R;US)

X-RAY DIFFRACTOMETERS
Performance
High temperature guinier x-ray diffractometry for thermal expansion measurements in the hexagonal form of cordierite (2MgO2Al3"O3#5SiO3"), 12:11702 (BA;US)

X-RAY DOSIMETRY
Si Semiconductor Detectors
Portable x-ray spectrometer/dosemeter based on a silicon diode, 12:12204 (R;US)

X-RAY EQUIPMENT
Safety Standards
X-ray safety at the Los Alamos National Laboratory, 12:12857 (R;US)

X-RAY FLUORESCENCE ANALYSIS
Computers
Microcomputers in radionuclide X-ray fluorescence analysis, 12:11772 (RA;CS;In Czech)

X-RAY LASERS
Design
Population inversion and gain measurements for soft x-ray laser development in a magnetically confined plasma column. Final progress report, 1 November 1983-30 September 1985, 12:11952 (R;US)
Laser Cavities
Soft x-ray laser cavities, 12:11963 (R;US)
Uses
Prospects for x-ray laser applications, 12:11964 (R;US)

X-RAY SPECTRA
Bremsstrahlung
Energy dependence of axial coherent bremsstrahlung at low accelerating voltages, 12:12584 (R;US)

X-RAY SPECTROMETERS
Coatings
The characterization of multilayers analyzers: Models and measurements, 12:11799 (BA;US)

X-RAY SPECTROSCOPY
Backscattering
Improved determination of backscattering amplitude and phase shift functions, 12:11749 (R;US)
Research Programs
Development of an x-ray beam line at the NSLS for studies in materials science using x-ray absorption spectroscopy: Annual progress report, 12:12145 (R;US)
Si Semiconductor Detectors
Portable x-ray spectrometer/dosemeter based on a silicon diode, 12:12204 (R;US)

XYLENOLS
Anaerobic Digestion
Anaerobic SBR [Sequencing Batch Reactor] treatment of coal conversion wastewaters: Fifth quarterly report, 12:10757 (R;US)

Y

Y-12 PLANT
Geology
Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805, 12:12536 (R;US)
Ground Water
Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805, 12:12536 (R;US)
Hydrology
Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805, 12:12536 (R;US)
Waste Disposal
Fiscal year 1985 groundwater investigation drilling program at the Y-12 Plant, Oak Ridge, Tennessee: Environmental Sciences Division publication No. 2805, 12:12536 (R;US)
YANG-MILLS THEORY
Lattice Field Theory
Yang-Mills vacuum: An attempt of lattice loop calculus, 12:12666 (R;US)
Quantization
How to quantize supersymmetric theories, 12:12670 (R;SU)
SU-2 Groups
How to quantize supersymmetric theories, 12:12670 (R;SU)
Supersymmetry
How to quantize supersymmetric theories, 12:12670 (R;SU)
Vacuum States
Yang-Mills vacuum: An attempt of lattice loop calculus, 12:12666 (R;US)
Wilson Loop
β-function in supersymmetric Yang-Mills theory, 12:12686 (J;NL)
YANKEE CONNECTICUT REACTOR
See CONNECTICUT YANKEE REACTOR
YANKEE ROWE REACTOR
See ROWE YANKEE REACTOR
YELLOW CAKE
See URANIUM OXIDES U3O8
YEREVAN SYNCHROTRON
See EREVAN SYNCHROTRON
YTTRIUM
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
YTTRIUM 99
Energy Levels
Deformation in odd-mass nuclei near A $\sim$100: one- and three-quasiparticle Nilsson states in $_{30}{}^{69}Y_{69}$, 12:12729 (J;NL)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YUCCA MOUNTAIN
Tuff
Chemistry of diagenetically altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nye County, Nevada, 12:12558 (R;US)

Z

ZEA MAYS
See MAIZE
ZEOLITES
See also CLINOPTILOLITE
MORDENITE
Catalytic Effects
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Infrared Spectra
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
Sorptive Properties
Cation promotion effect in zeolite-supported F-T catalysts: Final report, 12:10717 (R;US)
Engineered sorbent barriers for low-level waste disposal, 12:10951 (R;US)
Kinetics and FTIR studies of hydrocarbon synthesis on Pd/ZSM5 catalysts. Final report, 12:10720 (R;US)
ZINC
Ecological Concentration
An investigation of trace metals in the aqueous environment: Progress report for the period January 1986 through December 1986, 12:12333 (R;US)
Environmental Transport
Trace element and salt movement in retorted oil shale disposal sites, 12:10899 (J;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
ZINC 65 TARGET
Neutron Reactions
Burn-up cross sections of /sup 51/Cr, /sup 59/Fe, /sup 65/Zn, /sup 86/Rb, /sup 103/Ru, 12:12711 (BA;US)
ZINC IONS
Solvent Extraction
Interfacial chemistry in solvent extraction systems: Progress report for period April 1, 1986-March 31, 1987, 12:11751 (R;US)
ZINC OXIDES
Sorptive Properties
Picosecond pump-probe experiments on surface-adsorbed dyes: ground-state recovery of rhodamine 640 on ZnO and fused silica, 12:11874 (J;US)
ZINC SULFIDES
Chemical Vapor Deposition
The preparation of thin films for photovoltaic conversion by novel MOCVD [metallorganic chemical vapour deposition] techniques: Annual subcontract report, 15 February 1985-15 April 1986, 12:11047 (R;US)
ZINC-CHLORINE BATTERIES
Reliability
Reliability, availability, and maintainability assessment of a Zinc Chloride Battery System: Final report, 12:11420 (R;US)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Zion, Illinois, USA
Computerized Control Systems
On-line confirmation of Zion plant variables, 12:11343 (RA;US)
Reactor Cores
Analysis of core damage frequency from internal events: Zion Unit 1, 12:11402 (R;US)
Reactor Safety
Analysis of core damage frequency from internal events: Zion Unit 1, 12:11402 (R;US)
On-line confirmation of Zion plant variables, 12:11343 (RA;US)
ZION-2 REACTOR
Zion, Illinois, USA
Computerized Control Systems
On-line confirmation of Zion plant variables, 12:11343 (RA;US)
Computerized Simulation
Comparison of QUANDRY and PDQ analysis of Zion Unit 2, Cycle 1: Final report, 12:11221 (R;US)
Reactor Physics
Comparison of QUANDRY and PDQ analysis of Zion Unit 2, Cycle 1: Final report, 12:11221 (R;US)

Reactor Safety
On-line confirmation of Zion plant variables, 12:11343 (RA;US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
ZIRCALOY 4
Corrosion
Evaluation of and improvements in the performance of zircaloy cladding during and after its residence in water cooled nuclear power reactors, 12:11210 (RA;XA)
Justification of in-plant waterside corrosion of Zircaloy clad on the basis of thermal and hydraulic calculations, 12:11213 (RA;XA)
Fuel Cans
Transient failure of zircaloy cladding: State-of-the-art study and model development: Final report, 12:11373 (R;US)
ZIRCALOY 2
Corrosion
Effect of impurity elements on corrosion behavior of Zircaloy in high temperature steam, 12:11214 (RA;XA)
Influence of second phase particles on the nodular corrosion of Zircaloy-2, 12:11211 (RA;XA)
Impurities
Effect of impurity elements on corrosion behavior of Zircaloy in high temperature steam, 12:11214 (RA;XA)
Stresses
Use of time-of-flight neutron diffraction to study grain interaction stresses, 12:11678 (J;US)
ZIRCALOY 4
Corrosion
Effect of impurity elements on corrosion behavior of Zircaloy in high temperature steam, 12:11214 (RA;XA)
Long time out of pile corrosion of Zircaloy-4 in 350°C water, 12:11212 (RA;XA)
Waterside corrosion of Zircaloy-4 in nucleate boiling conditions, 12:11227 (RA;XA)
Impurities
Effect of impurity elements on corrosion behavior of Zircaloy in high temperature steam, 12:11214 (RA;XA)
ZIRCON
Leaching
Investigations on microbial leaching of zircon by means of spark source mass spectrometry, 12:11789 (RA;DD;In German)
Thiobacillus Ferrooxidans
Investigations on microbial leaching of zircon by means of spark source mass spectrometry, 12:11789 (RA;DD;In German)
ZIRCONIUM
Neutron Transport
Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr, 12:12728 (BA;US)
Thermionic Emission
Study of the enhanced thermionic emission of molybdenum, hafnium and zirconium due to dispenser-cathode exposure. Final report, September 1982-September 1985, 12:11598 (R;US)
X-Ray Fluorescence Analysis
Geochemical behavior of trace elements in sediments from the Mariana Pimentel-Faxinal area, Guaiba municipality, state of Rio Grande do Sul, Brazil , 12:11755 (R;BR;In Portuguese)
ZIRCONIUM 90 TARGET
Carbon 12 Reactions
Total reaction cross section for /sup 12/C on /sup 12/C, /sup 40/Ca, /sup 90/Zr, and /sup 208/Pb between 10 and 35 MeV/nucleon, 12:12707 (J;US)
Pion Minus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
Pion Plus Reactions
Isovector resonances in pion charge exchange, 12:12712 (BA;NL)
ZIRCONIUM 91 TARGET
Neutron Reactions
Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr, 12:12728 (BA;US)
ZIRCONIUM 95
Radioecological Concentration
Observations and sampling by EML in Sweden, with preliminary gamma-ray spectrometric data, 12:12270 (RA;US)
Radiochemical characterization of Chernobyl fallout in Europe, 12:12269 (RA;US)
ZIRCONIUM 96 TARGET
Neutron Reactions
Accurate determination of the parameters of the 292.4-eV resonance of /sup 91/Zr and the 301.1-eV resonance of /sup 96/Zr, 12:12728 (BA;US)
ZIRCONIUM ALLOYS
Corrosion
Experimental corrosion tests of Zr-Nb cladding material, 12:11228 (RA;XA)
Creep
The effect of electron beam welding on the creep rupture properties of a Nb-Zr-C alloy (Nb-1Zr-0.1C (PWC-11)), 12:11615 (R;US)
Electron Beam Welding
The effect of electron beam welding on the creep rupture properties of a Nb-Zr-C alloy (Nb-1Zr-0.1C (PWC-11)), 12:11615 (R;US)
Mechanical Properties
Mechanical property measurements on ion-irradiated metals, 12:11638 (R;US)
ZIRCONIUM COMPLEXES
Chemical Preparation
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of {$ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]]_2$, 12:11864 (J;US)
Structural Chemical Analysis
Dialkyl bis[bis(trimthylsilyl)amido] Group 4A metal complexes. Preparation of bridging carbene complexes by γ elimination of alkane. Crystal structure of {$ZrCHSi(Me)_2NSiMe_3[N(SiMe_3)_2]]_2$, 12:11864 (J;US)
ZIRCONIUM COMPOUNDS
See also ZIRCONIUM OXIDES
Nuclear Magnetic Resonance
Deuteron magnetic resonance in a-Zr_3PdD /SUB 2.9/ , 12:11694 (BA;US)
Photoelectron Spectroscopy
Photoelectron spectra of metal tetrakis(methyltrihydroborates) and thorium tetrakis(tetrahydroborate), 12:11897 (J;US)
ZIRCONIUM OXIDES
Erosion
Particle erosion of yttria-stabilized zirconia porous coatings, 12:11690 (J;US)
Ionic Conductivity
Defect structure, ionic conductivity, and diffusion in yttria-stabilized zirconia and related oxide electrolytes with fluorite structure, 12:11684 (R;US)
ZONE MELTING
Comparative Evaluations
Potential productivity benefits of float-zone vs Czochralski crystal growth, 12:11032 (RA;US)
ZONES (AURORAL)
See AURORAL ZONES
ZONES (RIFT)
See RIFT ZONES
ZYMOMONAS MOBILIS
Genetic Engineering
Transfer of plasmids to an antibiotic-sensitive mutant of Zymomonas mobilis, 12:12354 (J;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	Abstract No.	Report No.

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form DE82000001 or TI82000001 appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the document quality for microfiche (MF) and printed copy (PC) production: 1 = 92 to 95% legibility, available PC and MF; 2 = 88 to 91% legibility, available MF only; 3 = 87% or less legibility, available PC only. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE87003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) and other price codes are for domestic users; prices for foreign purchasers are, in most instances, twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($6.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for PR-360-4.

U. S. DEPARTMENT OF COMMERCE

National Technical Information Service

5285 Port Royal Road, Springfield, Virginia 22161

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 87-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

DOE CURRENT AWARENESS BULLETINS

TIMELY INFORMATION FOR RESEARCHERS IN SPECIALIZED SUBJECT AREAS

To keep science, industry, the government, and the public up to date on worldwide energy literature, the DOE Office of Scientific and Technical Information publishes a series of Current Awareness Bulletins on various aspects of energy production and use. The information abstracted in these bulletins comes from scientific and technical reports, journal articles, conference papers and proceedings, patents, theses, books, and monographs. The semimonthly bulletins are:

ACID PRECIPITATION (PB87-901000) Wet and dry deposition, long-range transport, environmental effects, modeling, and socioeconomic factors.

BUILDINGS ENERGY TECHNOLOGY (PB87-900700) Technology required for economic energy conservation in buildings of all types.

COAL-BASED SYNFUELS (PB87-901400) Conversion of coal to gaseous or liquid fuels.

COAL COMBUSTION AND UTILIZATION (PB87-914400) All aspects of coal combustion and direct utilization, including fluidized-bed combustion, MHD generators, and coal fuel cells.

COAL PREPARATION AND POLLUTION CONTROL (PB87-900800) Coal cleaning and the technology of reducing air pollution from the direct combustion of coal.

DIRECT ENERGY CONVERSION (PB87-946600) Photovoltaic conversion, magnetohydrodynamics, electrohydrodynamics, thermoelectric generators, thermionic converters, fuel cells, etc.

ENERGY FROM BIOMASS (PB87-900600) Biomass production, conversion, and use for energy.

GEOTHERMAL ENERGY TECHNOLOGY (PB87-914700) Technology required for economic recovery of geothermal energy and its use, either directly or to produce electricity.

HEAVY-ION REACTIONS (PB87-900500) All aspects of heavy-ion ($A > 4$) reactions.

LASER RESEARCH (PB87-901100) Research and development, excluding applications.

NUCLEAR FUEL CYCLE (PB87-913400) Uranium reserves, ore exploration, mining, processing, and enrichment; spent-fuel reprocessing; nuclear materials management and safeguards; nuclear fuel fabrication and properties; and environmental and health and safety aspects.

NUCLEAR REACTOR SAFETY (PB87-913500) Accident analysis, safety systems, radiation protection, decommissioning and dismantling, and security measures.

RADIOACTIVE WASTE MANAGEMENT (PB87-902900) Spent-fuel transport and storage, radioactive effluents from nuclear facilities, techniques of processing radioactive wastes, and ultimate disposal of the wastes.

SOLAR THERMAL ENERGY TECHNOLOGY (PB87-901200) Research and development relating to the use of solar thermal systems as a significant energy source.

TRANSPORTATION ENERGY RESEARCH (PB87-900900) Engineering and design of energy-efficient automotive propulsion systems and all aspects of energy conservation in transportation.

UNCONVENTIONAL PETROLEUM (PB87-901300) Secondary and tertiary recovery of petroleum and oil shales and tar sands.

Bulletins are available by subscription from the National Technical Information Service, U. S. Department of Commerce, Springfield, VA 22161. Subscription rates for one year (24 issues) are $80.00 for domestic subscribers and $160.00 for subscribers outside the United States, Canada, and Mexico. Use the order number given in parentheses after the bulletin title.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
